Content.....	2
Foreword .....	9
About this manual .....	9
Chapter One Overview of functions .....	10
1.1. Start Project Screen .....	10
1.2. Select Format Screen .....	11
1.3. The Menu Bar .....	14
1.3.1. File Menu .....	14
1.3.2. Edit Menu .....	16
1.3.3. Scroll Menu.....	17
1.3.4. Edit View Menu.....	18
1.3.5. Timeline Menu .....	19
1.3.6. Window Menu.....	20
1.3.7. Help Menu .....	21
1.3.8. Object Toolbar .....	21
1.3.9. Effect Toolbar .....	22
1.4. Text Editor Toolbar .....	22
1.5. Layout List .....	24
1.6. Graphics (still) Editing Mode .....	25
1.6.1. Control Panel .....	26
1.6.2. Edit View Toolbar .....	27
1.7. Effect Editing Screen .....	27
1.7.1. Right-Click Menu of Each Effect .....	28
1.7.2. Effect View Toolbar .....	30
1.8. Properties Window .....	32
1.8.1. Property Tab .....	32
1.8.2. Shader Tab .....	33
1.8.3. Effect Tab .....	35
1.8.4. Text Tab .....	36
1.8.5. Roll/Crawl Tab .....	39
1.9. Timeline Window .....	39
1.10. Template Library .....	44
1.11. System Library .....	47
Chapter Two Create Object.....	50
2.1. Operation flow .....	50
2.2. Shapes .....	51
2.3. Bezier Curve .....	54
2.4. Paintstroke .....	55
2.5. Image .....	56
2.6. Animation .....	59
2.7. Horizontal/Vertical Text .....	60

2.8. Morph Text.....	63
2.9. Curve Text.....	65
2.10. Clock Object .....	67
2.11. Number Object .....	69
2.12. Timecode .....	71
2.13. Date Object .....	73
2.14. Flag .....	75
2.15. Object Group .....	77
2.16. Path Group .....	78
2.17. PathGroup to Object .....	81
Chapter Three Applying Shader .....	83
3.1. Shader Properties .....	83
3.1.1. Colors .....	83
3.1.2. Texture .....	89
3.1.3. Linear Sheen .....	89
3.1.4. Bitmap Sheen .....	90
3.1.5. Bump Bitmap .....	90
3.1.6. Concave .....	91
3.1.7. Bevel .....	91
3.2. Face .....	92
3.3. Edge .....	92
3.4. Shadow .....	93
3.5. Depth .....	94
3.6. Frame .....	95
3.7. Advanced properties .....	96
3.8. Editing properties .....	98
3.8.1. Combinations .....	98
3.8.2. Preset Styles .....	100
3.9. Shader Template Library .....	101
3.10. Render Text .....	104
3.11. Render Image .....	104
Chapter Four Graphics (Still) Editing Mode .....	106
4.1. Position, Scale, Rotate .....	106
4.2. Make Group, Ungroup .....	108
4.3. Boolean .....	109
4.4. Object level .....	111
4.5. Mix Option .....	111
4.6. Align .....	113
4.7. Smart Borders .....	119
Chapter Five Applying effects .....	122
5.1. 3D Transform .....	122
5.1.1. Displacement.....	122
5.1.2. Scale .....	123
5.1.3. Rotate .....	123

5.1.4. Pivot .....	123
5.1.5. Transparency .....	124
5.2. Applying 3D Transform .....	124
5.3. Keyframing .....	126
5.4. Create Freehand Path .....	129
5.5. Create Bezier Path .....	130
5.6. Create Ellipse Path .....	131
5.7. Effect composition .....	132
5.8. Effect Templates Library .....	133
5.9. Text effect .....	134
5.9.1. Setting play area .....	134
5.9.2. Play Frequency and Duration .....	136
5.9.3. Play Whole Text .....	137
5.9.4. Play In/Out by Letter .....	137
5.9.5. Play In/Out by Line .....	138
5.9.6. Random In/Out Text .....	139
5.10. Object Group Effect .....	141
5.10.1. Setting Play Area .....	141
5.10.2. Play as Group .....	142
5.10.3. Play as Child .....	142
5.11. Setting Stay Area .....	143
5.11.1. Setting Stay Area for Title .....	143
5.11.2. Setting Stay Area for Subtitle .....	144
Chapter Six Create Roll/Crawl .....	146
6.1. Operation flow .....	146
6.2. Create 3D roll/crawl .....	150
6.3. Other parameters .....	151
6.3.1. Fade In/Out .....	151
6.3.2. Scroll Area .....	151
6.3.3. Speed down .....	152
Chapter Seven Dynamic Texture .....	153
7.1. Applying Dynamic Texture .....	153
7.2. Rendreing .....	155
7.3. Examples .....	155
Chapter Eight Applying Settings .....	157
8.1. Project File Setting .....	157
8.2. Default Setting .....	158
8.3. User Interface .....	159
8.4. Text Setting .....	160
8.5. File Path Settings .....	161
8.6. Background Setting .....	161
8.6.1. Solid Color .....	162
8.6.2. Grid Color .....	162
8.6.3. Image Background .....	162

8.6.4. Background Template .....	162
8.7. 3D View Edit Settings .....	163
8.8. Keyboard Shortcut .....	164
8.9. Language Setting .....	164
Chapter Nine Layout Export .....	166
9.1. Export Current Layout as Picture .....	166
9.2. Export Current Frame as Picture .....	167
9.3. Export Current Layout as Movie .....	168
9.4. Export Current Layout as Image Sequence .....	170
9.5. Export Current Layout as QuickTime Movie .....	171
9.6. Export Layout to AVI Animation .....	172
9.7. Export Project include reference files .....	173
Chapter Ten Examples .....	175
10.1. Create Title .....	175
10.1.1. Text .....	175
10.1.2. Liner .....	182
10.1.3. Make Group .....	184
10.1.4. Fade In/Out Animation .....	184
10.1.5. Preview .....	188
10.2. Create Effect Title .....	189
10.2.1. Text .....	189
10.2.2. Liner .....	190
10.2.3. Make Group .....	193
10.2.4. Create Effect Animation .....	194
10.2.5. Preview .....	199
10.3. Create Button .....	200
10.3.1. Draw Circle .....	201
10.3.2. Draw Reflection .....	203
10.4. Create Custom Shape .....	205
10.4.1. Draw Leaf .....	205
10.4.2. Draw Apple .....	207
10.4.3. Shader .....	209
10.5. Create Play by Character .....	211
10.5.1. Enter Text and Shader .....	212
10.5.2. Add Area .....	213
10.5.3. Set Keyframe in 3D Transform .....	214
10.5.4. Preview .....	217
10.6. Create Play by Line .....	219
10.6.1. Enter Text and Shader .....	219
10.6.2. Add area .....	220
10.6.3. Set Keyframe in 3D Transform .....	222
10.6.4. Preview .....	226
10.7. Create Mixed Play by Character/Line .....	227
10.7.1. Enter Text and Shader .....	227

10.7.2. Add area .....	228
10.7.3. Set Keyframe in 3D Transform .....	229
10.7.4. Preview .....	233
10.8. Create Advanced Animation Keyframe .....	233
10.8.1. Create Cloud .....	234
10.8.2. Create Raindrop .....	237
10.8.3. Set Raindrop Animation Keyframe .....	239
10.8.4. Preview .....	241
10.9. Create Progress Bar .....	243
10.9.1. Liner .....	243
10.9.2. Color .....	243
10.9.3. Merge progress bar and high-light .....	244
10.9.4. Percentage Animation .....	246
10.9.5. Preview Animation .....	246
10.10. Create Roll Up .....	247
10.11. Create Crawl .....	247
10.11.1. Crawl Left .....	247
10.11.2. Create Text .....	247
10.11.3. Set Parameters .....	248
10.12. Render Image .....	249
10.13. Using 3ds max animation in VisTitle .....	254
10.13.1. Set Frame Rate and Time .....	254
10.13.2. Render Setting .....	255
10.13.3. Save Setting .....	256
10.13.4. Render Animation .....	257
10.13.5. Change Format .....	258
10.13.6. Using in VisTitle .....	260
10.14. After Effect Animation in VisTitle .....	262
10.14.1. New Composition and Composition Setting .....	262
10.14.2. Render Area .....	262
10.14.3. Render Setting .....	263
10.14.4. Change Format .....	265
10.14.5. Using in VisTitle .....	266
10.15. Combine Animation with Animated Header .....	267
10.15.1. Set Keyframe positions .....	267
10.15.2. Background and Text .....	268
10.15.3. Set position .....	272
10.15.4. Animation Preview .....	272
Chapter Eleven Plugins .....	273
11.1. Magic Composite .....	273
11.2. Text Kerning/Leading Animation .....	276
11.2.1. Kerning Animation .....	276
11.2.2. Leading Animation .....	277
11.3. Text Path Animation .....	280

11.4. Image Slide Show .....	282
11.5. 2D Stroke Animation .....	286
11.6. Image Four-point Deformation .....	292
11.7. Shadow .....	296
11.7.1. Back Shadow .....	296
11.7.2. Mirror shadow .....	301
11.7.3. Slant Shadow .....	306
11.8. 2D Vector Transform .....	312
11.9. Karaoke .....	318
11.10. Handwriting .....	324
11.10.1. Brief Introduction .....	324
11.10.2. Handwriting Interface Description .....	326
11.10.3. Paint Sketch .....	329
11.10.4. Paint Contour .....	330
11.10.5. Edit Bezier .....	331
11.10.6. Stroke Radius .....	331
11.10.7. Stroke Playing Speed .....	334
11.10.8. Edit Graph View .....	336
11.10.9. Stroke Color .....	339
11.10.10. Playing Time .....	343
11.10.11. Setting General Functions Preview area .....	344
11.10.12. Set Sync Background .....	345
11.10.13. Operation Flow of Handwriting .....	345
11.11. 3D Particle .....	353
11.11.1. Brief Introduction of 3D Particle .....	353
11.11.2. Interface Description .....	354
11.11.3. Create Emitter .....	360
11.11.4. Make Super Emitter .....	364
11.11.5. 3D Transform .....	364
11.11.6. Emitter Property .....	369
11.11.7. Particle Property .....	371
11.11.8. Particle Parameter .....	374
11.11.9. Edit Graph View .....	377
11.11.10. Set Edit Screen .....	379
11.11.11. How to Preview Particle .....	380
11.11.12. Set Background .....	381
11.11.13. Operation Flow of 3D Particle .....	383
11.12. 3D Plugin .....	388
11.12.1. Operation Differences of Three Plugins .....	388
11.12.2. Same Operation of Three Plugins .....	392
11.12.3. Preview .....	410
11.13. 3D Chart .....	412
11.13.1. Operation Flow of Still Pie Chart .....	412
11.13.2. Operation Flow of Dynamic Column Chart .....	417

Chapter Twelve Keyboard Shortcuts .....	428
Chapter Thirteen Some Questions and the Answers .....	433
13.1. How to Change Parameter Value .....	433
13.2. How to Enter Special Characters .....	434
13.3. How to Convert Character Case .....	435
13.4. How to Scale Shader Style Parameter .....	436
13.5. Scale Object Data When Video Resolution Is Changed .....	438
13.6. How to Hotkey Process Special Language .....	438
13.7. Change Arrangement of Timeline Clips .....	439

# **Foreword**

## **About this manual**

Thank you for using VisTitle! VisTitle is a product of Beijing VideoStar Shichuang Technology Co. Ltd. VisTitle is the ideal platform for use with EDIUS and is designed to help EDIUS users create text and clip files in High and Standard Definition (HD/SD) environments.

This User Manual is designed to teach users how to employ the VisTitle software and the various functions that are supported by it, including how to create television titles, how to roll titles, create title effects and much more.

If you are using Acrobat Reader to view this User Manual, we recommend that you make use of the Bookmark function.

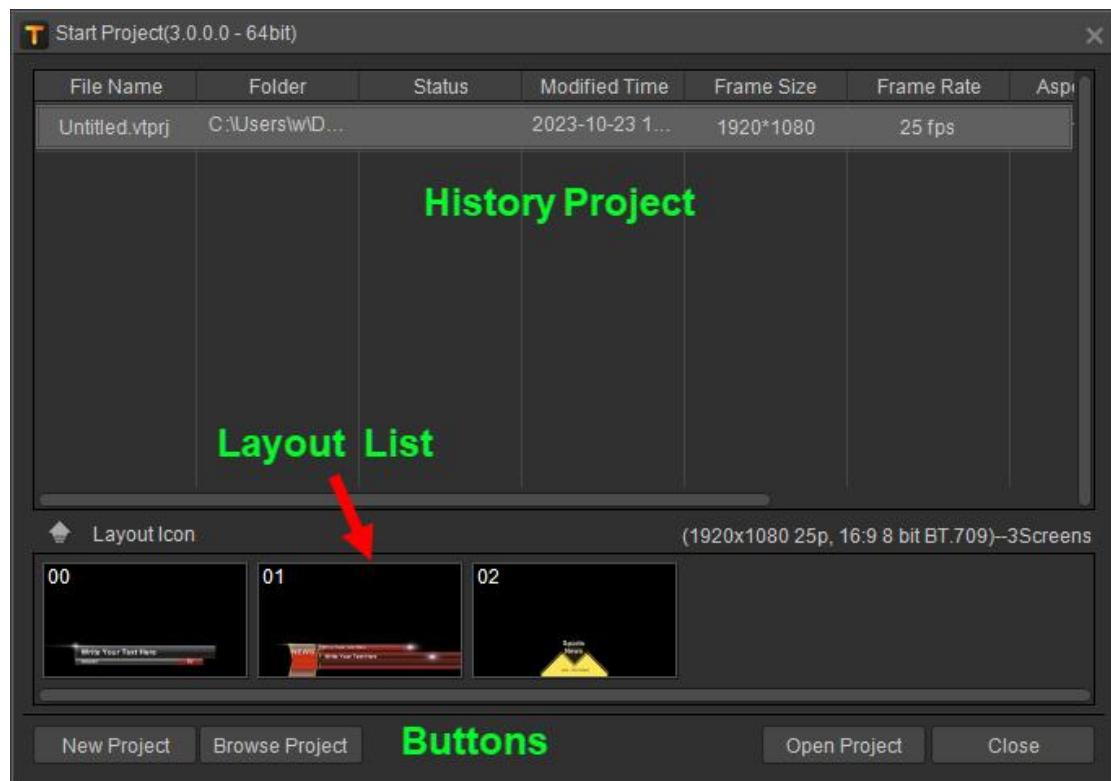

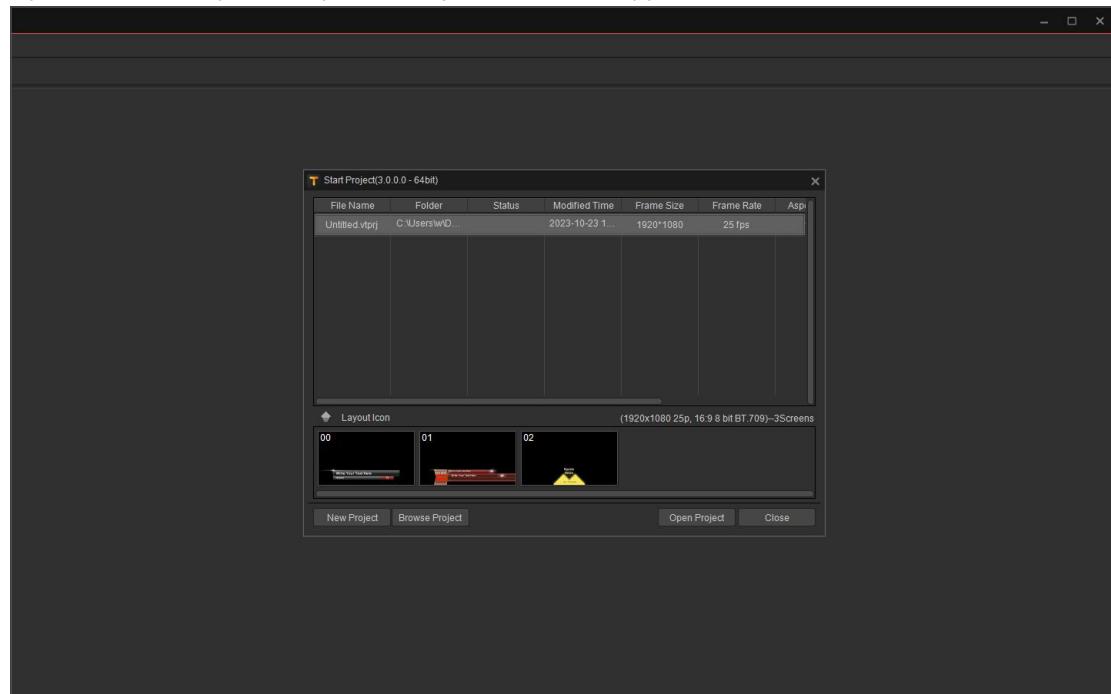

To download the latest version of this document, please log on to [www.hkvisdom.com](http://www.hkvisdom.com).

Modifications to this document will be strictly at the discretion of Videostar Company.

# Chapter One Overview of functions

## 1.1. Start Project Screen

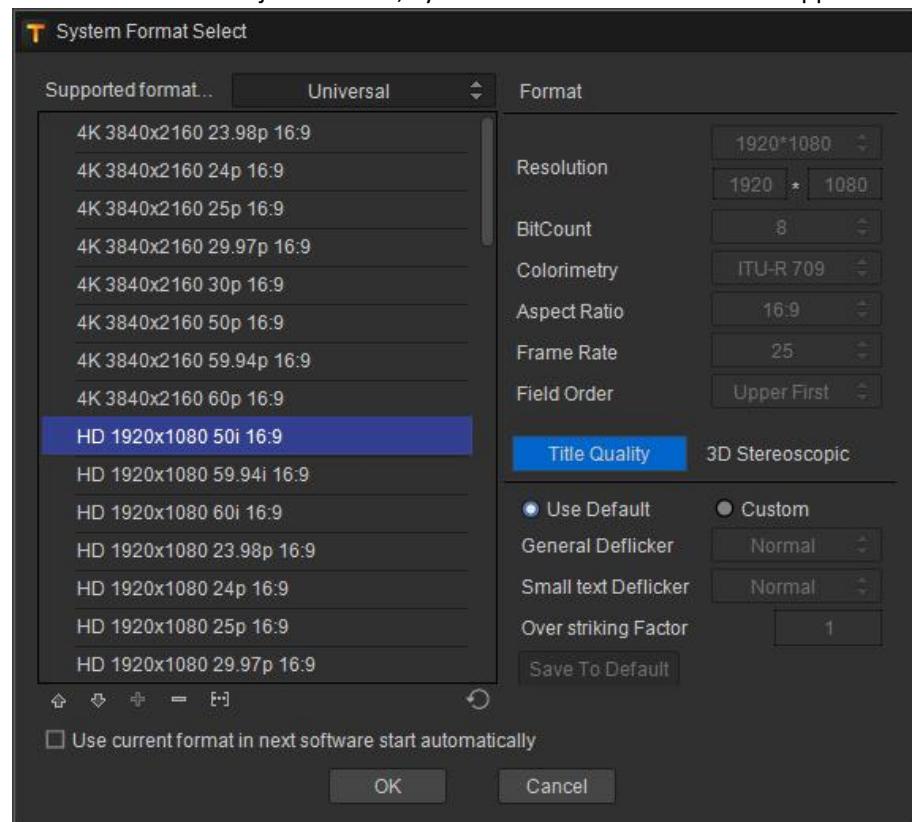

Open VisTitle independently, Start Project screen will appear.

- 1) History Project  
Show latest project.
- 2) Layout List  
Show layout list of the selected history project.
- 3) Buttons  
New Project: click the button to open System Format Select screen  
Browse Project: allows you to browse and open local project  
Open Project: allows you to open the selected history project  
Close: exit VisTitle software

## 1.2. Select Format Screen

Click on the “New Project” button, System Format Select screen will appear.

Four functions can be performed:

- 1) Choosing a format.

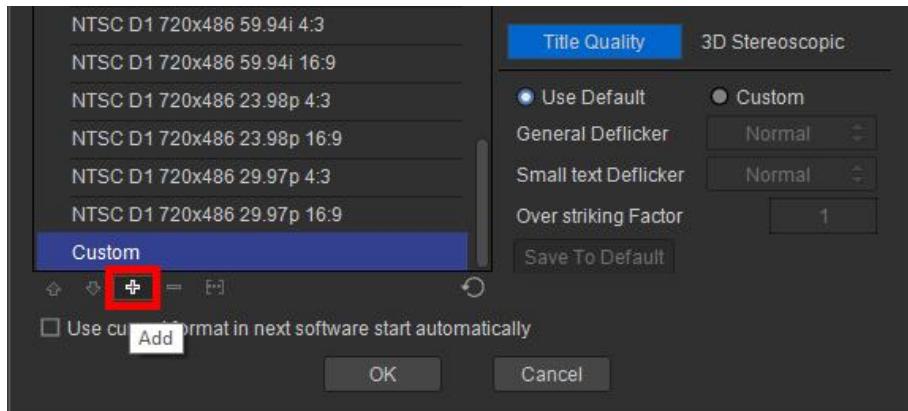

For example, PAL D1 50i or PAL Full HD 1080/50i 16:9.

**Note:** if one format is frequently used it can be set as the default format.

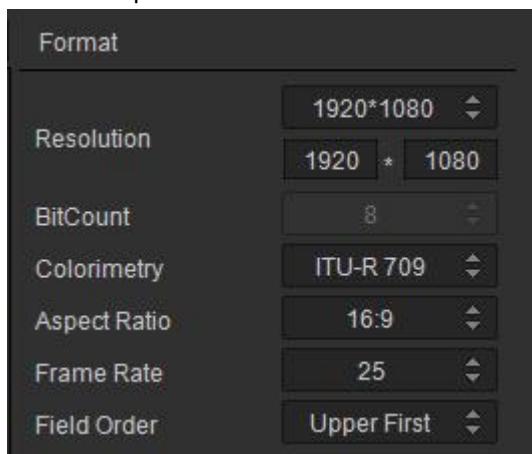

Three functions can be performed:

- 2) Add custom format

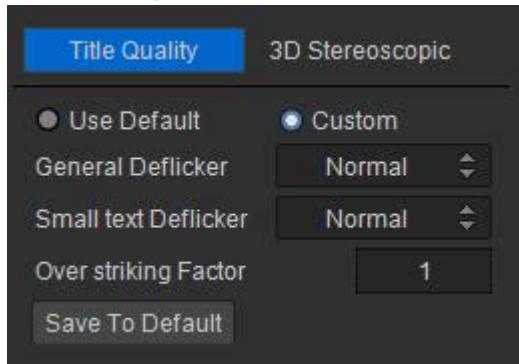

Choose “Custom” format.

Set format parameters then click the “Add” button marked in red in the image above.

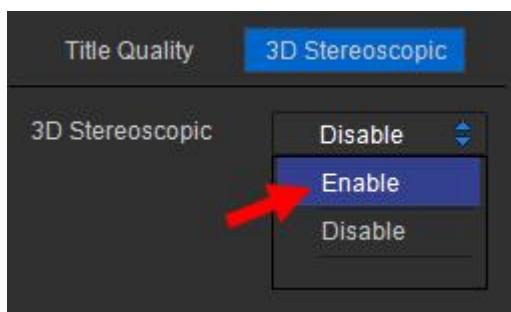

3) Set Title parameters.

Custom parameters can be set by clicking on "Custom", setting parameters, and then clicking on [Save as Default Parameters].

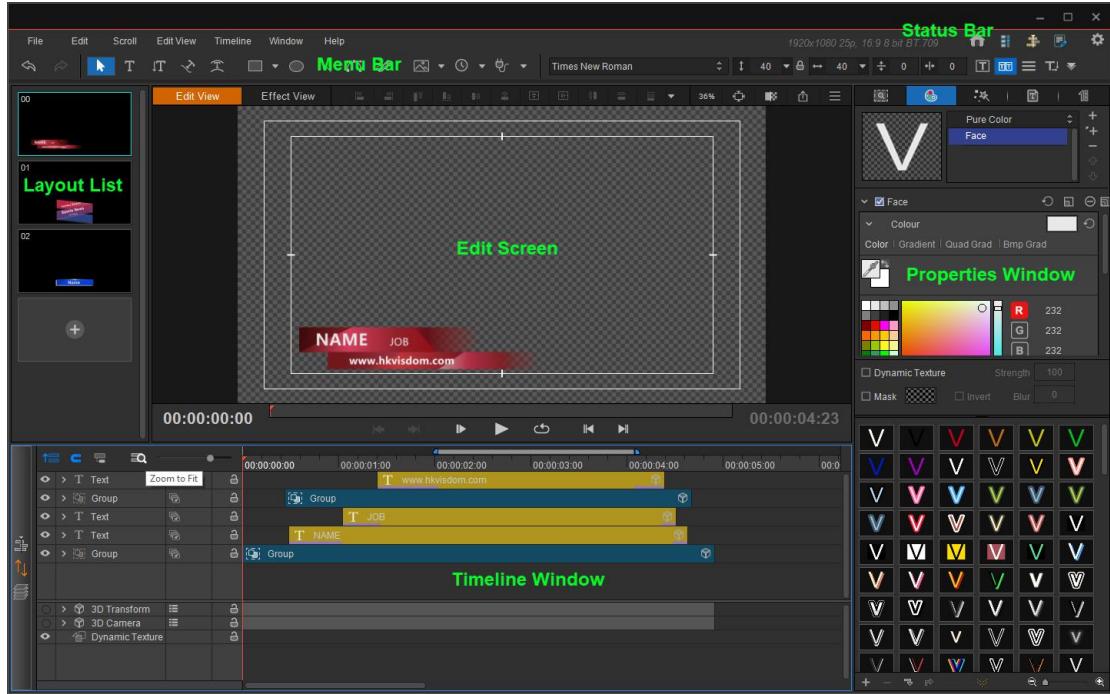

4) Enable 3D Stereoscopic

Note: If, once in VisTitle, the format needs to be changed, you can:

1. Use the shortcut **Ctrl+Shift+P**

2. Click on the [Document Settings]  button. Once the format has been chosen, click on [OK] to proceed.

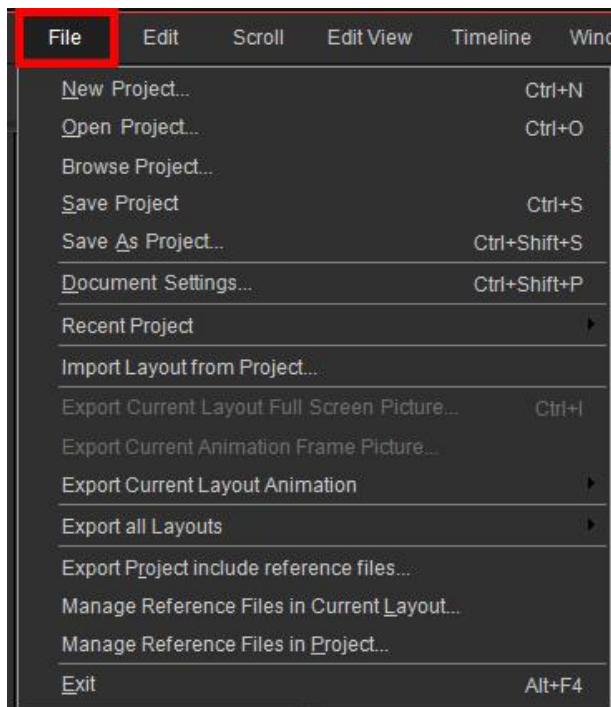

The Main Interface screen is divided into the following parts:

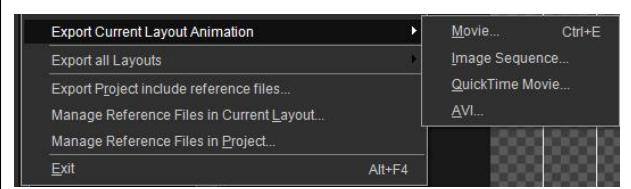

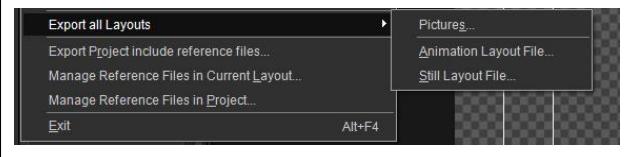

- ✧ Menu Bar - this is the main tool bar
- ✧ Layout List - lists all layouts
- ✧ Edit Screen - allows you to directly edit objects and text
- ✧ Timeline Window - shows duration items in every layout page
- ✧ Properties Window - allows you to edit the properties of objects and text
- ✧ Status Bar - provides basic layout information and interface tools

## 1.3. The Menu Bar

### 1.3.1. File Menu

New Project	create new project
Open Project	open existing project
Browse Project	allow you to browse and open local project
Save Project	save project
Save As Project	save project as [new name]
Document Settings	set project settings
Recent Project	recent projects are listed
Import Layout from Project...	Import layout from other project
Export Current Layout Full Screen Picture	export current layout as full-screen picture
Export Current Animation Frame Picture	export current frame of the movie as picture
Export Current Layout Animation	export current layout as animation (*.vxmovie file/image sequence/*.mov file/*.avi file)

	
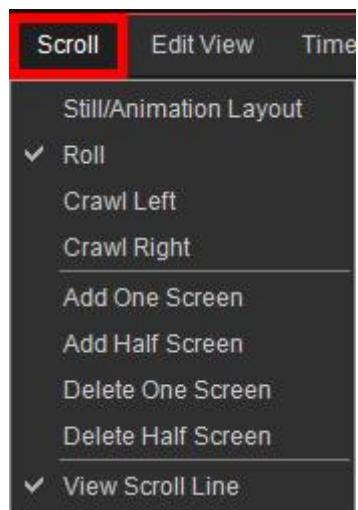

<b>Export all Layouts</b> 	Export all layouts as picture/dynamic layout file/still layout file (dynamic/still means that when the layout is dragged to EDIUS timeline, the status is dynamic or still)
<b>Export Project include reference files</b>	Export referenced files included in the project, such as image, animation, and etc.
<b>Manage Reference Files in Current Layout</b>	Manage referenced files in the current layout in reference file management interface.
<b>Manage Reference Files in Project</b>	Manage referenced files in the project in reference file management interface.
<b>Exit</b>	Exit software

### 1.3.2. Edit Menu

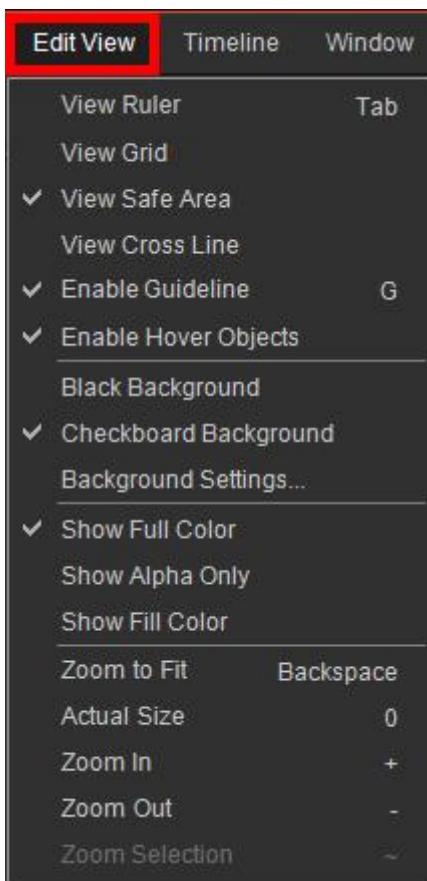

Undo	Undo action
Redo	Restore undone action
Select All	Select all objects in the layout
Make Group	Create a group of objects
Ungroup	Separate a group of objects
Up	Move selected object up
Down	Move selected object down
Move to Top	Move selected object to top
Move to Bottom	Move selected object to bottom
Mirror Vertical	Vertically mirror selected object
Mirror Horizontal	Horizontally mirror selected object
System Option	Open the system option window
Keyboard Preset	Open the shortcut key preset window

### 1.3.3. Scroll Menu

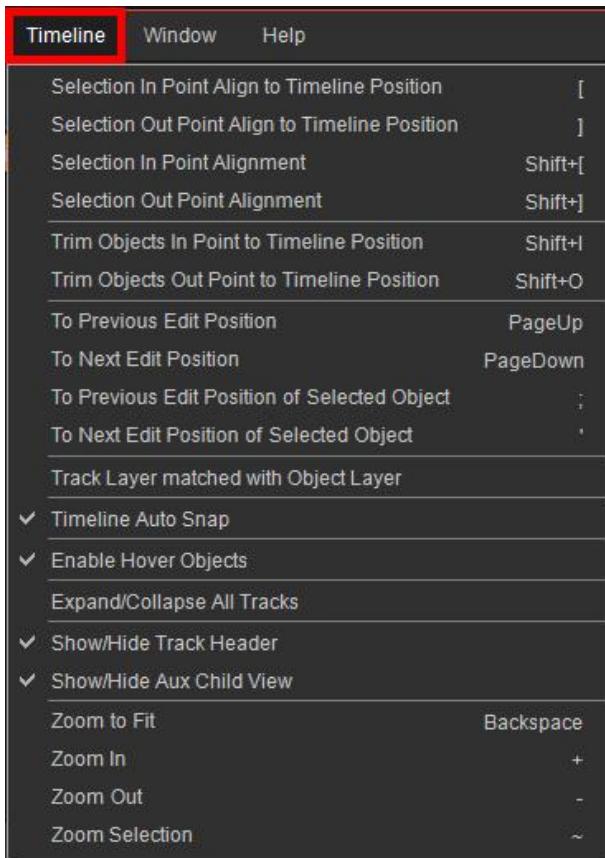

Still/Animation Layout	Set as still or animation
Roll	Set roll-to-top mode
Crawl Left	Set crawl-to-left mode
Crawl Right	Set crawl-to-right mode
Add One Screen	Add one screen
Add Half Screen	Add half screen
Delete One Screen	Delete one screen
Delete Half Screen	Delete half a screen
View Scroll Line	Show/Hide Roll/Crawl Line

### 1.3.4. Edit View Menu

View Ruler	Show/Hide Ruler
View Grid	Show/Hide Grid
View Safe Area	Show/Hide Safe Area
View Cross Line	Show/Hide Crossline
Enable Guideline	Show/Hide snap line
Enable Hover Objects	Show/Hide object hover indicator
Black Background	Set black background
Checkboard Background	Set grid background
Background Settings	Open the background settings window
Show Full Color	Show fill-in signal only
Show Alpha Color	Show Alpha signal only
Show Fill Color	Show all the color
Zoom to Fit	Zoom the edit window to fit
Actual Size	Set the editing area to actual size
Zoom In	Zoom in the edit window
Zoom Out	Zoom out the edit window
Zoom Selection	Scale the size of the selected object in the editing area

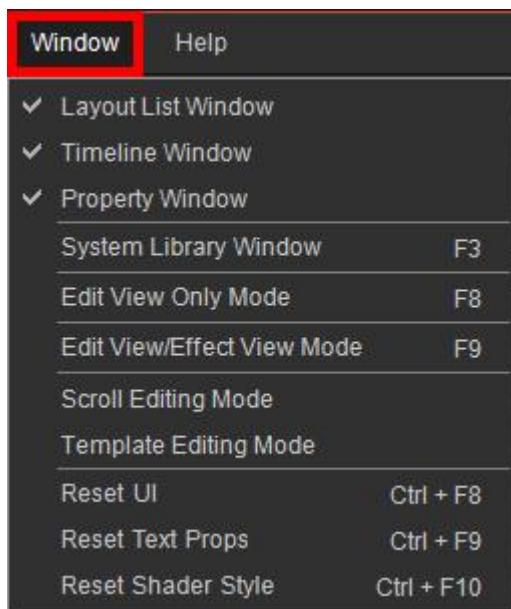

### 1.3.5. Timeline Menu

Selection In Point Align to Timeline Position	Align In Point of selected object with timeline pointer position
Selection Out Point Align to Timeline Position	Align Out Point of selected object with timeline pointer position
Selection In Point Alignment	Align multiple selected objects by the In Point on the timeline
Selection Out Point Alignment	Align multiple selected objects by the Out Point on the timeline
Trim Objects In Point to Timeline Position	Trim the In Point of the selected object to the timeline pointer position
Trim Objects Out Point to Timeline Position	Trim the Out Point of the selected object to the timeline pointer position
To Previous Edit Position	Move the timeline pointer to the previous edit position
To Next Edit Position	Move the timeline pointer to the next edit position
To Previous Edit Position of Selected Object	Move the timeline pointer to the previous edit position of the selected object
To Next Edit Position of Selected Object	Move the timeline pointer to the next edit position of the selected object

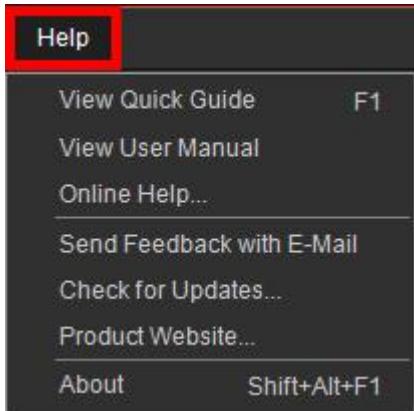

Track Layer matched with Object Layer	Make the order of track layer and object layer consistent
Timeline Auto Snap	Enable/Disable automatic snap of timeline
Enable Hover Objects	Show/hide object hover indicator
Expand/Collapse All Tracks	Expand/Collapse all the tracks
Show/Hide Track Header	Show/Hide track header
Show/Hide Aux Child View	Show/Hide the auxiliary timeline window
Zoom to Fit	Set timeline zoom to appropriate
Zoom In	Zoom in timeline
Zoom Out	Zoom out timeline
Zoom Selection	Zoom selected objects on timeline

### 1.3.6. Window Menu

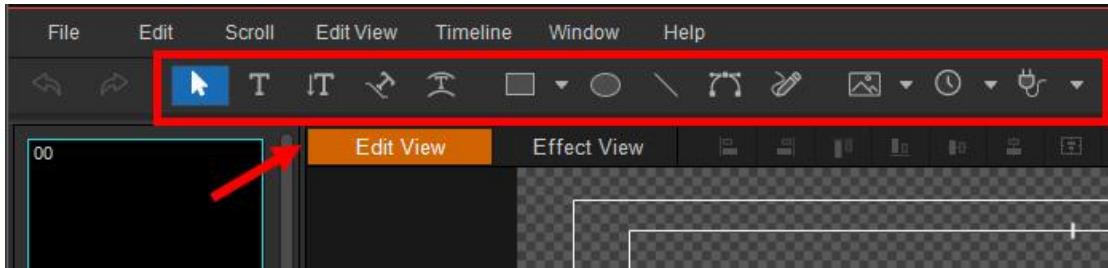

Layout List Window	Show/Hide layout list window
Timeline Window	Show/Hide timeline window
Property Window	Show/Hide property window
System Library Window	Open/Close system library window
Edit View Only Mode	Show Edit View only
Edit View/Effect View Mode	Switch between graphics and text editing mode and effect editing mode
Scroll Editing Mode	Switch to scroll editing mode
Template Editing Mode	Switch to template editing mode
Reset UI	Reset editing UI
Reset Text Props	Reset font property
Reset Shader Style	Reset coloring property

### 1.3.7. Help Menu

View Quick Guide	Open VisTitle Quick Guide
View User Manual	Open VisTitle User Manual
Online Help	Online Help
Send Feedback with E-Mail	Send feedback via Email
Check for Updates	Check if there is update available
Product Website	Open product website
About	Open About window

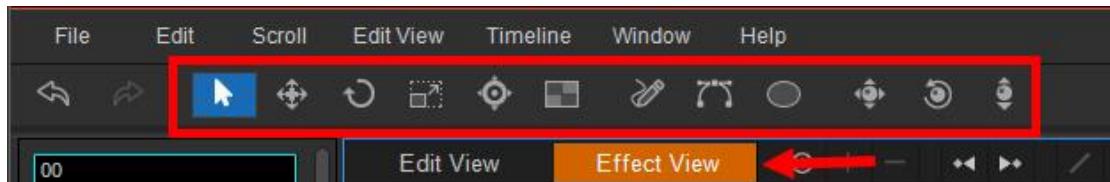

### 1.3.8. Object Toolbar

	Select: choose an item		Text: create horizontal text
	Text: create vertical text		Morph Text: create multidimensional text
	Curve Text: create curved text		Shape: create object of certain shape
	Shape: create object of circle		Line: create lines
	Bezier: create Bezier curves		PaintStroke

	Image: create image		Clock: create clock
	Title Plugin: Create Plugin object		

### 1.3.9. Effect Toolbar

	Select		Translate: move the object
	Rotate: rotate the object		Scale: adjust size
	Pivot: Enable Pivot Setting Tool		Transparency
	Create Freehand Path		Create Bezier Path
	Create Ellipse Path		Pan
	Orbit		Dolly

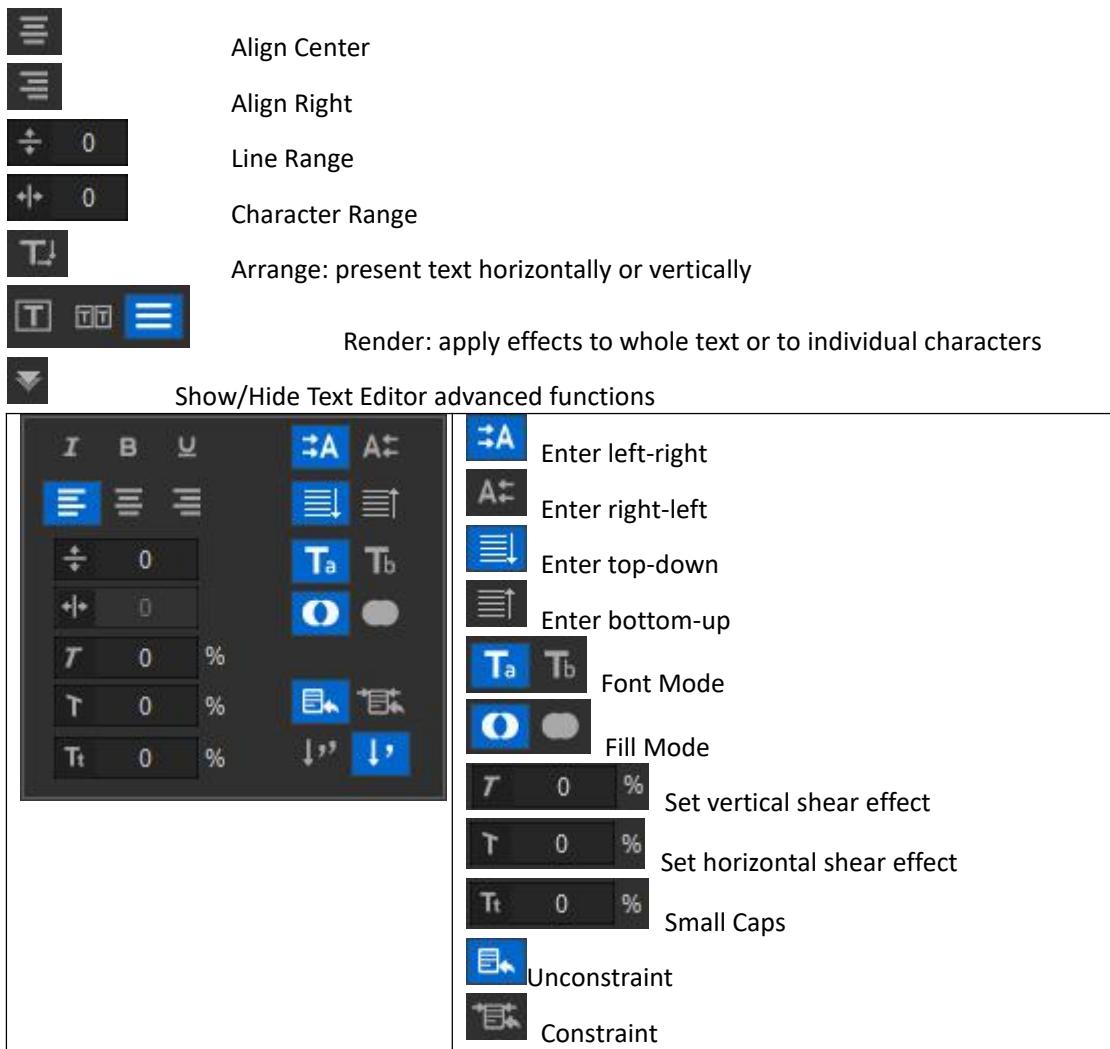

This menu will appear when shifting to Effect Mode (shortcut F10).

### 1.4. Text Editor Toolbar

The Text Editor Toolbar allows you to set text parameters:

Times New Roman  Italics Bold Underline Height Width Lock: lock height-width ratio Align Left	Font  <b>I</b> <b>B</b> <b>U</b>  Height Width  Lock: lock height-width ratio Align Left
---	--

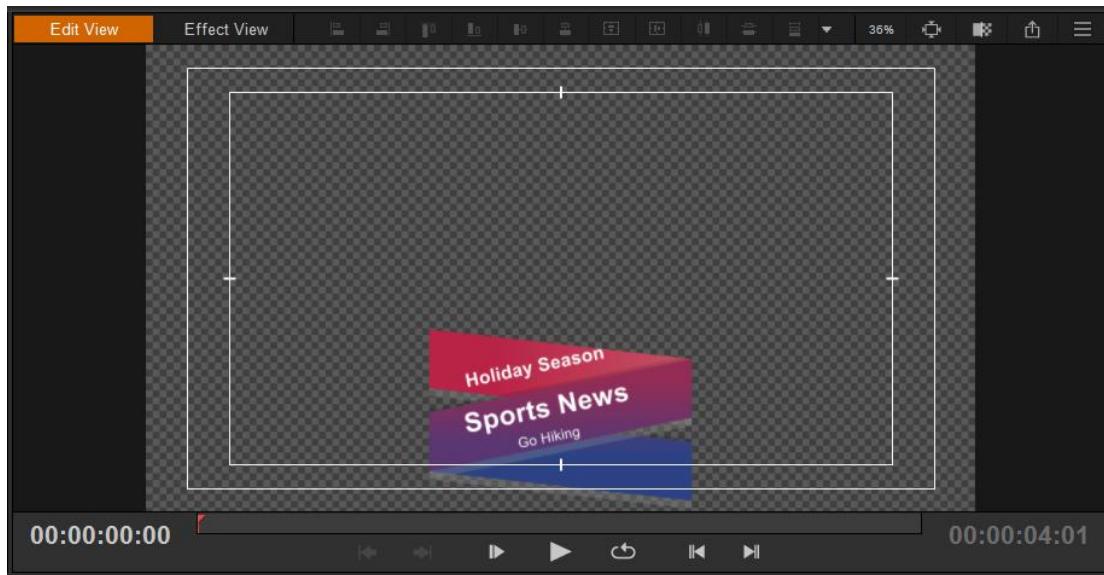

## 1.5. Layout List

	<p>Use the Layout List to quickly edit several titles. Frequent operations are:</p> <p><b>View:</b> click on a Layout to make it appear on the Edit Screen</p> <p><b>Add Layout:</b> Click  button to add layout</p> <p><b>Insert Layout:</b> Click  button to add a layout below</p> <p><b>Delete Layout:</b> Click  button to delete layout or right-click on layout and choose Delete</p>
--	--

Layout List right-click context menu:

	<p><b>Append:</b> adds layout <b>Insert:</b> inserts layout <b>Delete:</b> deletes layout <b>Copy:</b> copy layout <b>Cut:</b> cut layout <b>Paste:</b> paste layout <b>Up</b> <b>Down</b> <b>Move to Top:</b> move layout to front <b>Move to Bottom:</b> move layout to end <b>Prev Screen:</b> pageup <b>Next Screen:</b> pagedown <b>Head Screen:</b> home <b>Tail Screen:</b> end</p>
--	--

## 1.6. Graphics (still) Editing Mode

Right-click on the Edit Screen

1. The following context menu will appear

Paste Ctrl + V	Paste
Export all text of current layout to text page	Export all text of current layout to text page
View Ruler Tab	View Ruler
View Grid	View Grid
✓ View Safe Area	View Safe Area
View Cross Line	View Cross Line
✓ Enable Guideline G	Enable Guideline
✓ Enable Hover Objects	Enable Hover Objects
Black Background	Balck Background
✓ Checkboard Background	Checkboard Background
Background Settings...	Background Settings
✓ Show Full Color	Show Full Color
Show Alpha Only	Show Alpha Only
Show Fill Color	Show Fill Color

2. Object context menu

Make Group	Ctrl+G	Make Group
Ungroup	Ctrl+U	Ungroup
Up(M)	Ctrl+PageUp	Up
Down	Ctrl+PageDown	Down
Move to Top	Ctrl+Home	Move to Top
Move to Bottom	Ctrl+End	Move to Bottom
Lock/Unlock	L	Lock/Unlock
Visible/Invisible	Shift+V	Visible/Invisible
Edit	Alt+E	Edit
Cut	Ctrl+X	Cut
Copy	Ctrl+C	Copy
Paste	Ctrl+V	Paste
Delete	Delete	Delete
Paste To Group		Paste To Group
Copy Shader Style		Copy Shader Style
Paste Shader Style		Paste Shader Style
Scale ShaderStyle Parameter...		Scale ShaderStyle Parameter
Boolean	▼	Boolean
Mix Option	▼	Mix Option
Align Objects	▼	Align Objects
Center Object Pivot	Ctrl+M	Center Object Pivot
Mirror Vertical		Mirror Vertical
Mirror Horizontal		Mirror Horizontal
Reset Morph Text		Reset Morph Text
Text Block	▼	Text Block
Save Object as Picture...		Save Object as Picture

### 1.6.1. Control Panel

- Choice Head - move to the start of chosen track
- Choice Tail - move to the end of chosen track
- Play Start
- Play

The Control Panel is used to operate items placed in the timeline tracks. Functions from left to right:

## Loop - continuously replay

To Home

To End

**Left Time Code:** current play time

**Right Time Code:** total play time.

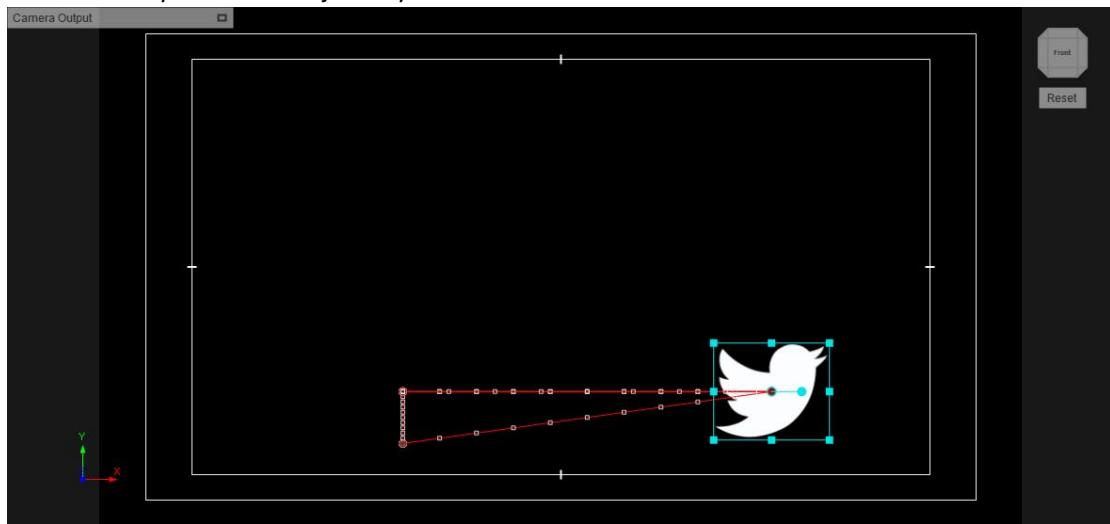

## 1.6.2. Edit View Toolbar

Edit View	Effect View		
	Switch between still Edit View and Effects View		Left-Aligned: Align selected objects to the left
	Right-Aligned: Align selected objects to the right		Top-Aligned: Top-align selected objects
	Bottom-Aligned: Bottom-align selected objects		Horizontally Center-Aligned: Align selected objects horizontally in the center
	Vertically Center-Aligned: Align selected objects vertically in the center		Align to the Screen's Center: Align selected objects to the horizontal center of the screen
	Align to the Screen's Vertical Center: Aligns selected objects to the vertical center of the screen		Horizontally Equidistant: Arrange selected objects horizontally and equidistantly
	Vertically Equidistant: Arrange selected objects vertically and equidistantly		Make Same Width: Make selected objects have the same width
	Make Same Height: Make selected objects have the same height		Make Full Screen Size: Make the selected object display in full screen
	Display ratio		Zoom to fit: Zoom to fit
	Sync Video Background with NLE: Sync video in NLE as background		Video Background: Video background
	Black Background/Checkboard Background: Switch background		Export
	Option		

## 1.7. Effect Editing Screen

Press the [Effects Editing Screen] button (or type F10) to shift from the Graphics (Still) Editing

Screen. Here you can set object keyframes.

Adjusting screen angle:

- To change angle, hold [Alt], left-click and drag mouse.
- To reset angle, hold [Alt] and double-click.

### 1.7.1. Right-Click Menu of Each Effect

When using the displacement function, right-click for the following context menu:

✓ <u>Toggle Animation</u> Alt+A	Toggle Animation
<u>Insert Keyframe</u> Ctrl+INSERT	Insert Keyframe
<u>Delete Keyframe</u> Ctrl+Delete	Delete Keyframe
<u>Go to Previous Edit Position</u> A	Go to Previous Edit Position
<u>Go to Next Edit Position</u> S	Go to Next Edit Position
<u>Reset Keyframe</u> Ctrl+R	Reset Keyframe
Reset 3D Transform	Reset 3D Transform
<u>Smooth Vertex</u>	Smooth Vertex
<u>Sharp Vertex</u>	Sharp Vertex
✓ <u>Speed Normal</u>	Speed Normal
<u>Speed Up</u>	Speed Up
<u>Speed Down</u>	Speed Down
<u>Ease in out</u>	Ease in out
<u>Set Line With Previous Keyframe</u>	Set Line With Previous Keyframe
<u>Set Line With Next Keyframe</u>	Set Line With Next Keyframe
<u>Invert Keyframe List</u>	Invert Keyframe List
<u>Uniform Keyframe List</u>	Uniform Keyframe List
<u>Reset Keyframe List</u>	Reset Keyframe List

When using the rotate function, right-click for the following context menu:

<ul style="list-style-type: none"> <li>✓ <u>Toggle Animation</u> Alt+A</li> <li><u>Insert Keyframe</u> Ctrl+INSERT</li> <li><u>Delete Keyframe</u> Ctrl+Delete</li> <li><u>Go to Previous Edit Position</u> A</li> <li><u>Go to Next Edit Position</u> S</li> <li><u>Reset Keyframe</u> Ctrl+R</li> <li><u>Reset 3D Transform</u></li> <li><u>X Rotate Value</u></li> <li><u>Y Rotate Value</u></li> <li><u>Z Rotate Value</u></li> <li><u>Invert Keyframe List</u></li> <li><u>Uniform Keyframe List</u></li> <li><u>Reset Keyframe List</u></li> </ul>	<ul style="list-style-type: none"> <li><u>Toggle Animation</u></li> <li><u>Insert Keyframe</u></li> <li><u>Delete Keyframe</u></li> <li><u>Go to Previous Edit Position</u></li> <li><u>Go to Next Edit Position</u></li> <li><u>Reset Keyframe</u></li> <li><u>Reset 3D Transform</u></li> <li><u>X rotate value</u></li> <li><u>Y rotate value</u></li> <li><u>Z rotate value</u></li> <li><u>Invert Keyframe List</u></li> <li><u>Uniform Keyframe List</u></li> <li><u>Reset Keyframe List</u></li> </ul>

## 1.7.2. Effect View Toolbar

	Toggle Animation		Insert keyframe in current timeline position
	Delete keyframe in current timeline position		Go to Previous key frame position or object head position
	Go to next key frame position or object tail position		Speed Normal
	Speed Up		Speed Down
	Ease in out		Reset keyframe in current timeline position
	Reset 3D transform in current timeline position		3D Effect view type
	View 3D Horizon		Display ratio
	Zoom to Fit		Sync Video Background with NLE: Sync the video in NLE as background
	Video Background		Black Background/Checkboard Background
	Export		Option

## 1.8. Properties Window

### 1.8.1. Property Tab

The Properties Window has five tabs: Property, Shader, Effect, Text and Roll/Crawl.

**Name/Describe:** view selected object and describe

**Mix Style:** select Mix Normal/Mix Penetrate

**Render as new layer**

**Position:** view position, make change

**Rotation:** view rotate angle, make change.

**Scale:** view scale parameters, or change value. Left-click on  , changing to  , scale XY change simultaneously.

**Shear:** view shear value, or change.

**Pivot:** view pivot position, or make change.

**Reset:** reset selected value.

**Reset All:** By clicking on it will reset all values, but doesn't affect values in sub screen.

**Sub Window:** marked place in the picture left. If choosing different object, sub window will appear different accordingly.

Set parameters by:

- Clicking on the field and typing in the numbers
- Dragging the cursor over the field

## 1.8.2. Shader Tab

**Shader properties list**

**Shader Style drop-down list**

**Properties list:** Face, Outline, Shadow, Depth, Frame

- Add**
- Insert**
- Delete**
- Move Up**
- Move Down**

❖ You can set specific parameters in the properties list.

❖ You can also use preset Shader templates

❖ Set Dynamic Texture and Masking, found at the lower half of the tab.

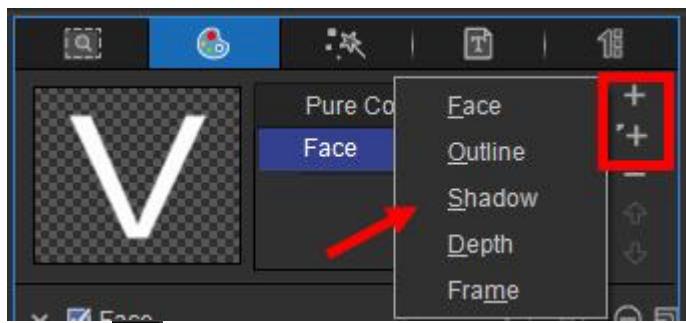

Shader preview

Pure Color

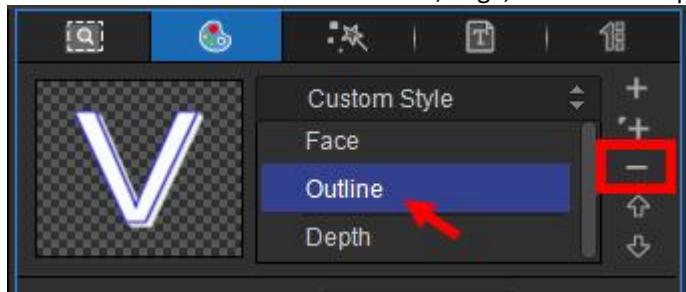

Classic Style  
Neon Style  
Solid Style  
Outline Style  
Pure Color  
Custom Style  
Quad Grad | Bmp Grad

Face      +  
Outline      +  
Shadow  
Depth  
Frame

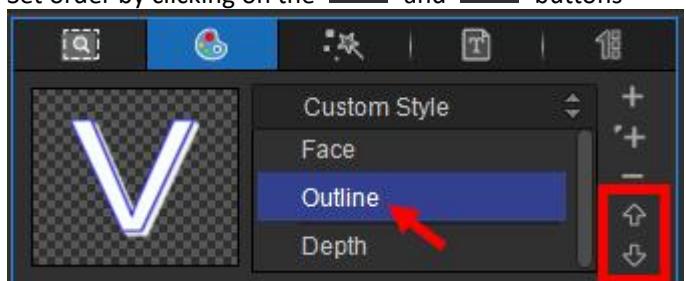

Use the **+** or **++** button to add Face, Edge, Shadow or Depth

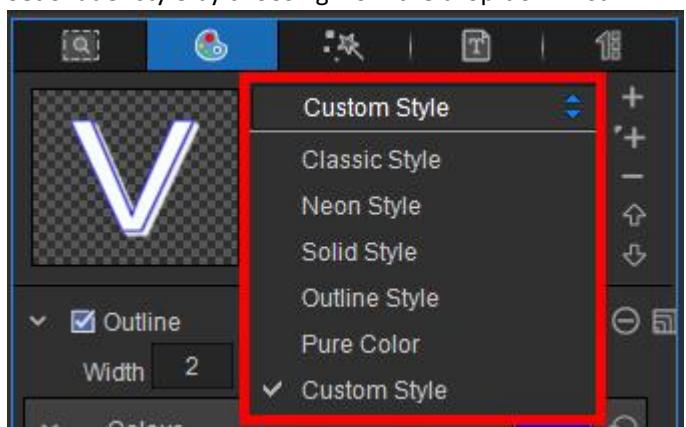

Use the button to remove Face, Edge, Shadow or Depth

Set order by clicking on the and buttons

Set Shader style by choosing from the drop-down list.

### 1.8.3. Effect Tab

The screenshot shows the Effect Tab interface with three main sections:

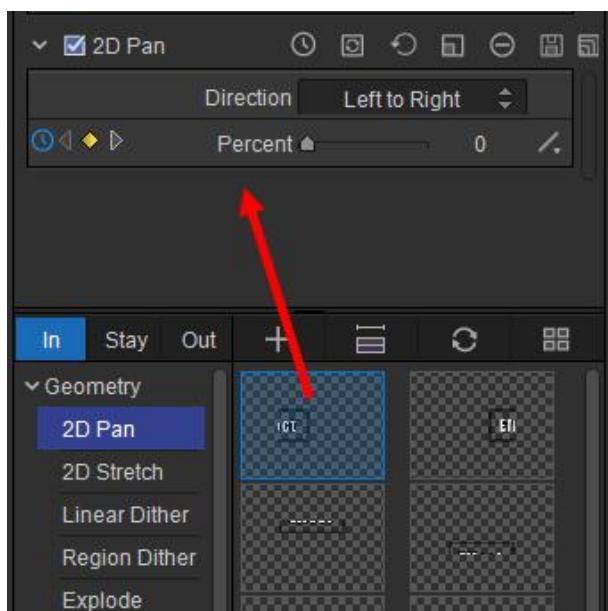

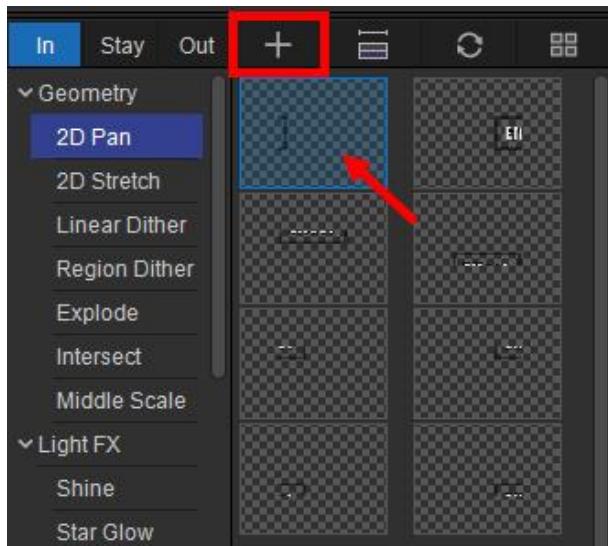

- 3D Transform:** Contains controls for Translate (X, Y, Z), Rotate (X, Y, Z), Scale (X, Y, Z), Pivot (X, Y, Z), and Transparency.
- 2D Pan:** Contains two sets of controls for 2D Pan: one for the In method (Direction: Bottom to Top, Percent: 60) and one for the Out method (Direction: Right to Left, Percent: 0).
- Screen In/Out:** A list of effects including 2D Pan, 2D Stretch, Linear Dither, Region Dither, Explode, Intersect, and Middle Scale. The 2D Pan effect is currently selected.

To the right of the interface is a detailed legend explaining the icons and functions:

- To the left: 3D Transform, 2D Pan and Screen In/Out areas**
- Expand:** Expand
- Reset:** Reset
- Fold/Expand:** Fold/Expand
- Delete:** Delete
- Save:** Save
- Lock X and Y axis scaling:** Lock X and Y axis scaling
- Screen In/Out area**
- In:** Choose In method
- Stay:** Choose Stay method
- Out:** Choose Out method
- Add a default length effect to the selected object:** Add a default length effect to the selected object
- Add an effect as long as the object to the selected object:** Add an effect as long as the object to the selected object
- Refresh the effects template library:** Refresh the effects template library
- Icon display/Text details display:** Icon display/Text details display

Setting screen In effect:

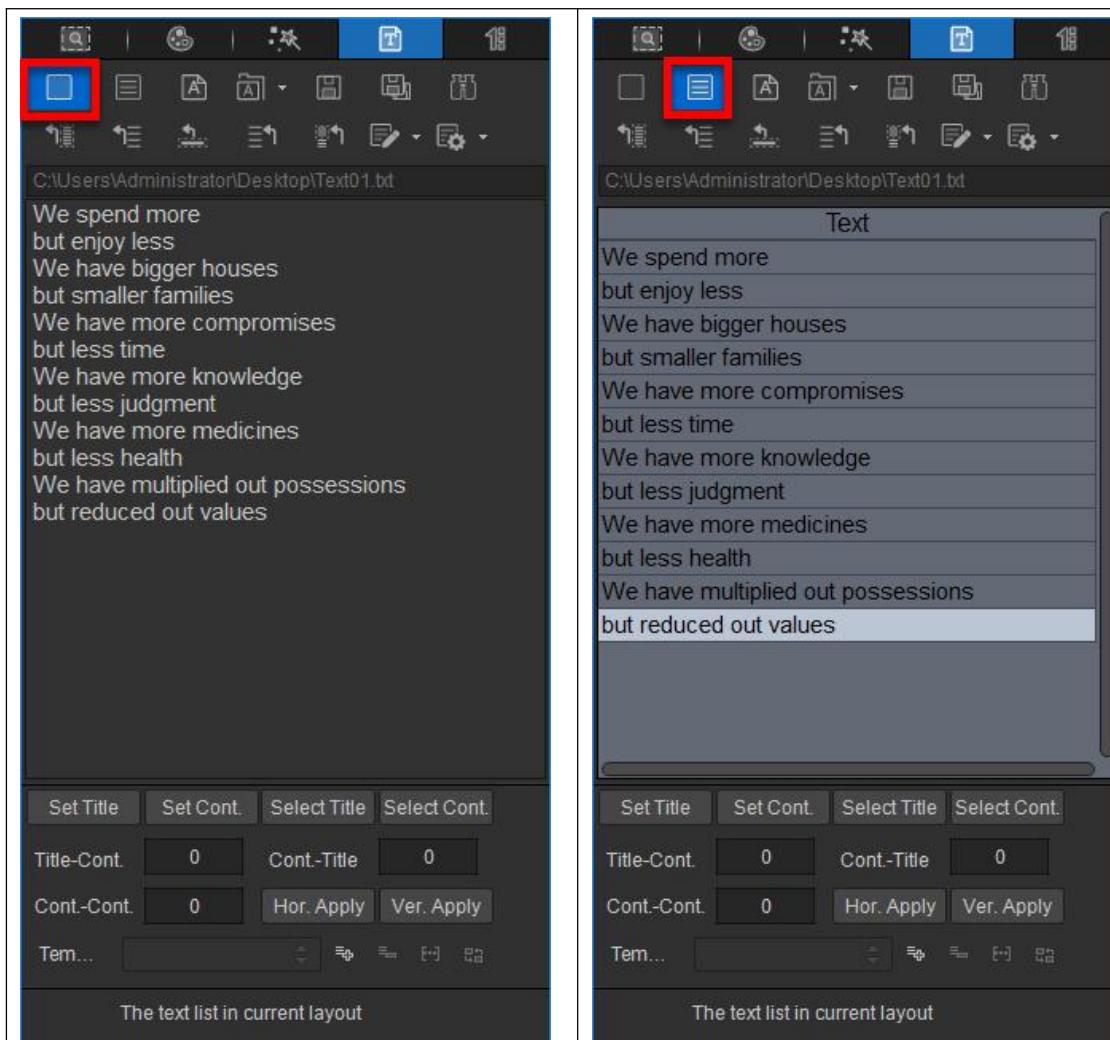

Click In, choose an effect from the templates, then click +.

Use the same method to apply [Stay] and [Out] effects.

#### 1.8.4. Text Tab

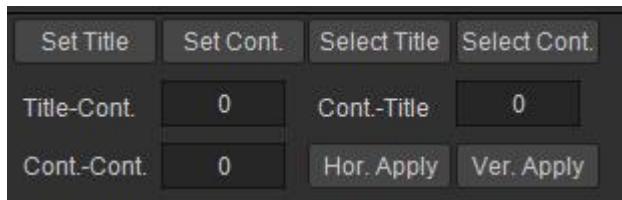

Whole text	Line by line text
------------	-------------------

Edit text options:

	Whole text		Line by line text
	New		Open
	Save		Save As
	Find and Replace		Create text
	Create line by line text		Create one line text
	Replace All		Replace
	Tools		Option

Roll/Crawl text editor menu:

**Set Title:** sets chosen text as Title

**Set Cont.:** sets chosen text as content

**Select Title:** pick out Titles

**Select Cont.:** pick out content

**Title-Cont.:** sets space between title and content

**Cont.-Title:** sets space between content and title

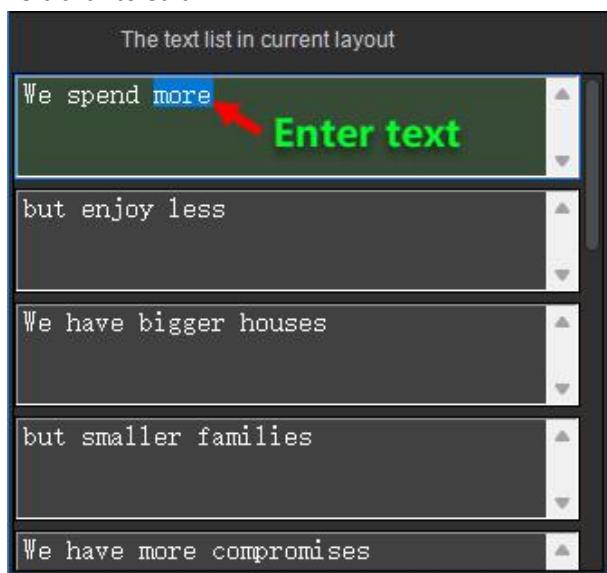

**Cont.-Cont.:** sets space between content and content

**Hor. Apply:** applies horizontally

**Ver. Apply:** applies vertically

At the bottom of the tab you can see the list of texts that are in the Edit Screen.

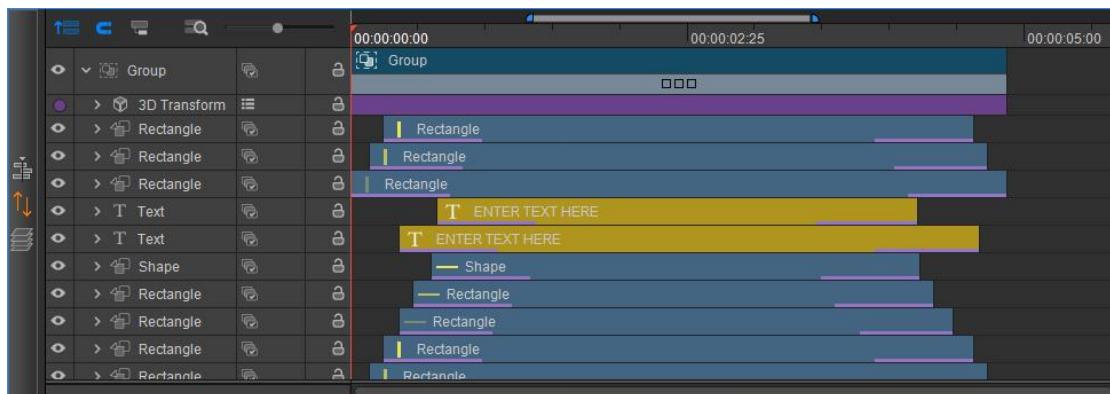

Left-click to edit.

### 1.8.5. Roll/Crawl Tab

	<p><b>Roll In:</b> set role in method  <b>Roll Out:</b> set roll out method  <b>Custom:</b> set roll time  <b>Loop:</b> set loop time and count  <b>Speed Down:</b> reduce roll speed.  <b>Liner:</b> apply liner effect  <b>Ruler:</b> set ruler size  <b>Full:</b> restore liner to full screen  <b>ScrollArea:</b>  <b>Ruler:</b> set roll limits  <b>Full:</b> set ruler to full screen  <b>Left/Right/Top/Bottom:</b> set roll limits  <b>Head/Tail Fade Pixel:</b> set head/tail in/out position  <b>Mask:</b> apply mask effect  <b>Invert:</b> apply invert effect  <b>Blur:</b> set blur parameters     </p>
--	---

### 1.9. Timeline Window

Timeline Window options:

	Set track as Visible/Invisible		Show/Hide object effect tracks
	Enable 3D transform		Lock object to prevent editing

Adjust the Timeline using the bar shown or right-click on the timeline, then drag the cursor.

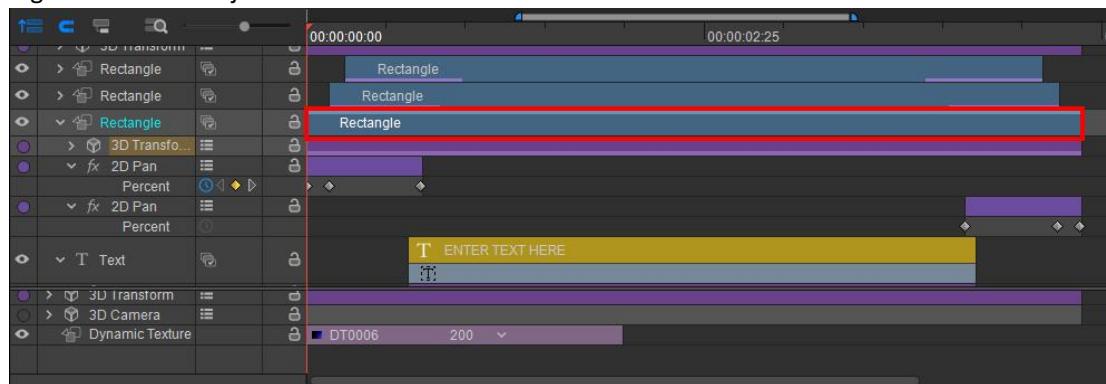

Click on the bar-button at the very left of the Timeline to open the Templates Library.

### 3D Transform and Dynamic Texture tracks:

	Enable effect options
	Enable/Disable 3D Transform Keyframe points.
	Go to previous Keyframe
	Add/Remove Keyframe
	Go to next Keyframe

Right-click on an object track to see the context menu:

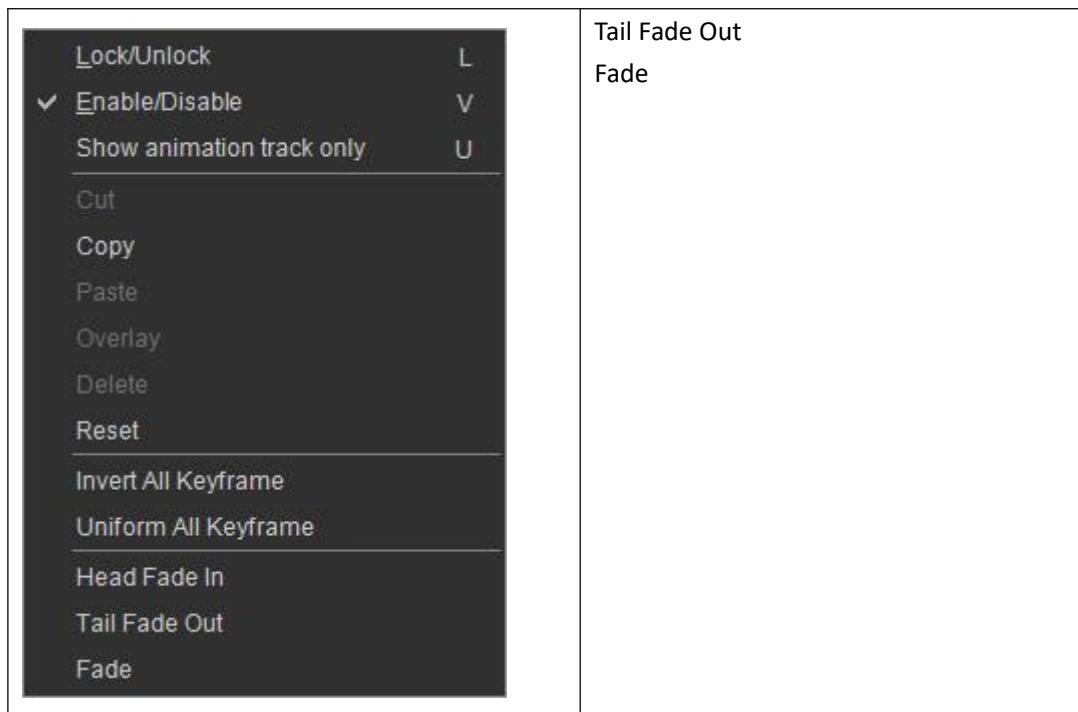

Up	Ctrl + PageUp	Up
Down	Ctrl + PageDown	Down
Move to Top	Ctrl + Home	Move to Top
Move to Bottom	Ctrl + End	Move to Bottom
Lock/Unlock	L	Lock/Unlock
Visible/Invisible	V	Visible/Invisible
Render as new layer		Render as new layer
Rename		Rename
Edit	Alt + E	Edit
Set Object Duration	Ctrl + D	Set Object Duration
Cut Effect		Cut Effect
Copy Effect		Copy Effect
Paste Effect		Paste Effect
Delete Effect		Delete Effect
Copy 3D Transform		Copy 3D Transform
Paste 3D Transform		Paste 3D Transform
Reset 3D Transform		Reset 3D Transform
Copy All		Copy All
Paste All		Paste all
Reset To Default		Reset to default

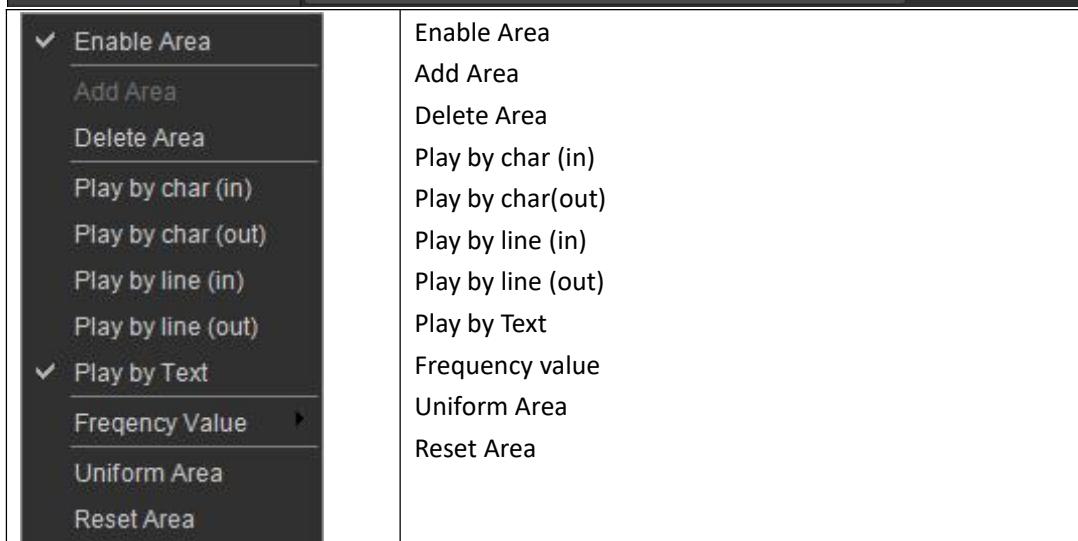

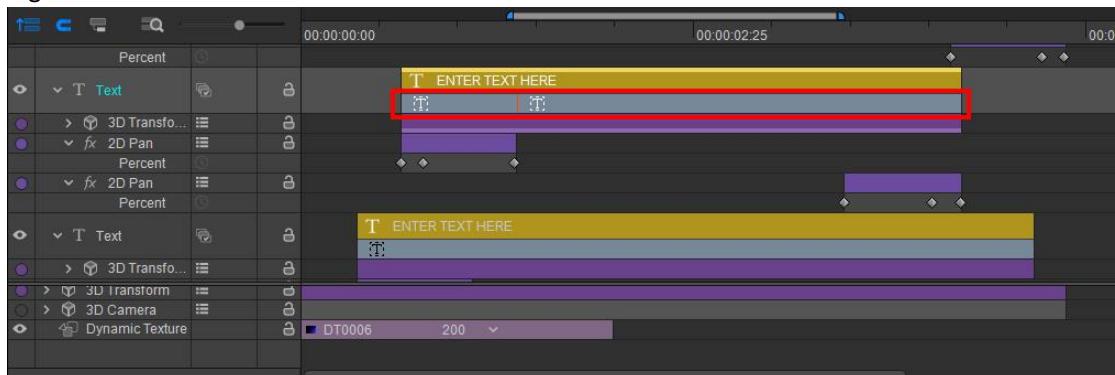

Right-click on an effect track to see the context menu:

	Lock/Unlock
	Enable/Disable
	Show animation track only
	Cut
	Copy
	Paste
	Overlay
	Delete
	Reset
	Invert All Keyframe
	Uniform All Keyframe
	Head Fade In

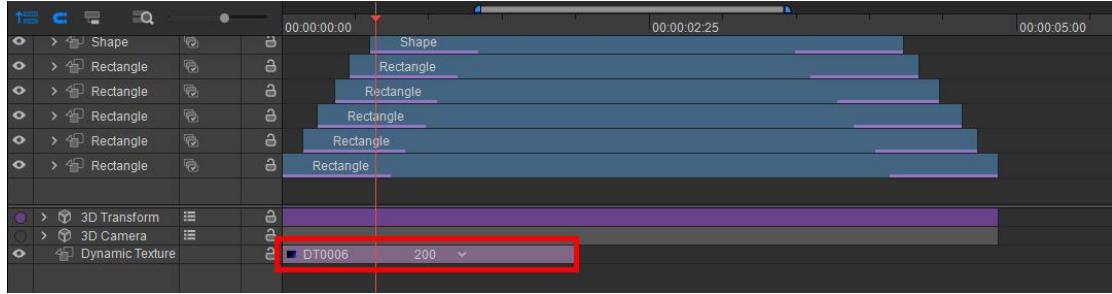

Right-click on a text effect track to see the context menu:

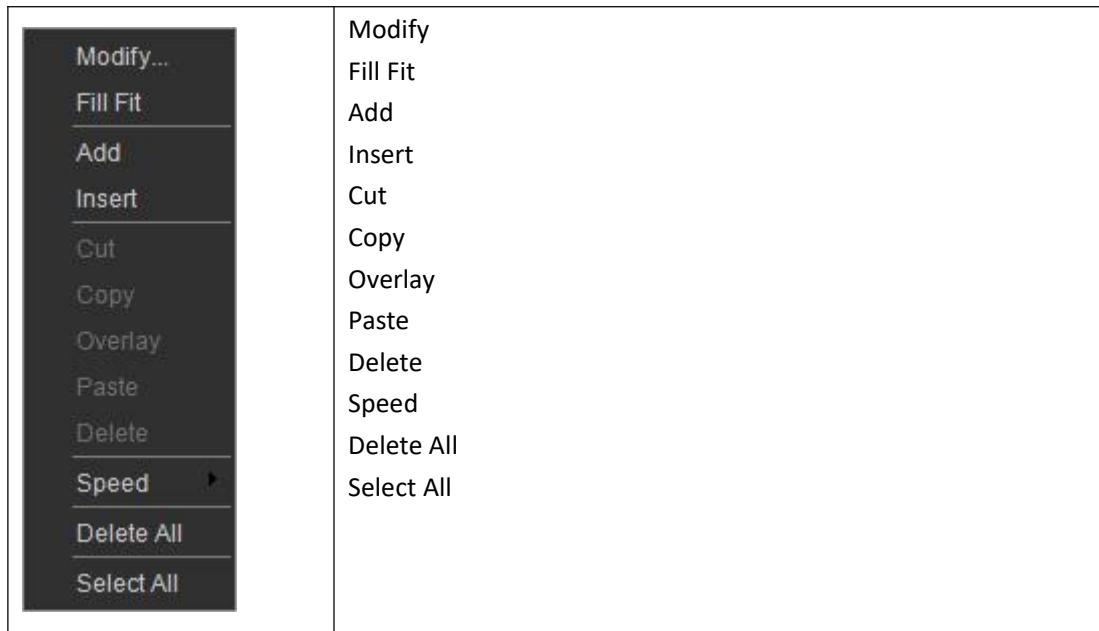

Right-click on a keyframe marker to see the context menu:

Right-click the Dynamic Texture track to see the context menu:

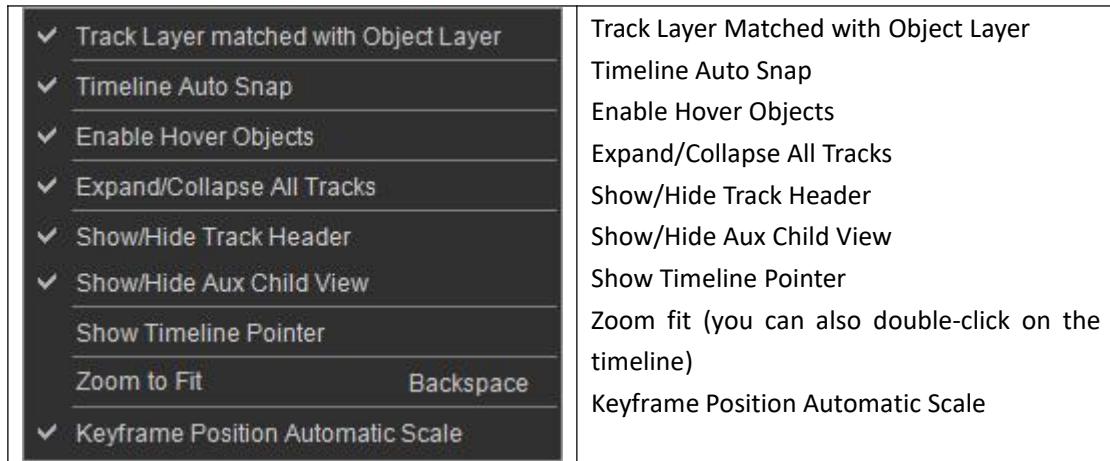

Set Dynamic Texture speed by choosing from the speed list.

Right-click on an empty track in the Timeline to see the context menu:

## 1.10. Template Library

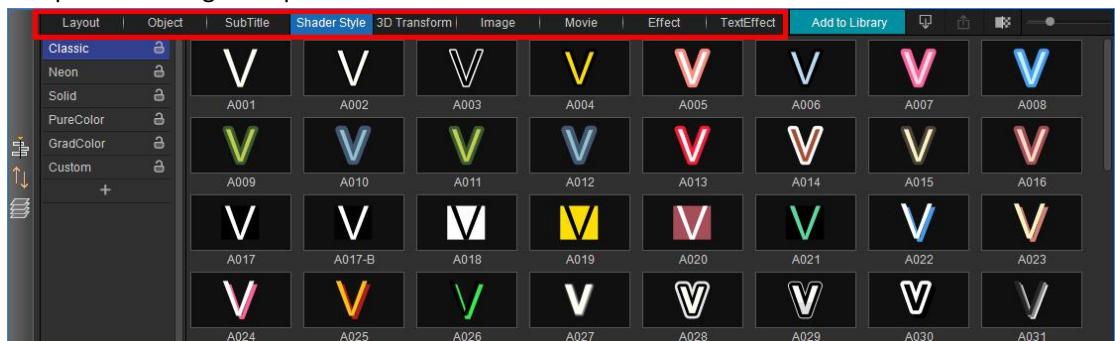

Template Library options:

	Add list		Delete list
	Import template		Export template
	Black Background/Checkboard Background		

Use the Zoom In/Out bar or [Zoom In/Out] buttons to zoom in/out of the template library.

From the template Menu Bar you can choose different template catalogues, such as Shader Templates or Image Templates.

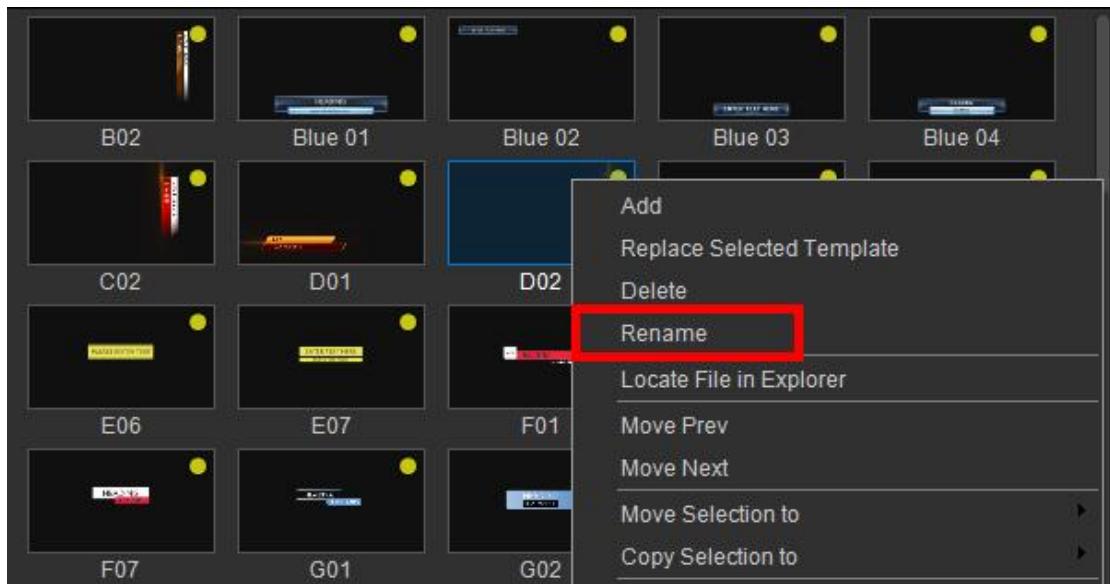

Changing template names:

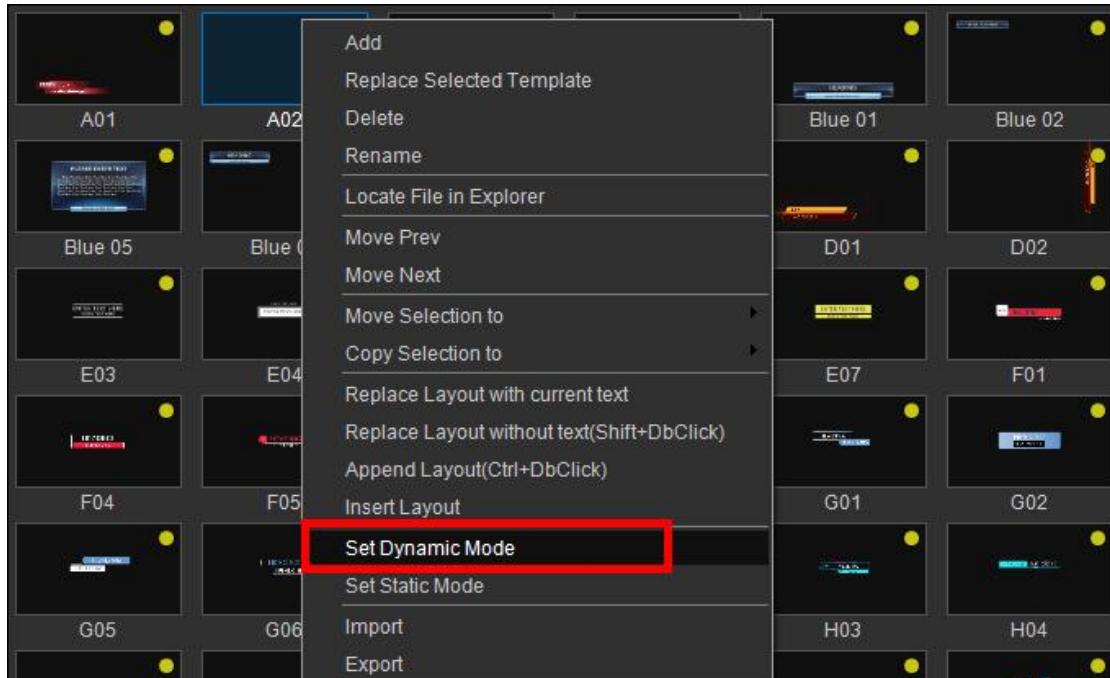

Method 1: double-click on the template name, enter a new name

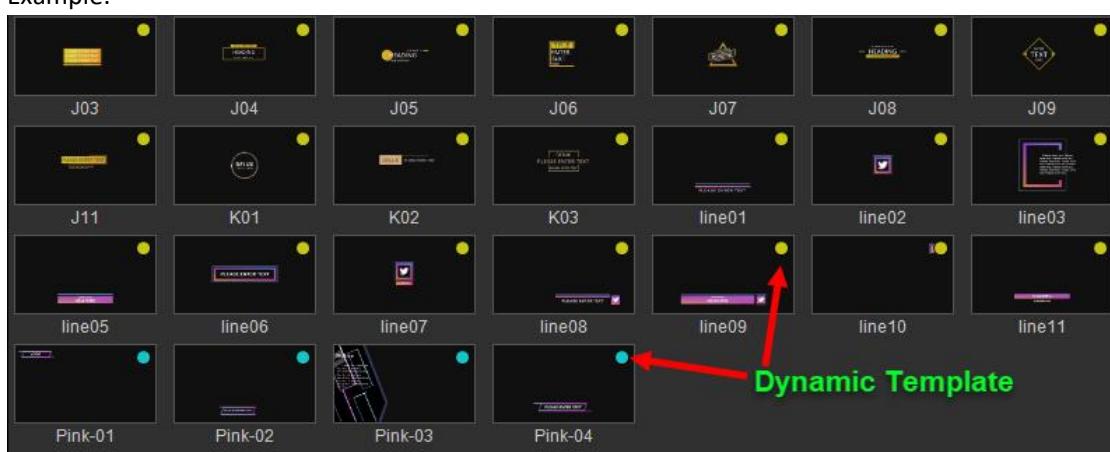

Method 2: right-click on the template and choose "Rename" from the context menu

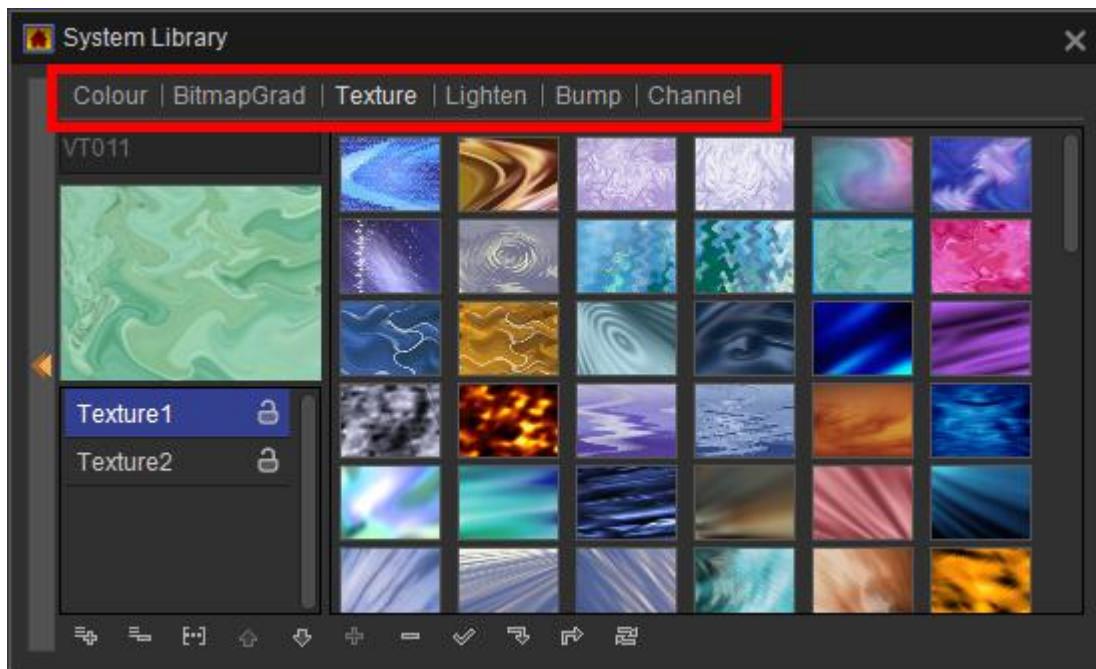

Saving a still template as an dynamic template: right-click on the still template and choose "Save as dynamic template". You can also save a dynamic template as a still template.

Example:

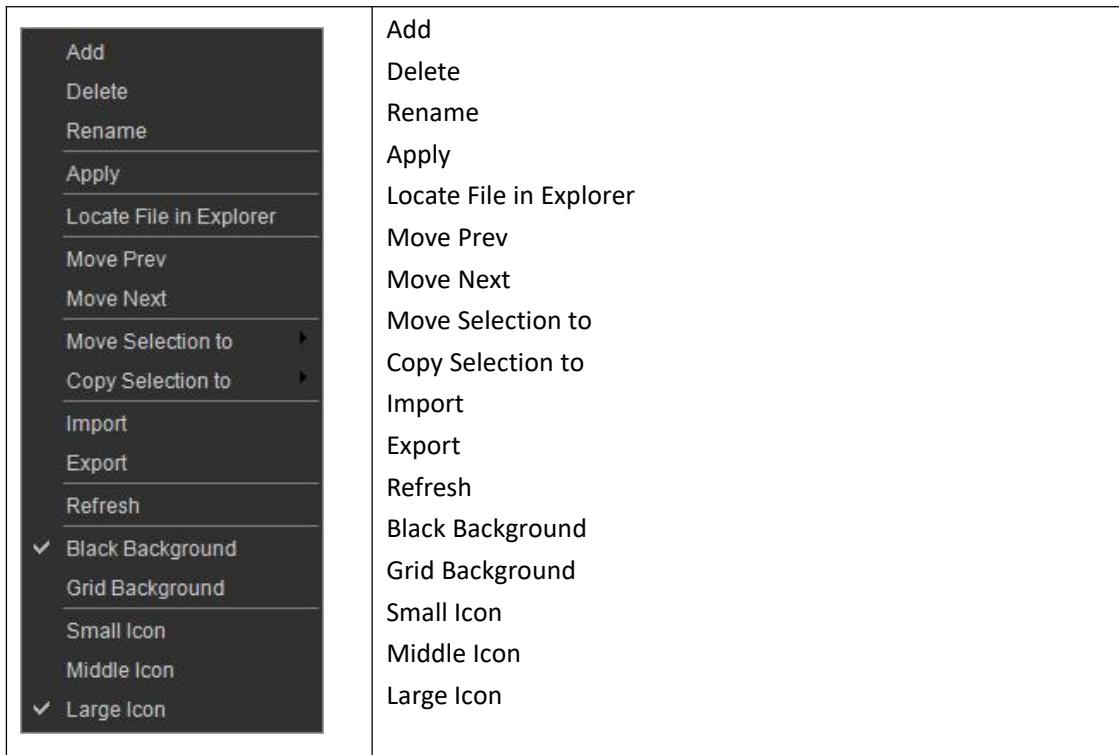

## 1.11. System Library

System Library options:

	Add list		Delete list
	Rename		Move up
	Move down		Add file
	Delete file		Apply file
	Import file		Export file
	Refrest System Library		

Right-click on an empty space (left context menu), or on a file (right context menu) for options:

**To delete a file either:**

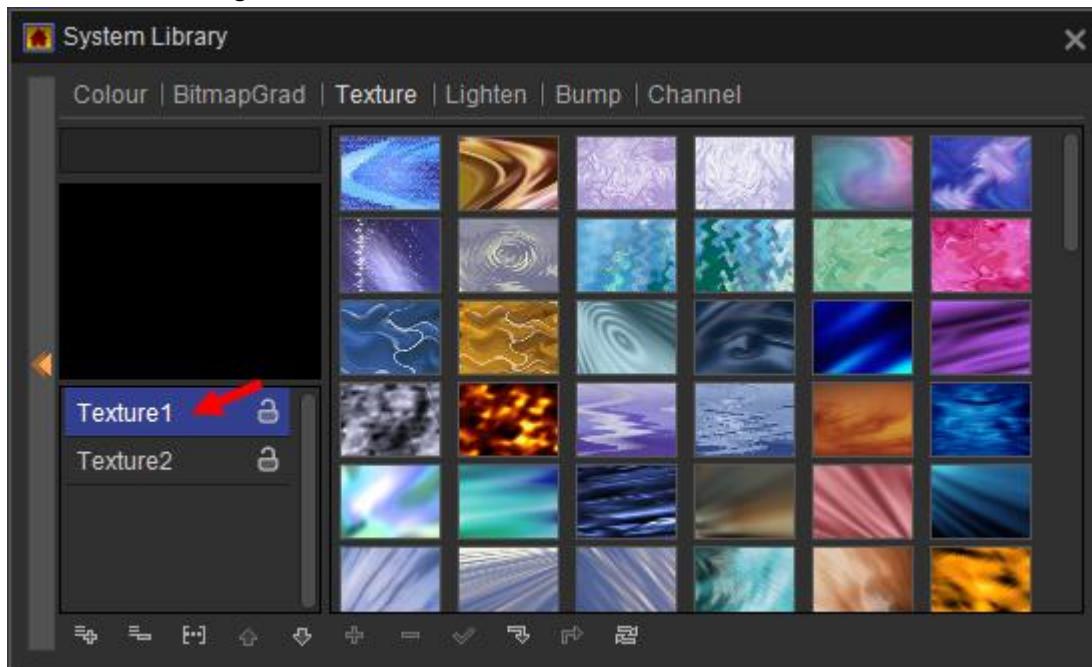

- Select a file, then press [Delete] on the keyboard or right-click and choose delete from the context menu.
- Select a file and press the button.

**To add a file either:**

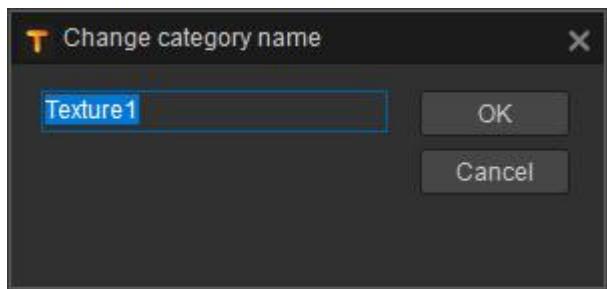

- Press on or double-click and choose a location to import from.
- Right-click, then choose "Import" from the context menu.

**To edit a template name:**

- Choose a catalogue

- Press on the [Rename] button, then enter a new name

3. Press [OK] to confirm. Press [Cancel] to exit without changing name.

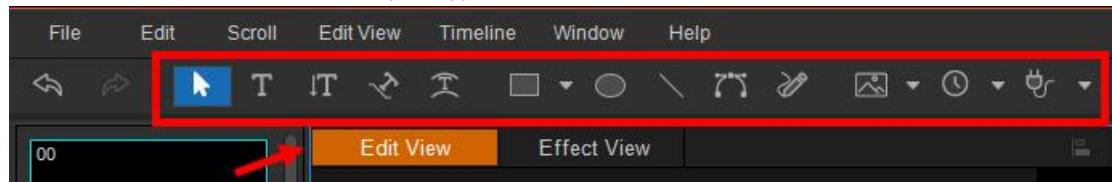

# Chapter Two Create Object

VisTitle provides a large number of default objects, including shapes, Bezier shapes, horizontal/morph/curve titles, images, animation, clock object,etc.

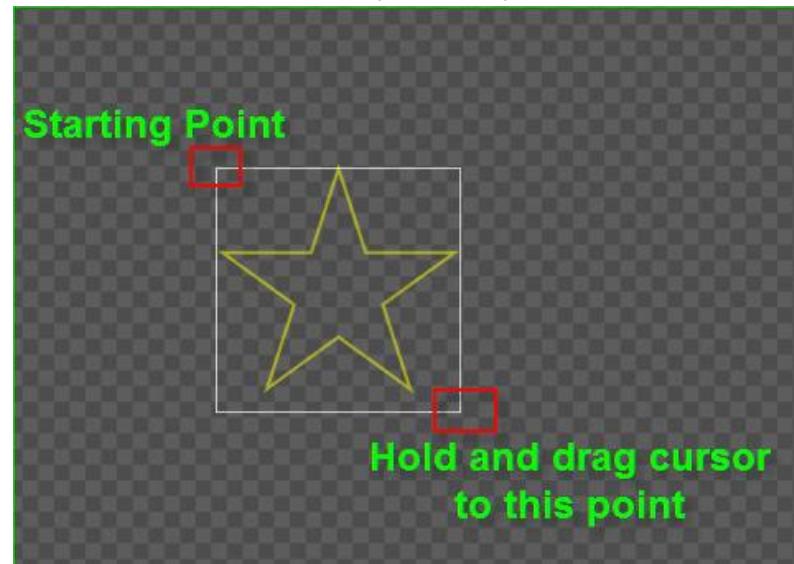

## 2.1. Operation flow

Most object creation follows the same basic operation flow:

- 1) In "Edit View" mode, select object type

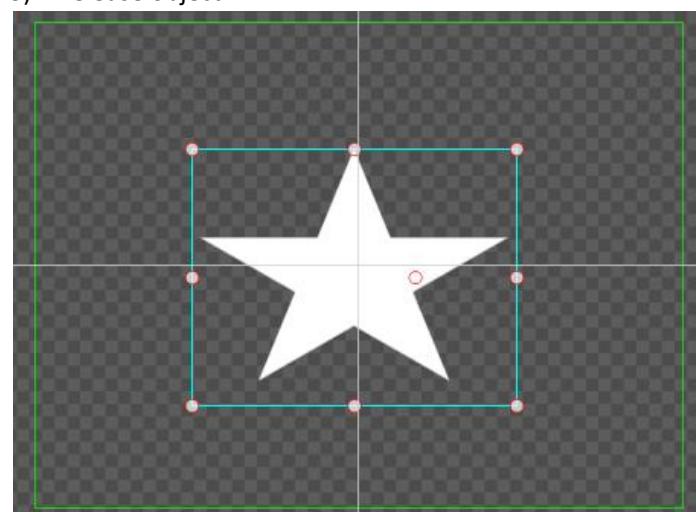

- 2) In Still Mode, click on the object and adjust size.

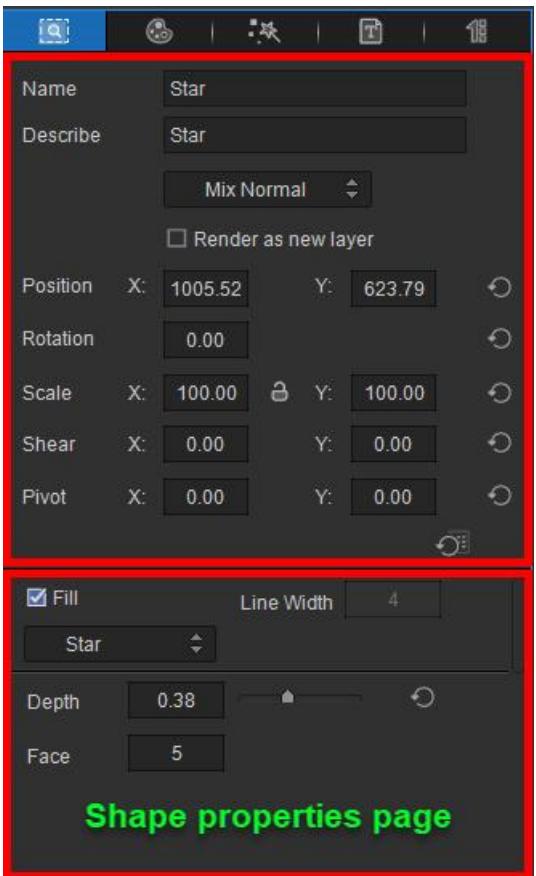

Note: Hold [Ctrl] when adjusting to keep vertical/horizontal size proportional.

- 3) Release object.

## 2.2. Shapes

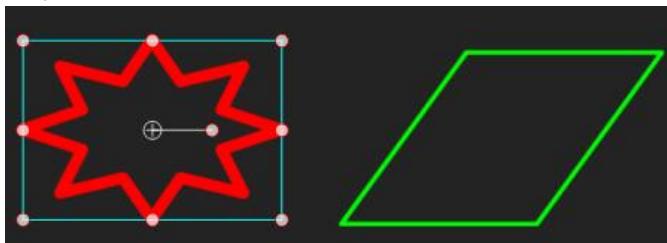

- Following the basic operation flow, other shapes can be created.
- Property

The screenshot shows the Properties Window with a red border. At the top, there are fields for 'Name' (Star) and 'Describe' (Star). Below that is a dropdown menu set to 'Mix Normal'. A checkbox for 'Render as new layer' is unchecked. The main section contains controls for 'Position' (X: 1005.52, Y: 623.79), 'Rotation' (0.00), 'Scale' (X: 100.00, Y: 100.00), 'Shear' (X: 0.00, Y: 0.00), and 'Pivot' (X: 0.00, Y: 0.00). At the bottom, there is a section for 'Shape properties page' with a checked 'Fill' checkbox (Line Width: 4), a dropdown set to 'Star', a 'Depth' slider at 0.38, and a 'Face' input field at 5.

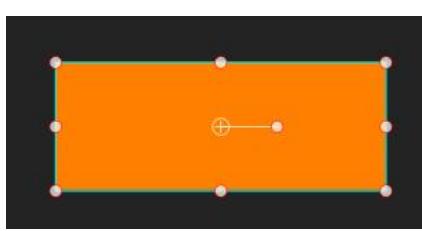

In the lower half of the Properties Window you can find the shape's special properties. Activate/Deactivate the [Fill] option to set Line Width. Choose object shape in the drop-down list. Changes will also take effect in the Edit Screen.

Shapes with Fill mode deactivated.

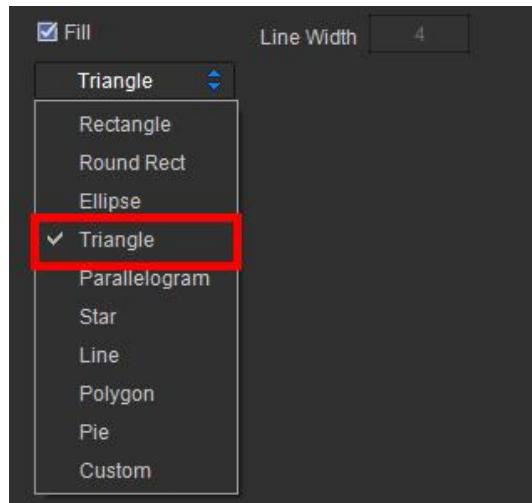

Changing shapes: rectangle to triangle

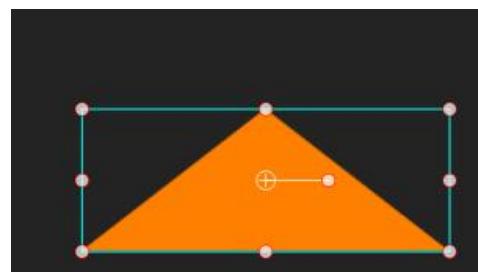

- 1) In the Edit Screen, click on the rectangle.

- 2) In the Properties Window drop-down list, select Triangle

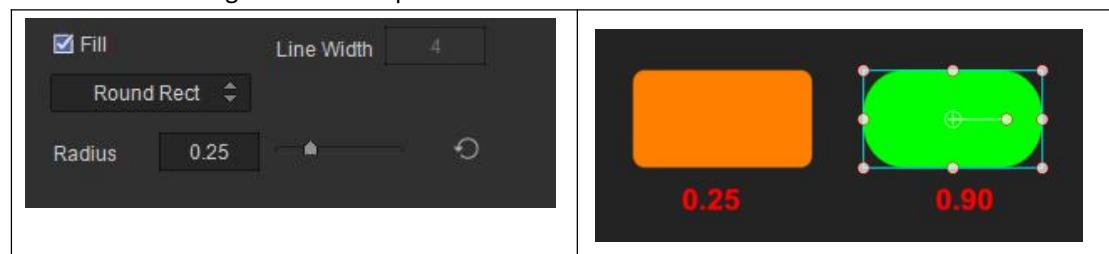

- 3) Object becomes triangle.

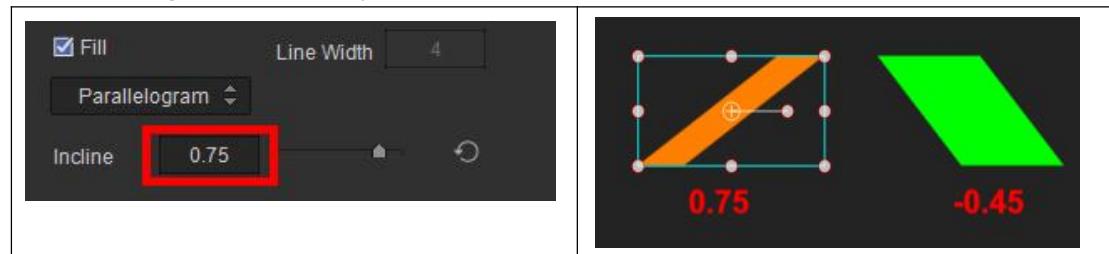

Shapes with special properties:

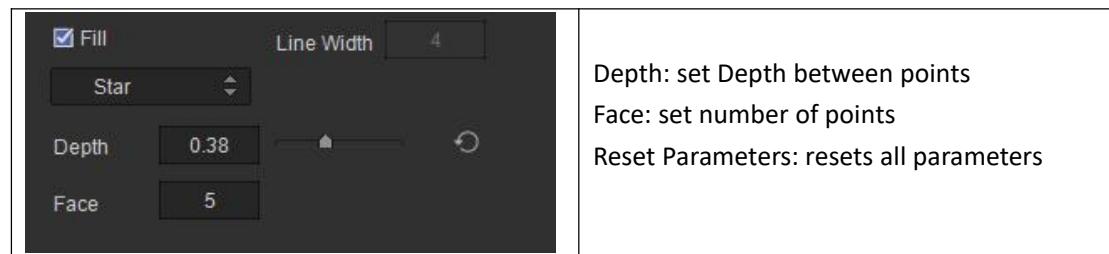

1. Round Rectangle: set Radius parameters

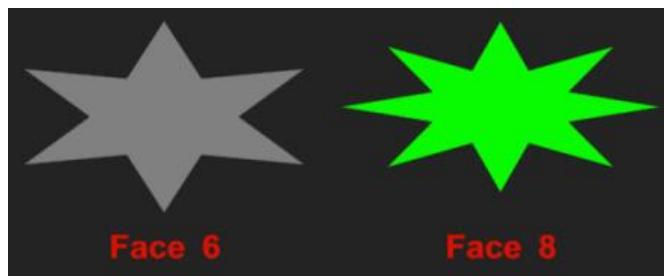

2. Parallelogram: set Incline parameters

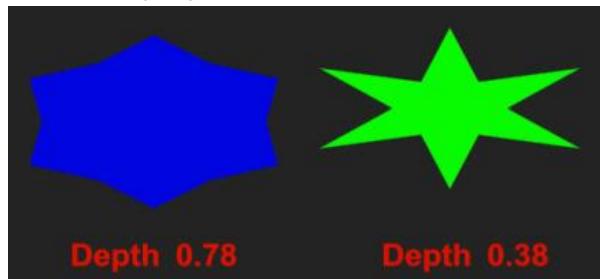

3. Star

Different Face parameters.

Different Depth parameters

#### 4. Polygon: Face parameters set the number of sides

<input checked="" type="checkbox"/> Fill      Line Width <input type="text" value="4"/> Polygon <input type="button" value="▼"/>  Face <input type="text" value="5"/>	 <b>Face 8</b> <b>Face 5</b>
--	---------------------------------

#### 5. Pie Shape

<input checked="" type="checkbox"/> Fill      Line Width <input type="text" value="4"/> Pie <input type="button" value="▼"/>  Angle <input type="text" value="0.00"/> <input type="text" value="60.00"/> <input type="button" value="↻"/>	<p>Angle: set Pie angle and angle size</p>
--	--

#### Example

Angle <input type="text" value="113.00"/> <input type="text" value="90.00"/> <input type="button" value="↻"/>  Change angle	 <b>Angel 0.00 90.00 Angel 120.00 90.00</b>
Angle <input type="text" value="113.00"/> <input type="text" value="90.00"/> <input type="button" value="↻"/>  Change angle size	 <b>Angel 0.00 150.00 Angel 0.00 60.00</b>

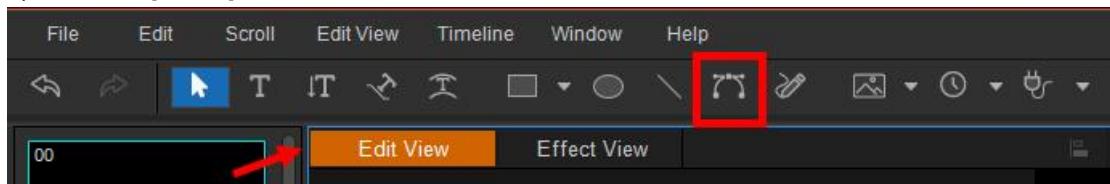

#### 6. Line: set Line Width

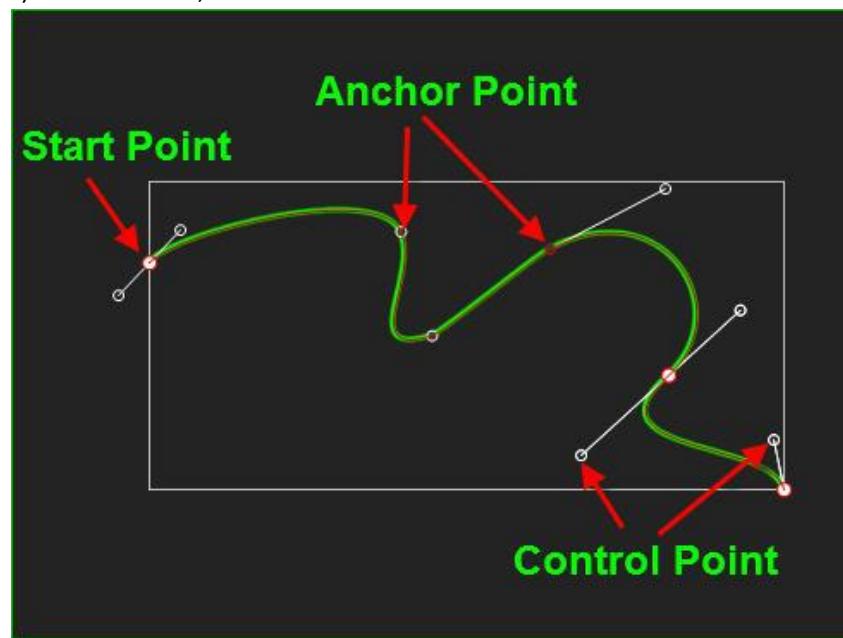

## 2.3. Bezier Curve

The way to create a Bezier Curve and a shape is not the same as for other objects.

- 1) Click on [Bezier]

- 2) In Still Mode, set the Bezier Curve Anchor Points.

**Note:**

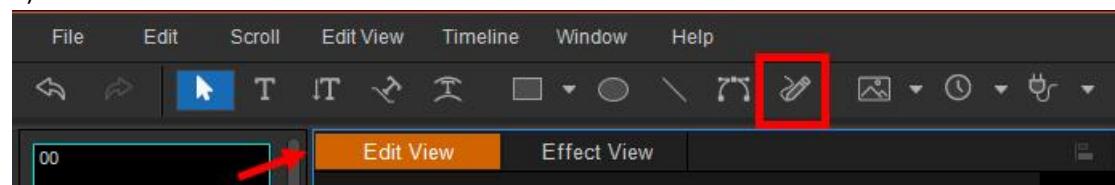

- If you release the left mouse button straight away, both the Anchor and Control Points will be created
- If you keep the left mouse button pressed, you can first set the Control Points, and then create the Anchor Point.
- Join the last Anchor Point to the Start Point to complete the shape, or double-click/press ESC to finish editing.
- Double-click on the Bezier Curve to resume editing.
- In edit mode, right click to see the following context menu

<p><u>Smooth</u></p> <p><u>Sharp</u></p> <p><u>Delete</u></p> <p><u>Lock/Unlock</u></p> <p><u>Set Start</u></p> <p><input checked="" type="checkbox"/> <u>Enable/Disable</u></p> <p><input checked="" type="checkbox"/> <u>Combine Move</u></p> <p><u>Line With Pre Node</u></p> <p><u>Line With Next Node</u></p> <p><u>Closed</u></p> <p><u>Fill</u></p>	<p><b>Smooth:</b> smoothen lines between points</p> <p><b>Sharp:</b> sharpen lines between points</p> <p><b>Delete:</b> delete point</p> <p><b>Lock/Unlock:</b> prevents point from being edited</p> <p><b>Set Start:</b> set as start point</p> <p><b>Enable/Disable:</b> you can disable the point</p> <p><b>Combine Move:</b> move Control Points together or separately</p> <p><b>Line With Pre Node:</b> Connect a straight line to the previous node</p> <p><b>Line With Next Node:</b> Connect a straight line to the next node</p> <p><b>Close:</b> close/open curve</p> <p><b>Fill:</b> Fill to full</p>
--	---

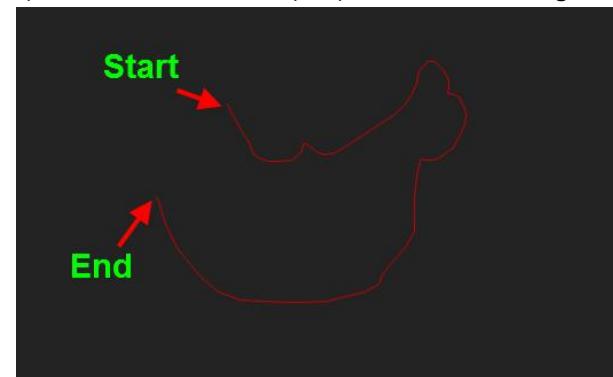

## 2.4. Paintstroke

- Operation flow

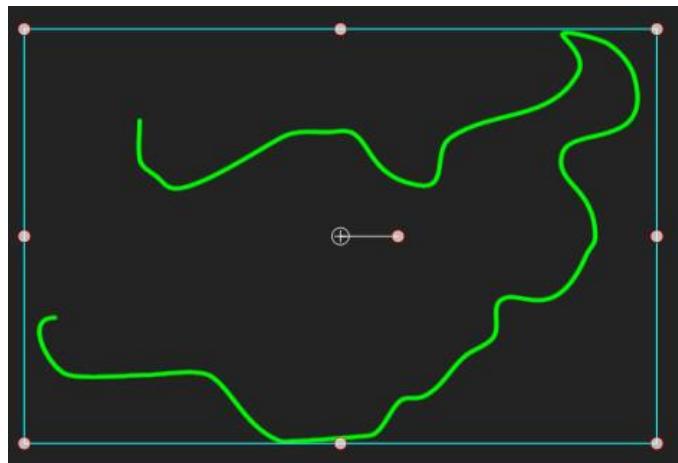

- Click Paintstroke button.

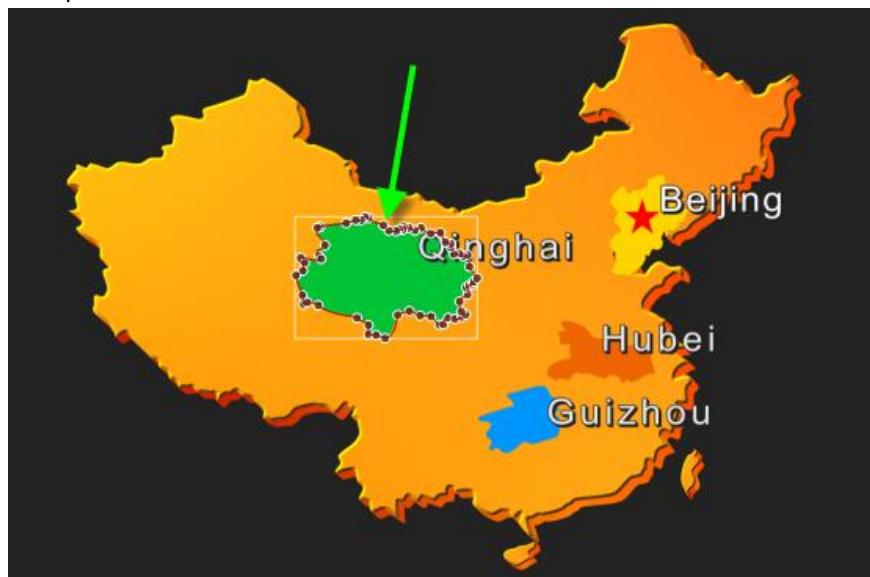

- In the Editor Screen (still), left-click, and drag.

- Release left mouse button, type ESC to exit.

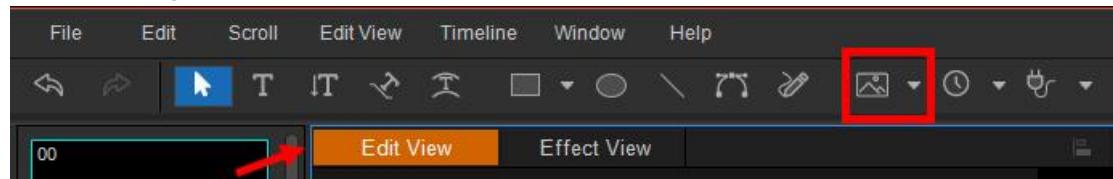

Example:

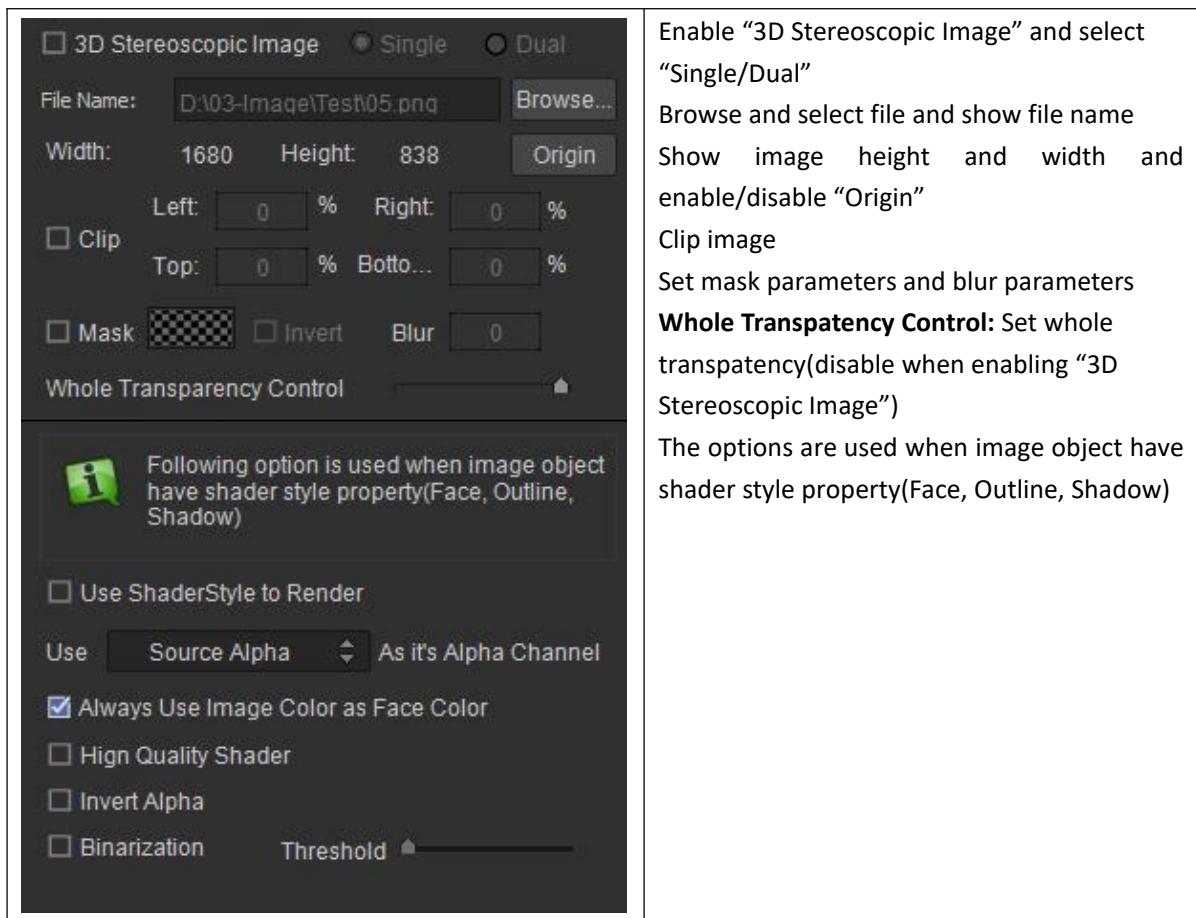

## 2.5. Image

The operation flow for images and objects is similar, the only difference is that an image file needs to be chosen in the Properties Window.

- 1) Click [Image] button

- 2) Set position and size in Still Mode. Release mouse cursor.
- 3) In the Properties Window select an image file (and Mask if needed).

Enable “3D Stereoscopic Image” and select “Single/Dual”

Browse and select file and show file name

Show image height and width and enable/disable “Origin”

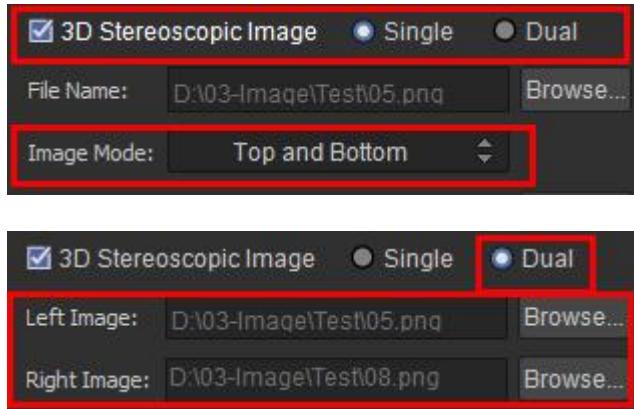

Clip image

Set mask parameters and blur parameters

**Whole Transparency Control:** Set whole transparency(disable when enabling “3D Stereoscopic Image”)

The options are used when image object have shader style property(Face, Outline, Shadow)

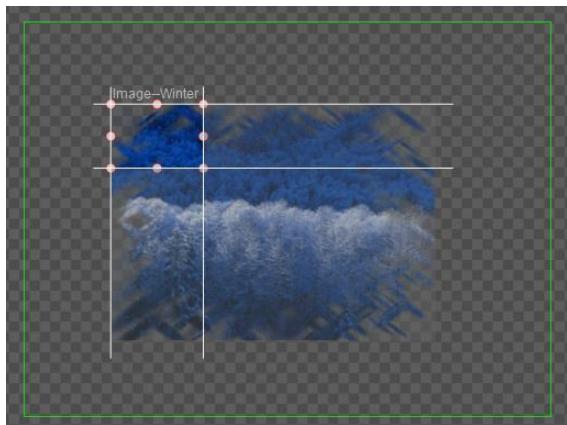

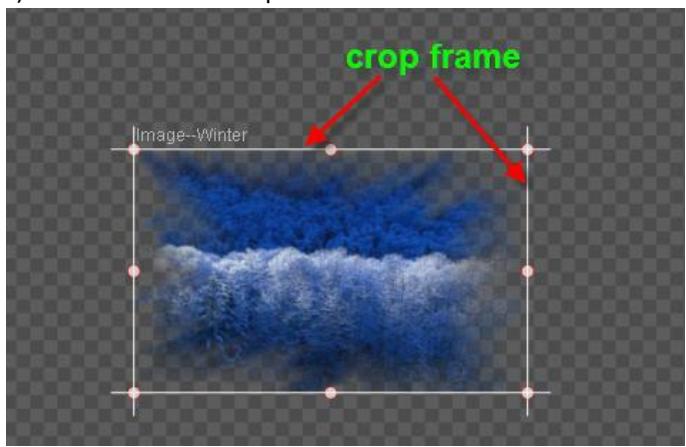

#### Specific Properties of 3D Stereoscopic Image

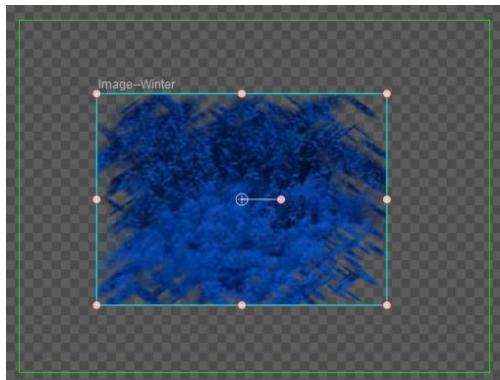

4) Example.

5) Double-click to Crop

6) The selected area will expand to the original image size

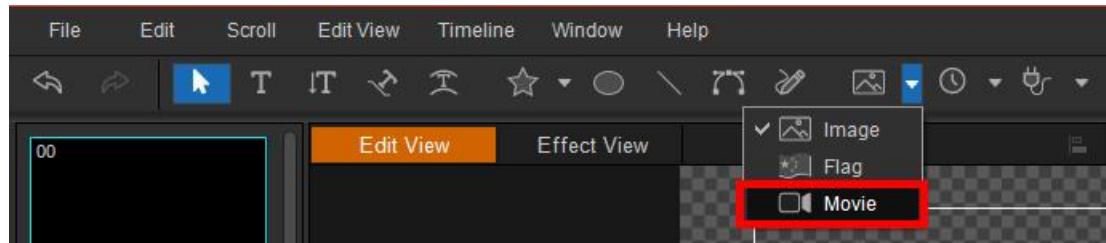

7) Press ESC to exit

## 2.6. Animation

Create Animation and Create Image operation flows are similar.

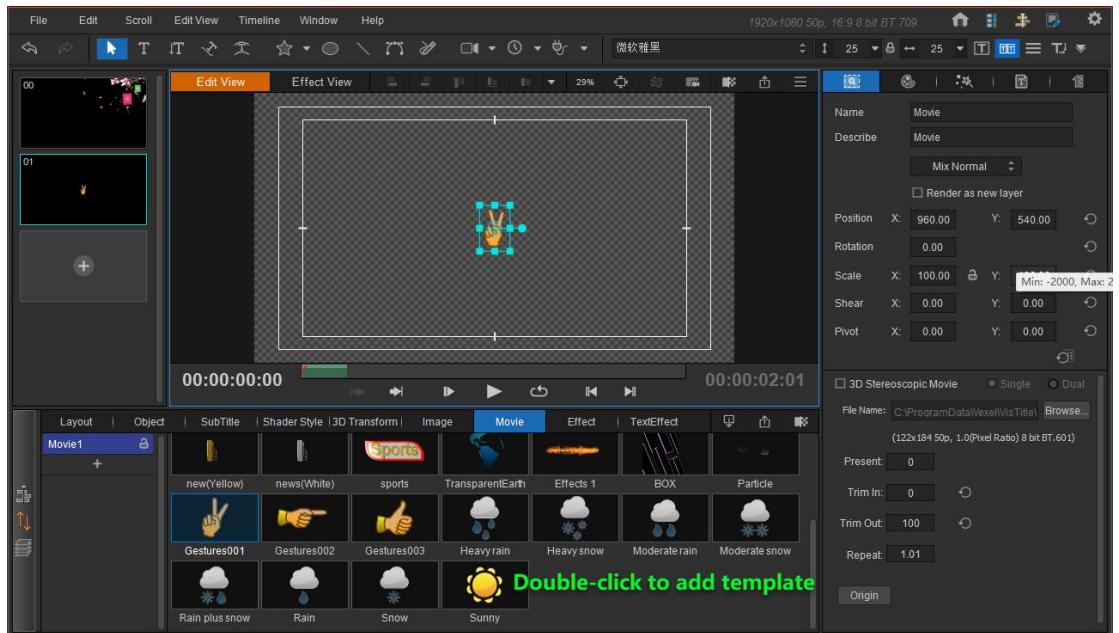

- 1) Click [Movie] button

- 2) In Still Mode, adjust size and position.
- 3) Release mouse cursor
- 4) In Properties Window select animation file and set parameters.

	<p><b>Present:</b> set start frame <b>Trim In:</b> set start time point <b>Trim Out:</b> set end time point <b>Repeat:</b> set repetitions <b>Origin:</b> go to animated object original position</p>
--	---

- 5) Create complete
- Using animation templates
- A large number of preset animated objects are provided. Go to the templates library and double-click on them to use them.

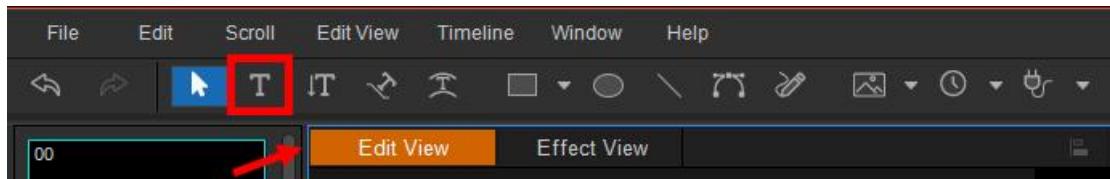

Note: If you double-click on an animation in the templates library when an animation has been selected in the Edit Screen, it will be replaced.

## 2.7. Horizontal/Vertical Text

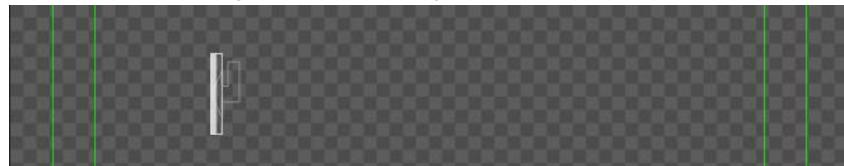

Normal-frame and Set-frame Text options are possible.

- Create Normal Text

- 1) Click [Horizontal Text] button

- 2) In Still Mode, adjust text size and position.

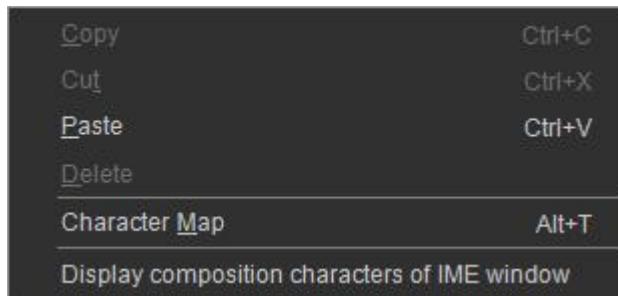

- 3) Enter text

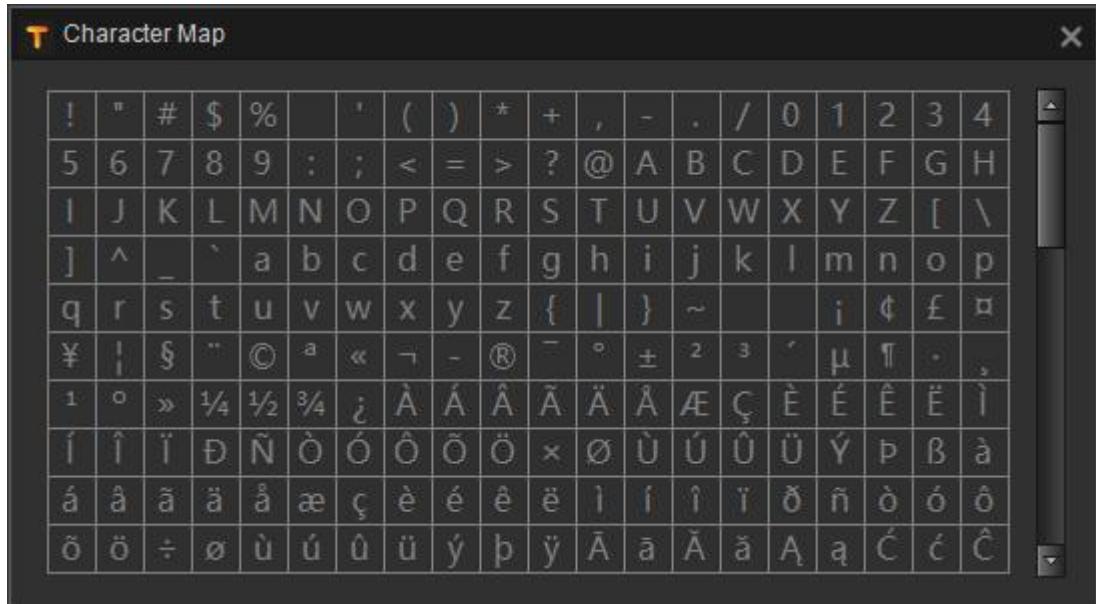

Method 1: enter text

Method 2: copy and paste

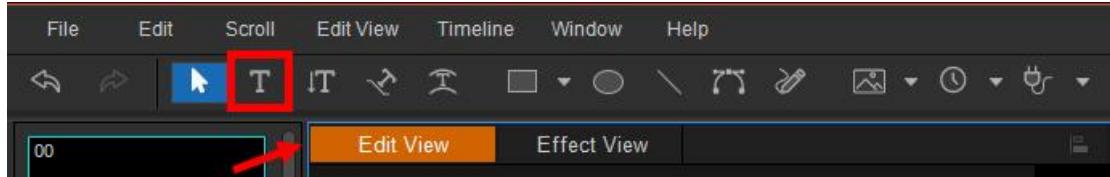

Right click in text editing state and choose "Character Map" from the context menu.

- 4) Press ESC or double-click to exit
- 5) Double-click on text to continue editing
- Create Set-Frame Text

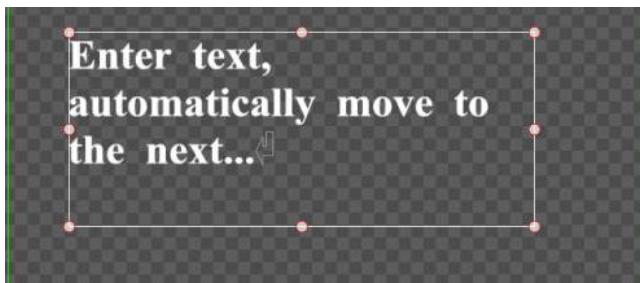

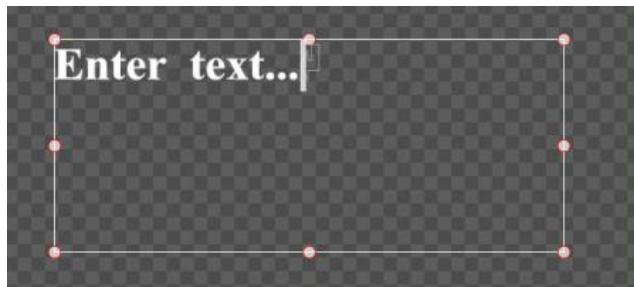

- 1) Click [Horizontal Text] button

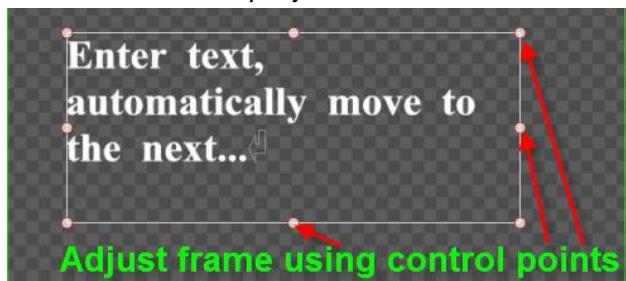

- 2) In Still Mode drag cursor to desired frame size

- 3) Enter text. If text exceeds frame it will automatically move to the next line.

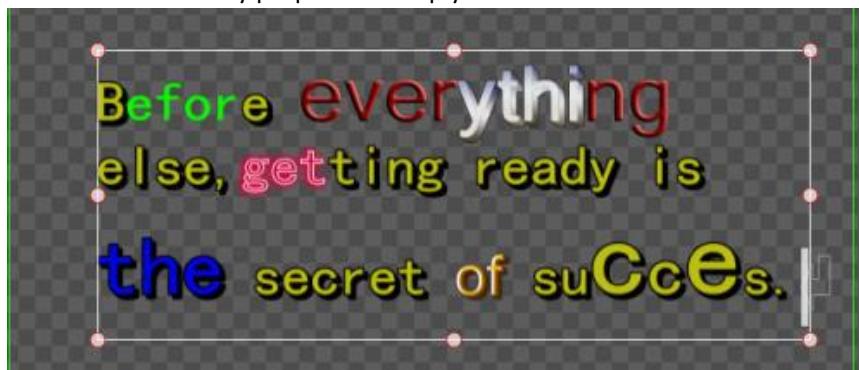

Text will automatically adjust when frame is shifted

- 4) Press ESC or double-click to exit
- 5) Double-click on the text to continue editing.
- Properties

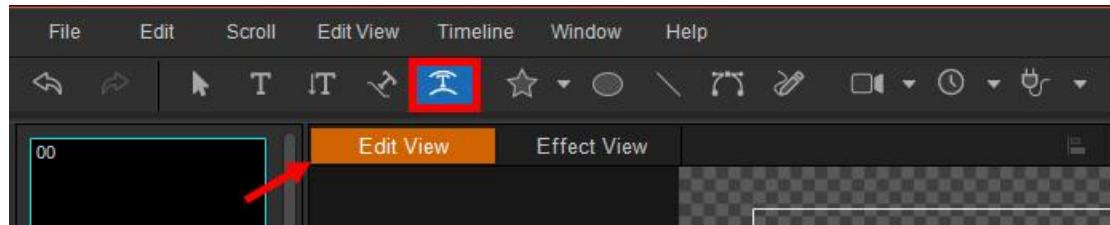

Text Titles have many properties. Simply double-click on the desired text to start editing.

## 2.8. Morph Text

- Creating Morph Text uses the same operation flow as Normal Text.

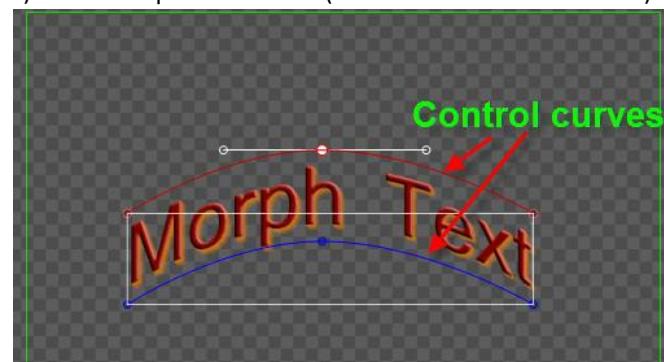

1) Click [Morph Text] button

2) In Still Mode adjust text position, then enter text

3) Edit Morph Text curves (see also Bezier curve editor)

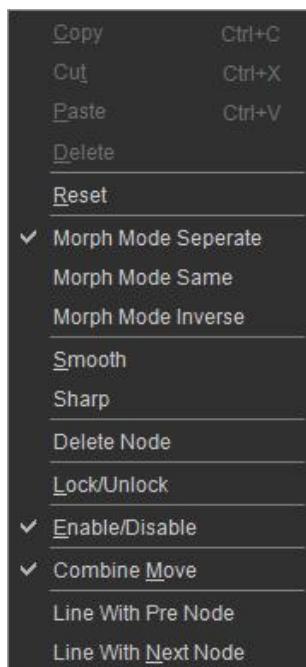

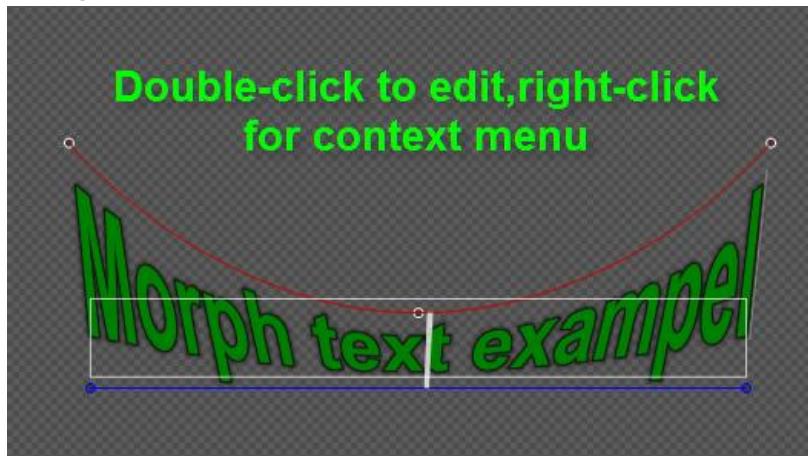

4) You can choose a morph text template from the Properties Window

5) Press ESC to exit. Example:

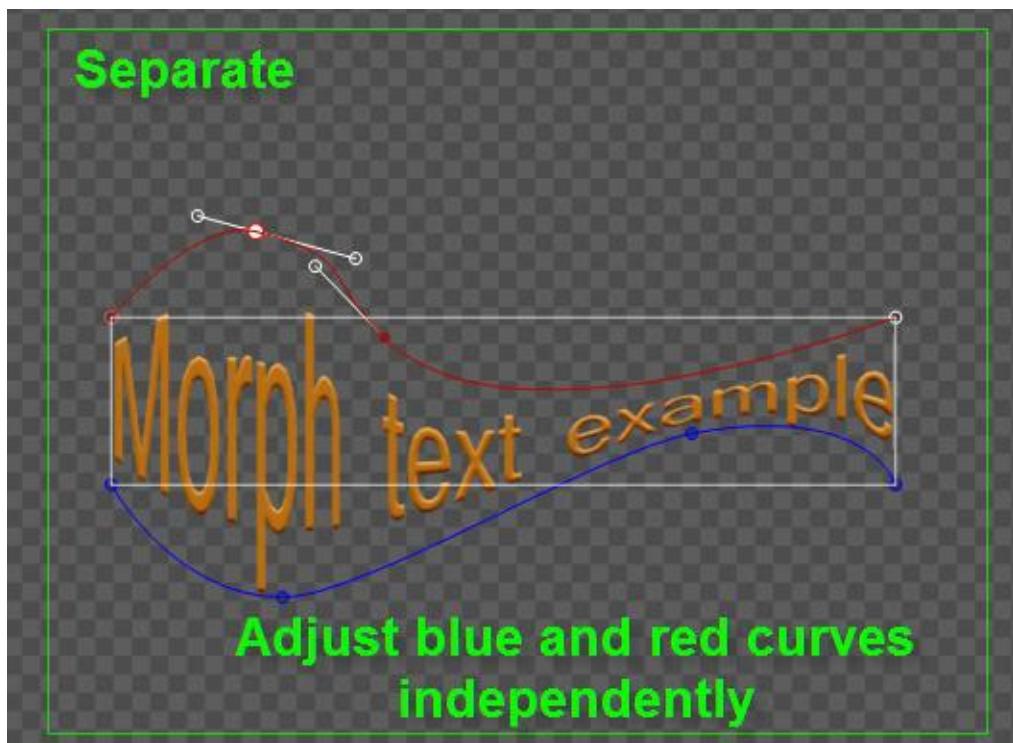

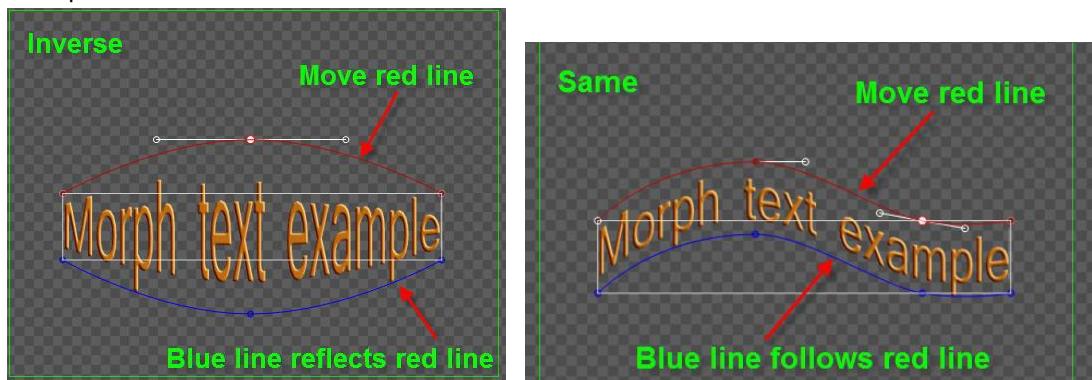

- 6) Double-click on text to resume editing.
  - Morph Text control curves have three settings:  
Separate - control curves independently  
Same - control curves together  
Inverse - curves do the inverse of each other  
Set in two ways
- 1) Right-click on the text and then choose from the context menu

2) Select in the Properties Window

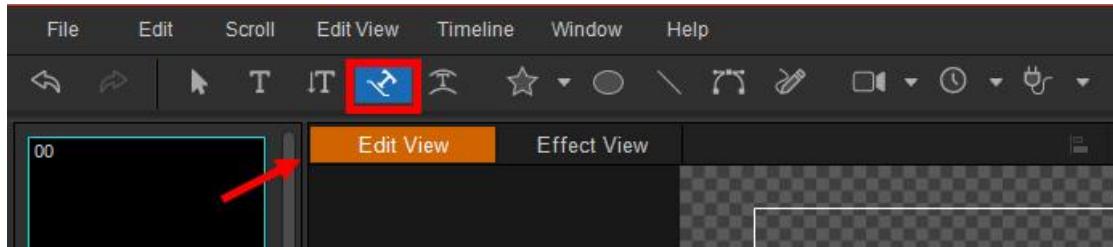

Example:

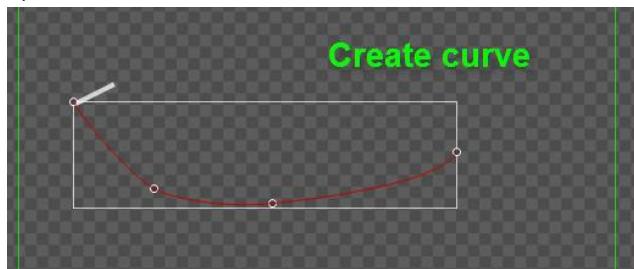

## 2.9. Curve Text

- Operation flow similar to normal text

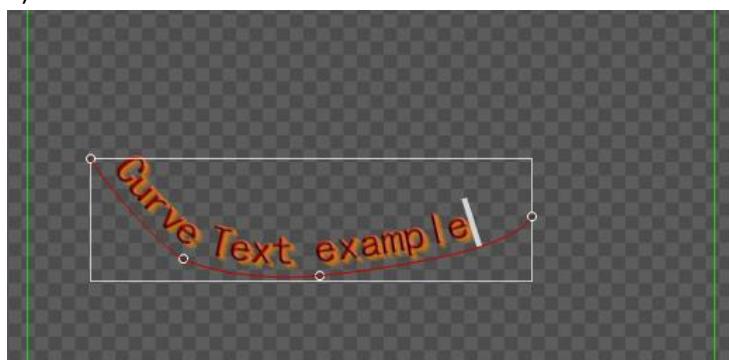

1) Click [Curve Text] button

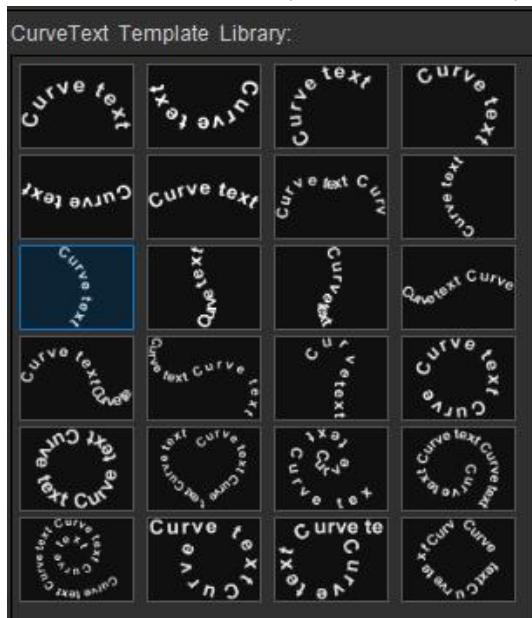

2) In Still mode use the Bezier curve method to create curves.

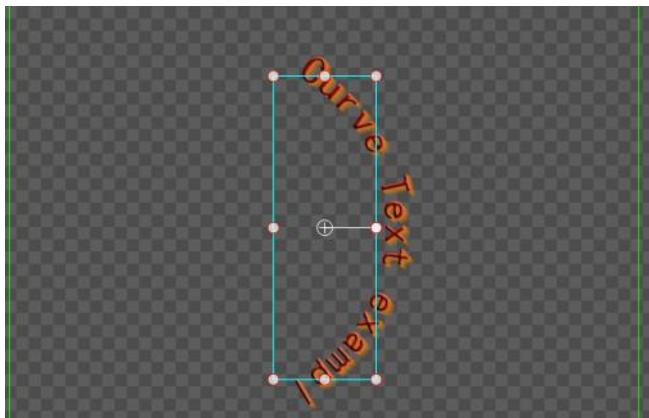

3) Enter text

4) You can also choose preset Curve Text styles from the template library.

5) Press ESC to exit. Example:

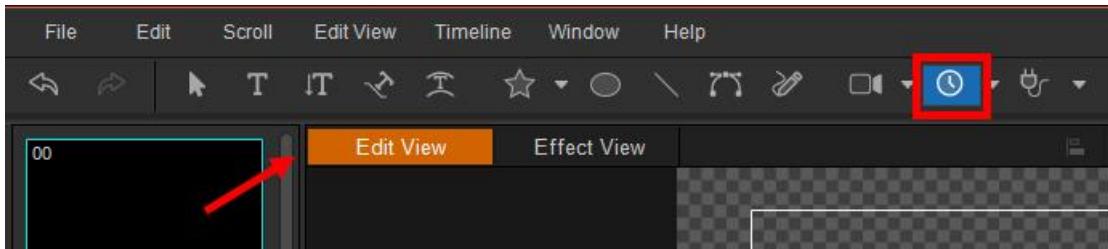

- 6) To resume editing, double-click on the text.

## 2.10. Clock Object

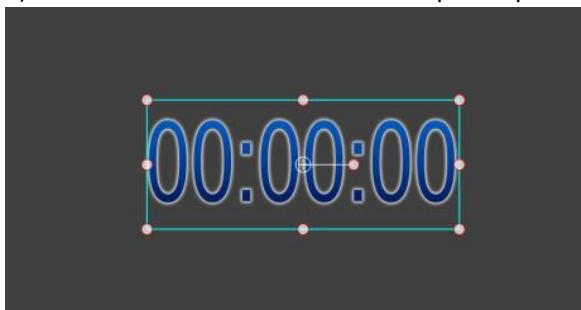

- To create:

- 1) Click on the "Clock" button.

**Note:** The "Clock" button offers various choices, from the drop-down menu you can select "numbers" or "time code".

- 2) In the still editor window click on the starting position, then left click to drag the object to the appropriate size.
- 3) Release the mouse button to complete operation.

- 4) Setting clock time parameters:

1. Using the system time, the default length can be adjusted freely, with the default set at 4 seconds.

<input checked="" type="radio"/> System Time	<input type="radio"/> Counting	<input type="radio"/> Count Down		
Format	H	M	S	F
Time Start	0	0	0	
End Time	0	0	3	49
Play Duration	0	0	4	0
Stay Time	0	Frame		

2. Set countdown time as shown below. Default is set at 4 seconds.

<input type="radio"/> System Time	<input type="radio"/> Counting	<input checked="" type="radio"/> Count Down		
Format	H	M	S	F
Time Start	0	10	0	
End Time	0	9	56	1
Play Duration	0	0	4	0
Stay Time	0	Frame		

Enter start time values. The default time is set as 0:00

<input type="radio"/> System Time	<input type="radio"/> Counting	<input checked="" type="radio"/> Count Down		
Format	H	M	S	F
Time Start	0	0	0	
End Time	23	59	57	0
Play Duration	0	0	4	0
Stay Time	0	Frame		

**Clock object parameters:**

<input type="radio"/> System Time	<input checked="" type="radio"/> Counting	<input type="radio"/> Count Down		
Format	H	M	S	F
Time Start	0	0	0	
End Time	0	0	3	49
Play Duration	0	0	4	0
Stay Time	0	Frame		
Format	LCD Clock			
<input type="radio"/> Cut Time	<input checked="" type="radio"/> Add Time			
Display For...	HMS(00:00:00)			
Millisecond	Thousandth			
AM/PM	None			
Quartz Clock	Clock1	Regularize		
Front Label				
Back Label				
Language	English			

Timing Mode: System Time, Counting, Count Down

Start time: set the start time. Select system time to set the current system time as start time.

End Time: Set end time

Play Duration: Set play duration

Stay Time: Set stay time after playing ends

Format: Select digital clock or dial clock.

Cut Time: switch to cut-time mode

Add Time: switch to accumulate-time mode

Display Format: Select the time display format

Millisecond: Millisecond

AM/PM

Quartz clock: Choose the clock

Front Label: Enter text before the clock

Back Label: Enter text after the clock

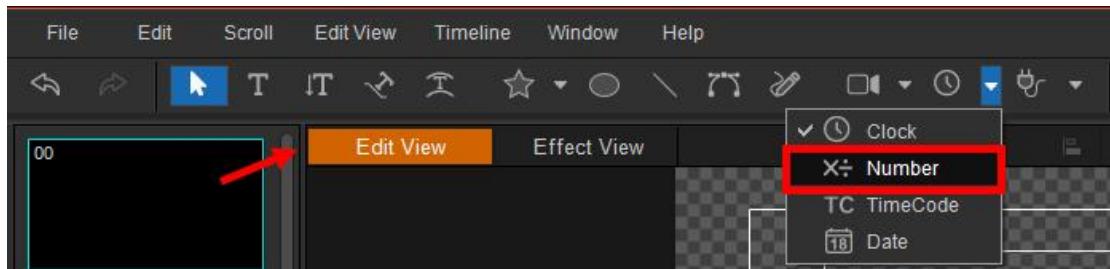

Language: Select language

Example:

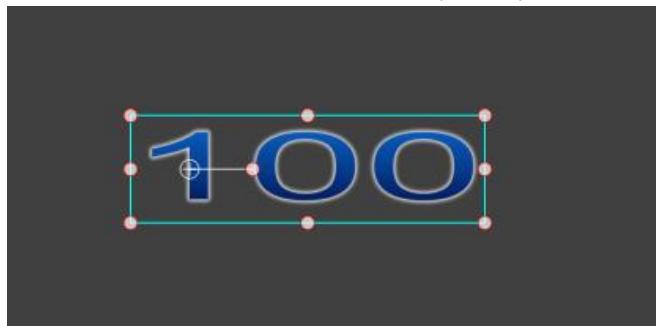

## 2.11. Number Object

- To create:
  - Click on the "Number" button.

- 2) In the still editor window click on the starting position, then left click to drag the object to the appropriate size.
- 3) Release the mouse button to complete operation.

#### Number object parameters

Start Value	100	<input checked="" type="checkbox"/> Interpolation	Start value: Set start numerical value
End Value	0	<input type="button" value="Play Duration"/>	End value: Set end value
Stay Time	0	Frame	Stay Time: Set the stay time after playing ends
Decimals	0		Decimal: set decimal number values
Minimum Digits	1		Minimun Digits: set smallest whole number
Display Format	Number	<input type="button"/>	Display Format: Select the display format, including numerical values, spelling, percentage, etc.
<input type="checkbox"/> Thousand Separator			Thousand Separator: Choose separator style
Separator Symbol	,	(Comma)	
Front Label			Front Label : Text to the left
Back Label			Back Label : Text to the right
Language	English	<input type="button"/>	Language: Select language

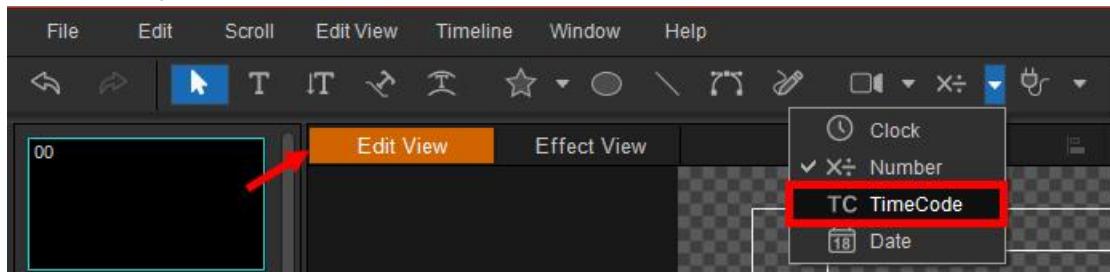

Examples:

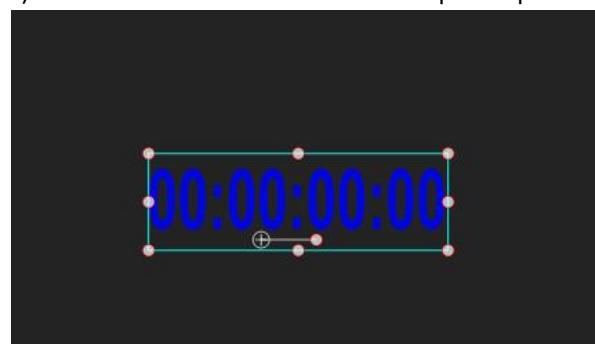

## 2.12. Timecode

- To create:

- In the Object menu bar, click on the "Timecode" button.

- In the still editor window click on the starting position, then left click to drag the object to the appropriate size.
- Release the mouse button to complete operation.

Timecode object parameters

<input type="radio"/> Current TimeCode <input checked="" type="radio"/> Start Value Start Value      00:00:00:00  <input checked="" type="radio"/> Play Duration <input type="radio"/> Interpolation Play Duration      00:00:02:00  Stay Time      00:00:00:00  Display Fo...      HMSF(00:00:00:00) <input type="checkbox"/> Drop Frame TimeCode...      Current Project  Front Label  Back Label	<p>Current Time Code:Timeline scale when playing</p> <p>Start Value: Custom timecode starting value</p> <p>Play Duration: Set the playback length of TimeCode objective</p> <p>StayTime: Set the stay time of TimeCode objective</p> <p>Display Format: select format.</p> <p>TimeCode Base</p> <p>Front Label: Text to the left</p> <p>Back Label: Text to the right</p>
--	---

Set start time code:

1. Current Time Code mode:

Set to Current Time Code mode, modulate deviance, but default length are unchangeable.

<input checked="" type="radio"/> Current TimeCode	<input type="radio"/> Start Value
Offset      00:00:00:00	

2. Start Time Value mode:

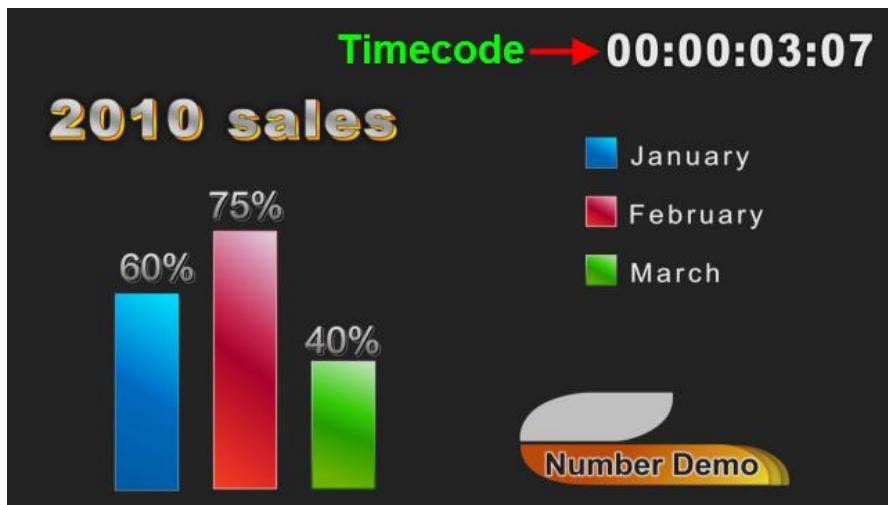

When selecting Default Length, default length can be changed.

<input type="radio"/> Current TimeCode	<input checked="" type="radio"/> Start Value
Start Value      00:00:00:00	
<input checked="" type="radio"/> Play Duration	<input type="radio"/> Interpolation
Play Duration      00:00:02:00	
Stay Time      00:00:00:00	

3. When selecting Keyframe Interpolation, end time code can change.

<input type="radio"/> Current TimeCode	<input checked="" type="radio"/> Start Value
Start Value      00:00:00:00	
<input type="radio"/> Play Duration	<input checked="" type="radio"/> Interpolation
End Value      00:00:00:00	
Stay Time      00:00:00:00	

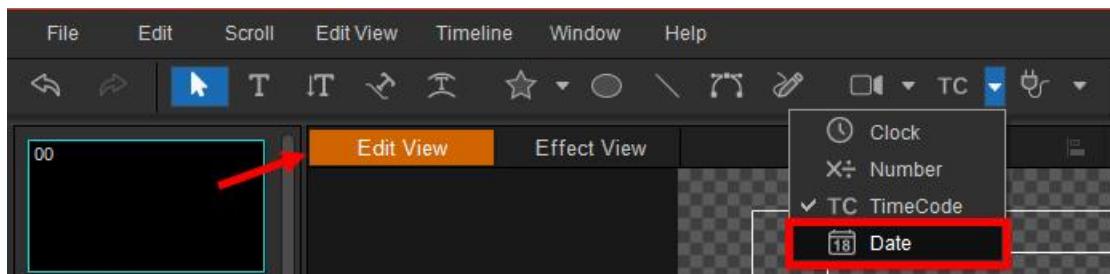

Examples:

## 2.13. Date Object

- To create:

- Click on the "Date" button.

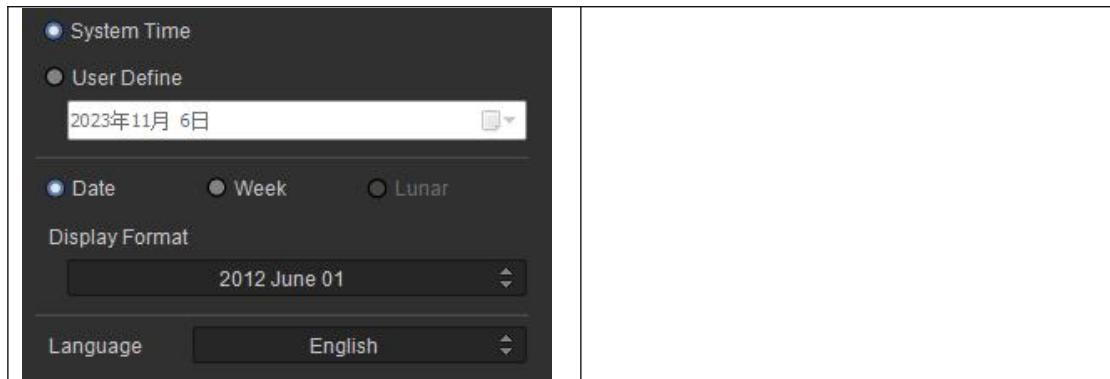

- In the still editor window click on the starting position, then left click to drag the object to appropriate size.

- Release the mouse button to complete operation.

Date Object Parameters

	Select “System Time” to set the current system time as start time. Select “User Define” to set time as needed. Select the display format <b>Display Format:</b> select date format <b>Language:</b> Select language
--	---

### Set Date

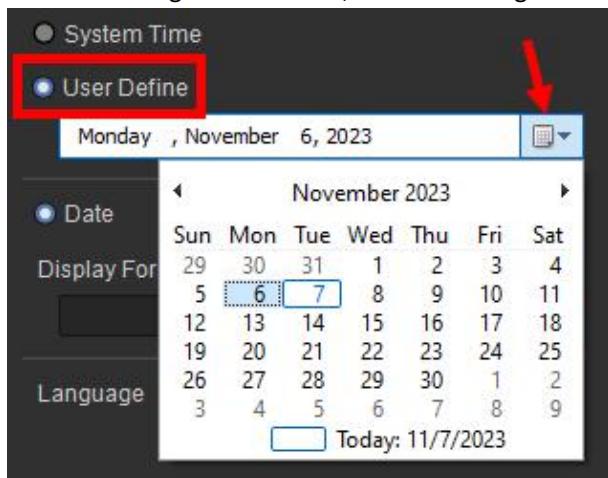

System time code:

Set to system date, and default date is unchangeable.

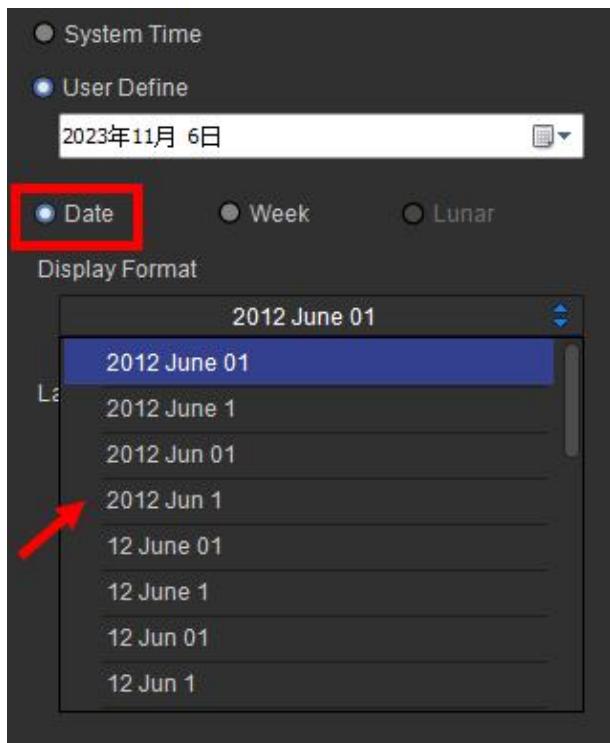

Define date code:

When selecting "User Define", date can change.

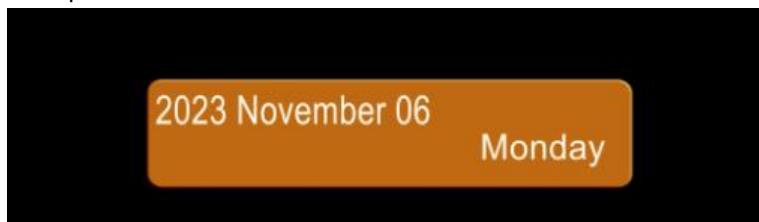

### Display Format

Choose a date format from the drop down list.

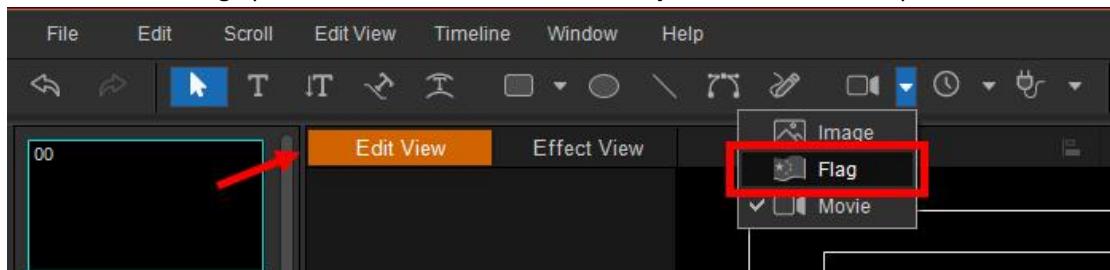

Examples:

## 2.14. Flag

- The create flag operation flow is similar to that of objects, and will not be presented here.

- Choose a flag from the Properties Window

The flag name and abbreviation will be shown below.

To find a flag, enter the full name or abbreviation into the "Find Name" field, then press [Search].

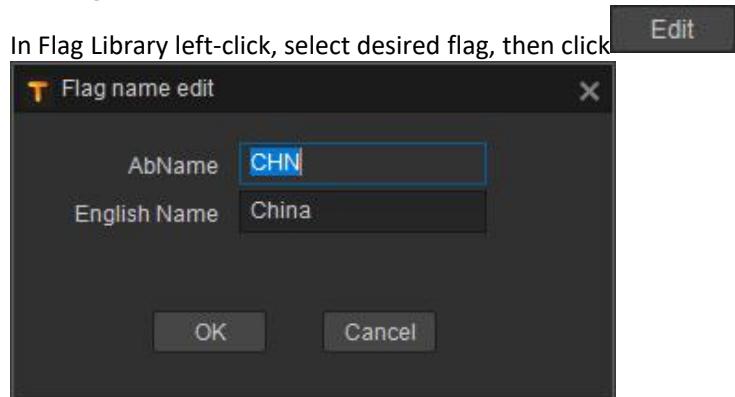

Press [Origin] to place the flag in its default position.

To find a flag, enter the full name or abbreviation into the "Find Name" field, then press [Find].

A screenshot of the 'Find Name' input field from the previous interface. The input field is highlighted with a blue background, indicating it is the active field for search input. The text 'AbName' is visible in the input field.

Edit flag:

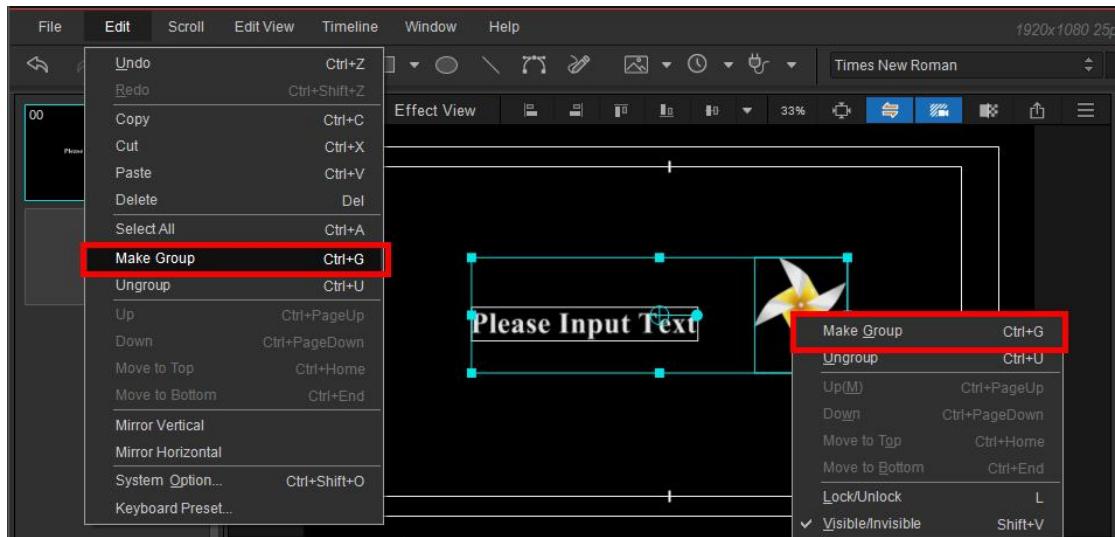

In the pop-out Edit Frame, enter property parameters, click OK.

## 2.15. Object Group

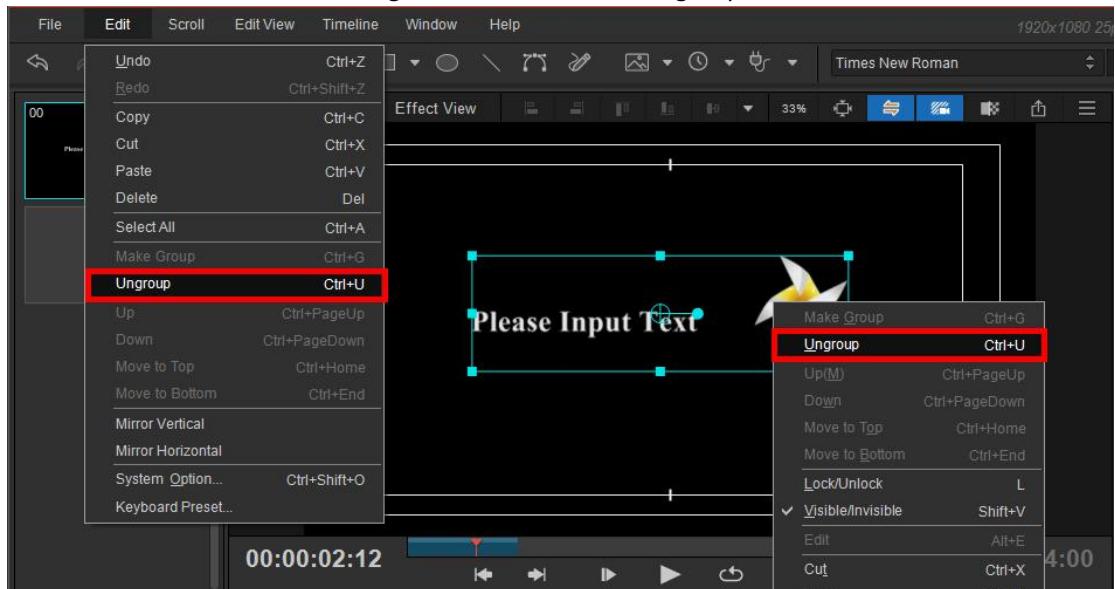

Objects groups can be used to quickly manipulate multiple objects. Use groups to:

- 1) Rescale, rotate, etc., whole groups simultaneously
  - 2) Use object groups' properties to produce different play effects.
- Make Group:
    - a. In the Edit Screen select multiple objects/text, then use the shortcut Ctrl+G
    - b. In the Edit Menu Bar choose [Make Group]
    - c. In the Edit Screen, right-click, then choose Make Group from the context menu

■ Undo Group:

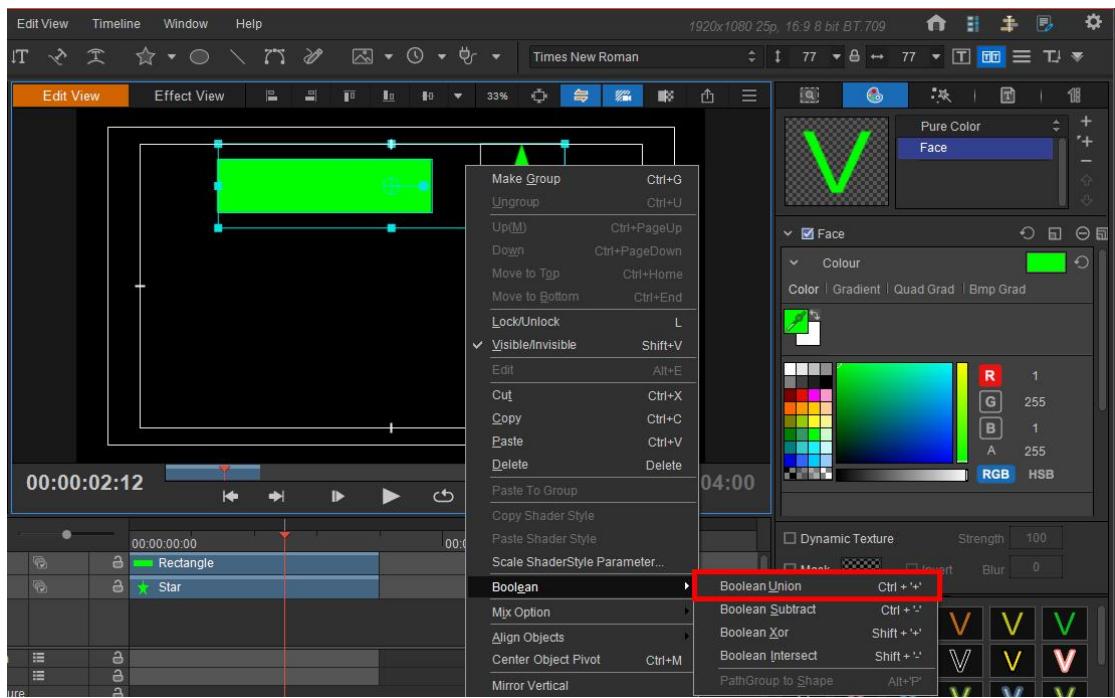

- In the Edit Screen select the group, then use the shortcut Ctrl+U
- In the Edit Menu Bar choose [Undo Group]
- In the Edit Screen, right-click, then choose Ungroup from the context menu

## 2.16. Path Group

Path Groups use Boolean editing to create new, individualised object types.

- Choose multiple objects, then right-click or use shortcut key to apply Boolean

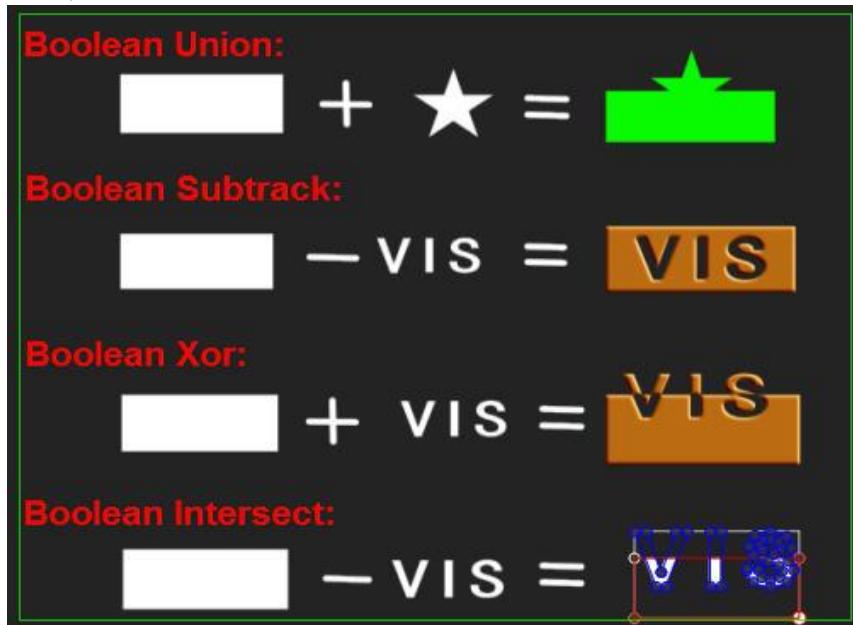

Boolean Union (Ctrl + '+') - merges two objects

Boolean Subtract (Ctrl + '-') - subtracts one object from the other

Boolean Intersect (Shift + '-') - intersect between objects remains

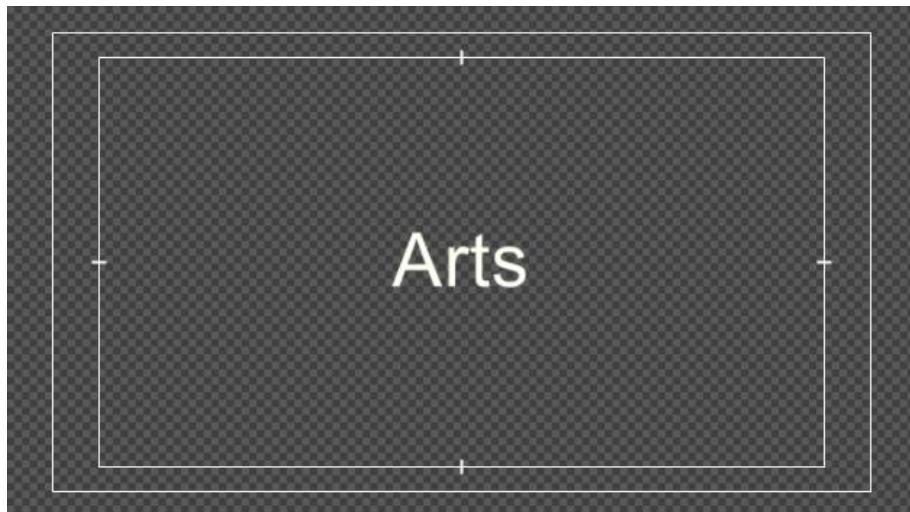

Boolean Xor (Shift + '+') - intersect between objects is removed

Example:

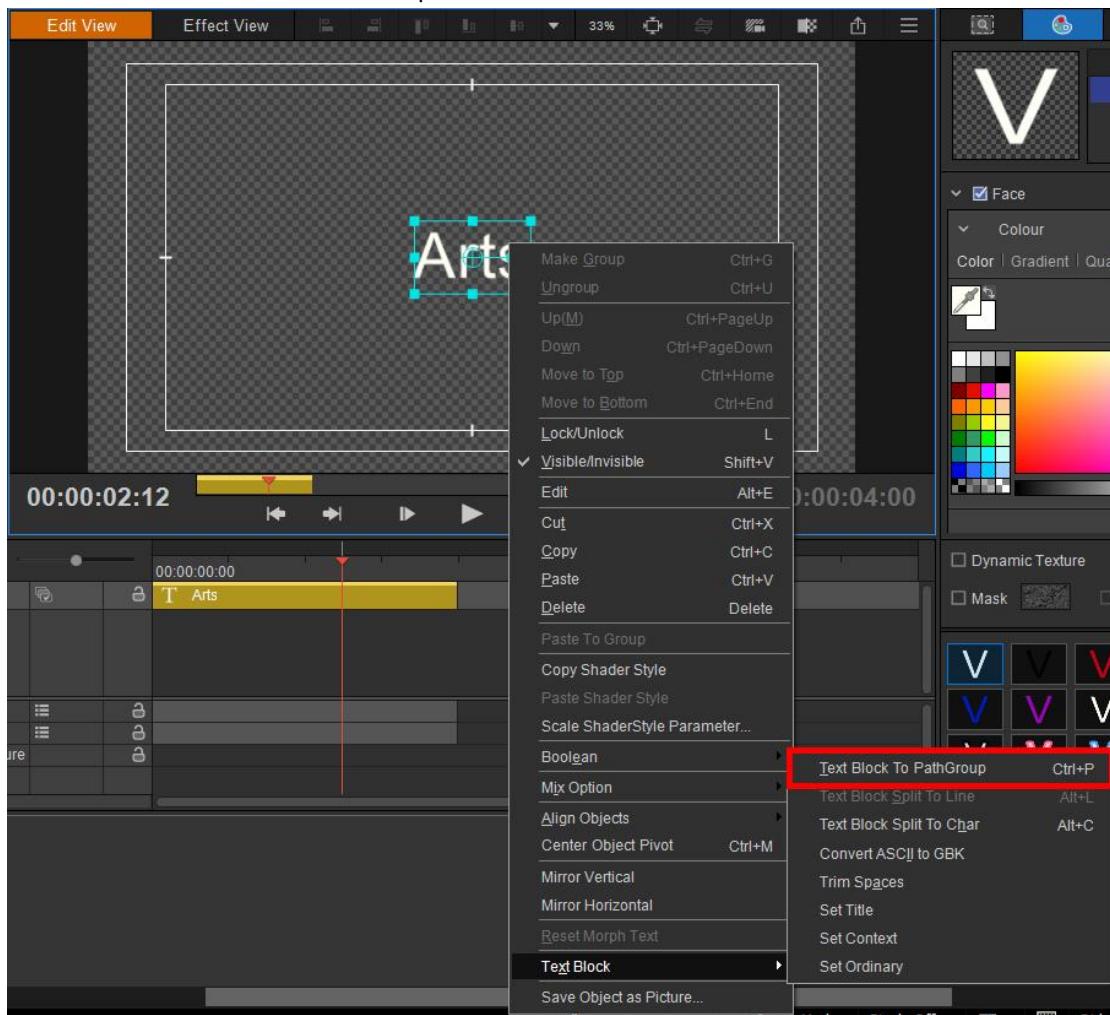

- To apply artistic effects to normal text, you can turn it into a Path Group.

- Create normal text

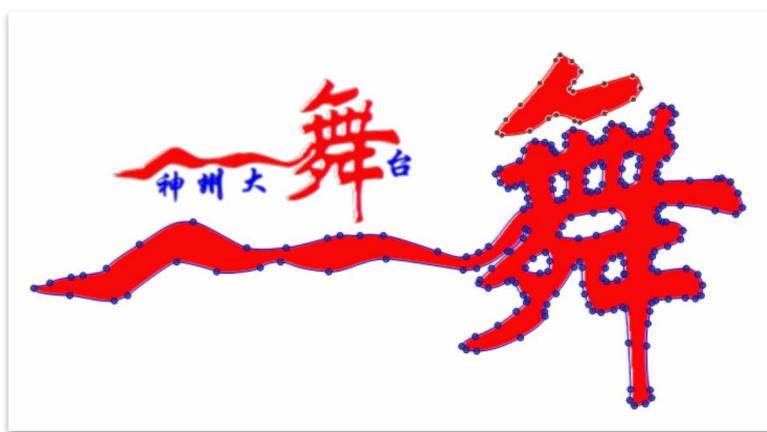

- 2) Transform normal text into Path Group by typing **Ctrl+P** or right-click then choose "Text Block"- "Text Block to Path Group"

- 3) Double-click on the Path Group to edit

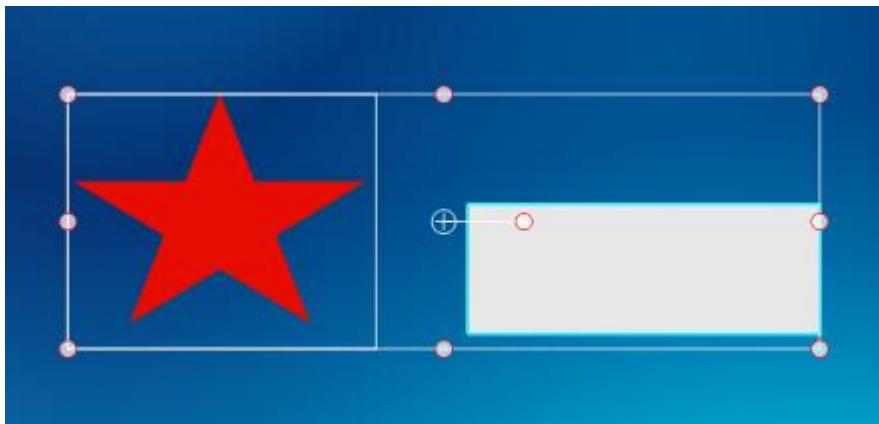

Example

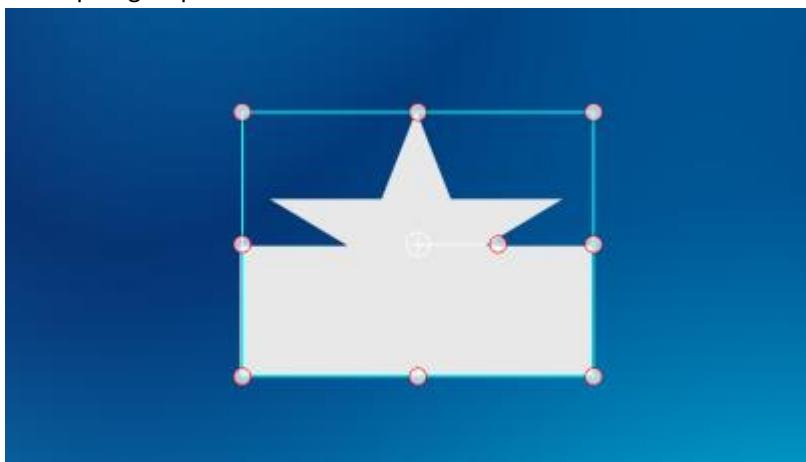

## 2.17. PathGroup to Object

1. Create objects and save them as PathGroup

Two objects

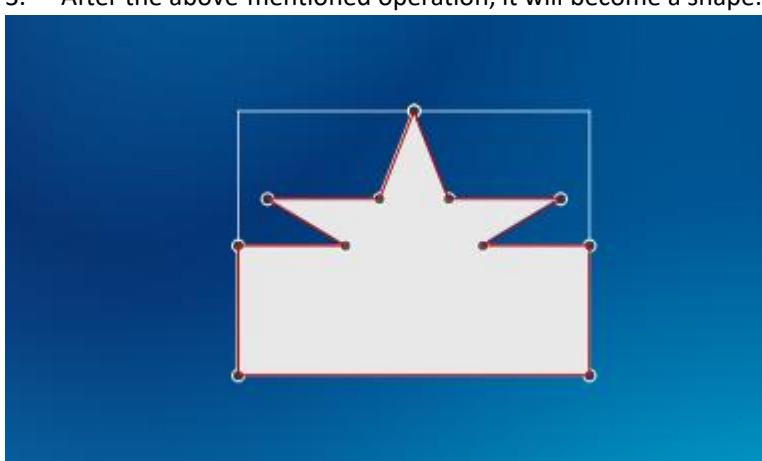

Adjust the position of objects and save them as Pathgroup with “Boolean” option. Please check pathgroup section for detailed information.

2. Right click on the pathgroup and select “PathGroup to Shape” in the right click menu, or use hotkey “Alt+P”.

3. After the above-mentioned operation, it will become a shape.

# Chapter Three Applying Shader

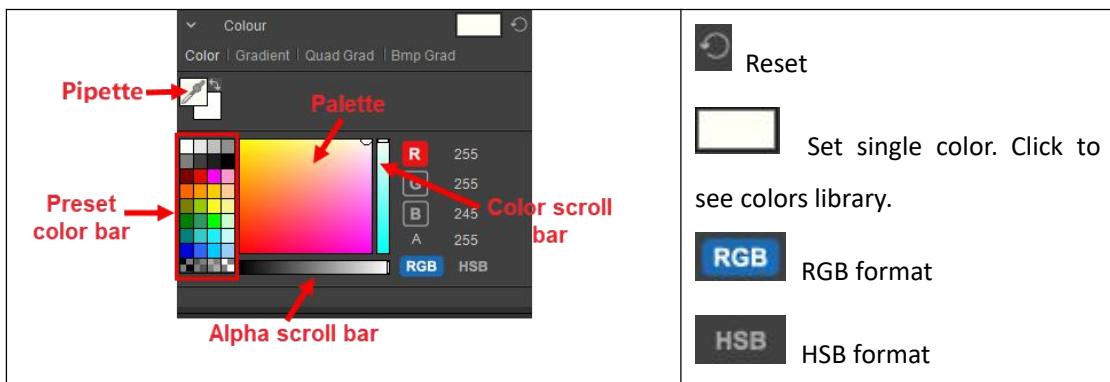

## 3.1. Shader Properties

Shader properties include: Color, Texture, Linear sheen, Bitmat sheen, Bump bitmap, Concave, and Bevel. An object's Face, Edge, Shadow and Depth have similar properties, allowing for different combinations.

### 3.1.1. Colors

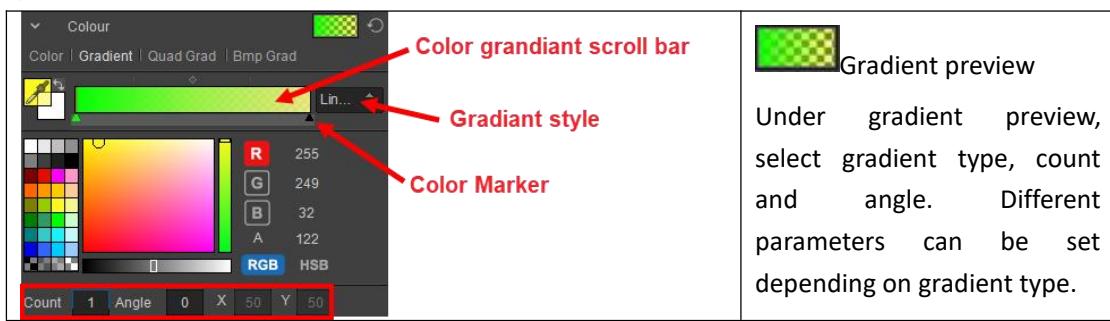

You can set Colors as: Color, Gradient, QuadGradient, BmpGradient

#### ◆ Color

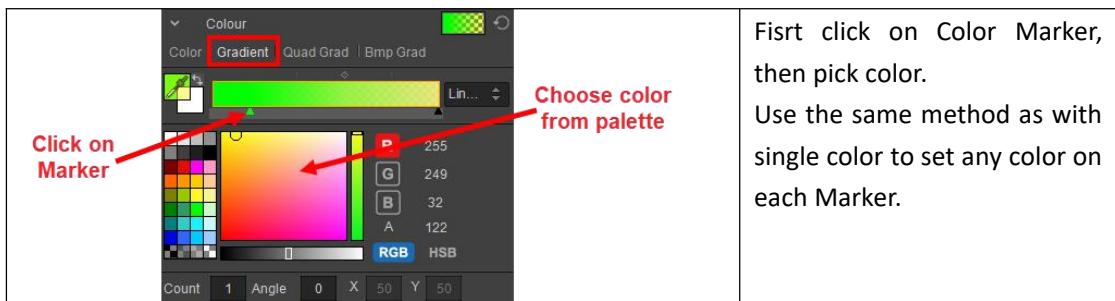

1. Choose one of the 32 preset colors
2. Use the cursor to pick a color from the palette
3. Set parameters in the RGB Alpha fields
4. Use the scroll bar
5. Use the pipette

#### ◆ Gradient Color

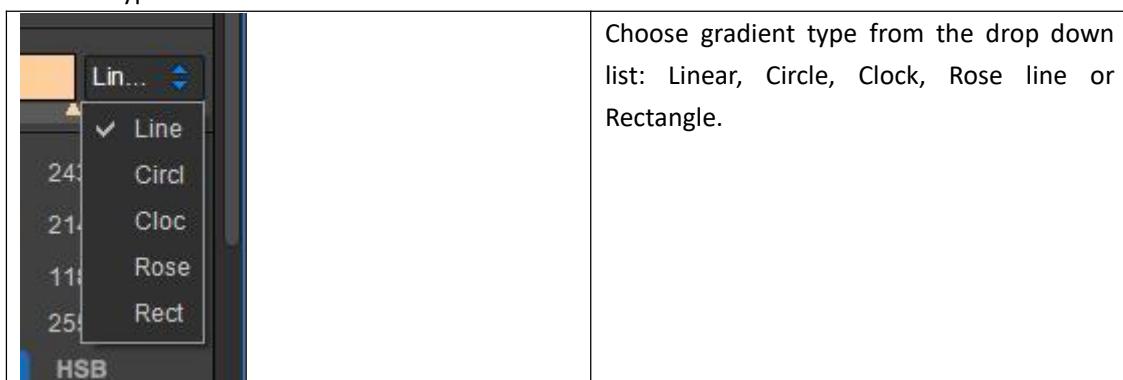

Set gradient

#### Adding, deleting and moving Color Markers:

	Click under the gradient color bar to add a Marker, drag to set position. Press [Delete] to remove Marker.
	Set the central position between colors using the blurred block over the gradient color bar.
Count <b>2</b> Angle <b>90</b> X <b>50</b> Y <b>50</b>	Change Count, Angle, and XY parameters by imputing numbers directly or dragging the cursor left-right.

#### Gradient type

Choose gradient type from the drop down list: Linear, Circle, Clock, Rose line or Rectangle.

#### Linear gradient

#### Example

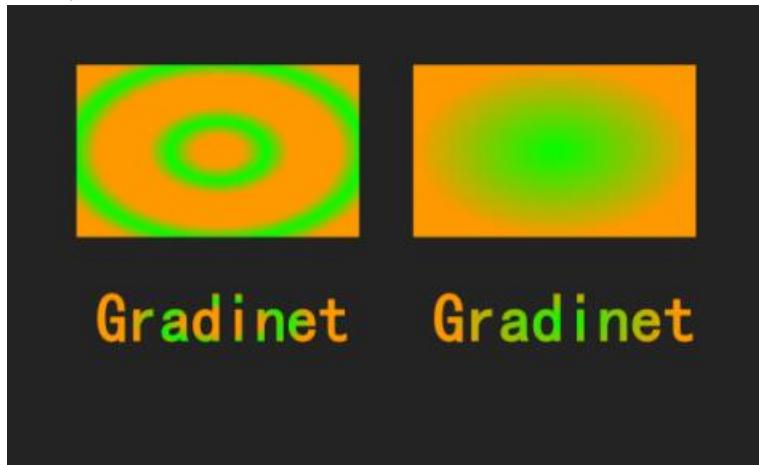

Circle gradient

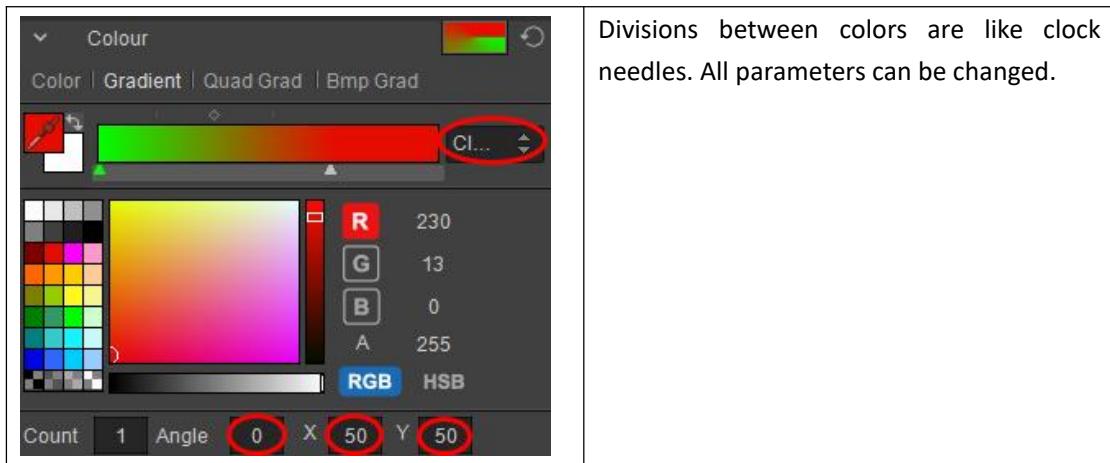

A screenshot of a color editor interface. At the top, there's a dropdown menu labeled "Colour" with a color swatch and a circular icon. Below it are tabs for "Color", "Gradient", "Quad Grad", and "Bmp Grad". The "Gradient" tab is selected. In the center, there's a color picker with a horizontal slider showing a gradient from green to orange. To the right of the slider is a dropdown menu with "Cir..." highlighted. On the left is a color palette with various color swatches. On the right, there are color channels (R, G, B) set to 255, 153, 0 respectively, and an alpha channel (A) set to 255. Below these are buttons for "RGB" and "HSB". At the bottom, there are controls for "Count" (set to 3), "Angle" (set to 90), and "X" and "Y" coordinates both set to 50. The "X" and "Y" fields are circled in red.

In Circle you can only set the X,Y parameters for effect.

Example

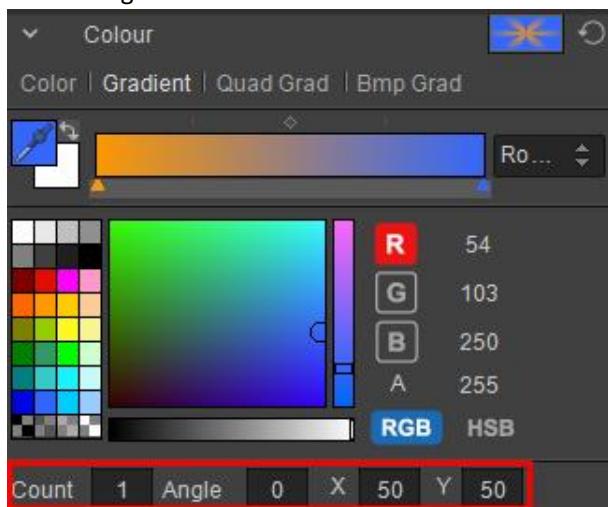

Clock gradient

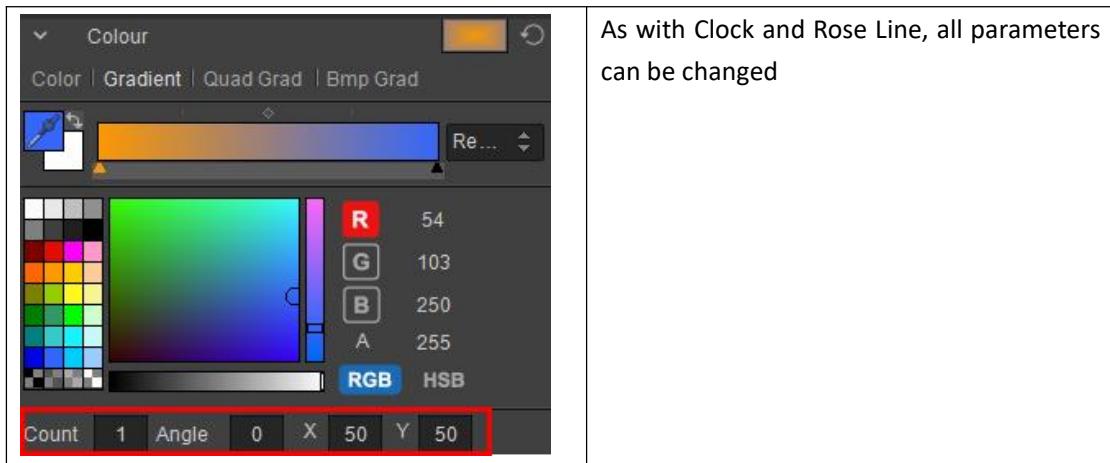

Example:

Rose Line gradient

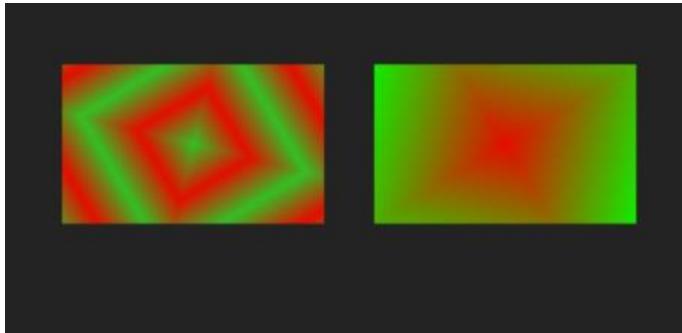

Example:

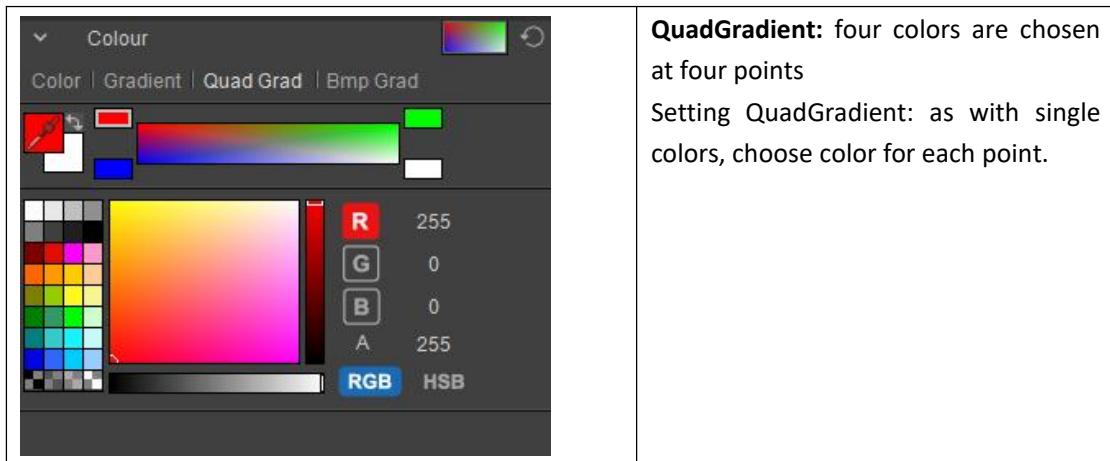

As with Clock and Rose Line, all parameters can be changed

Example:

#### ◆ QuadGradient

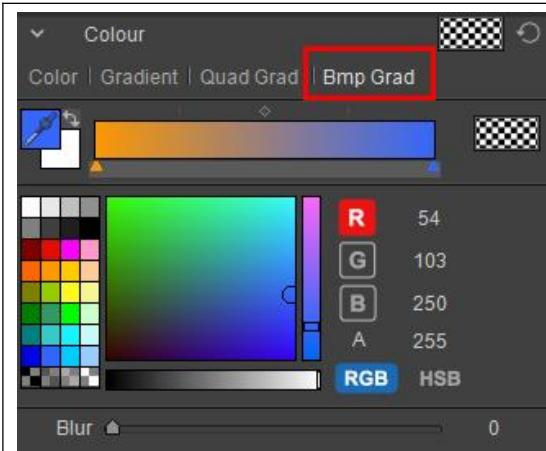

**QuadGradient:** four colors are chosen at four points

Setting QuadGradient: as with single colors, choose color for each point.

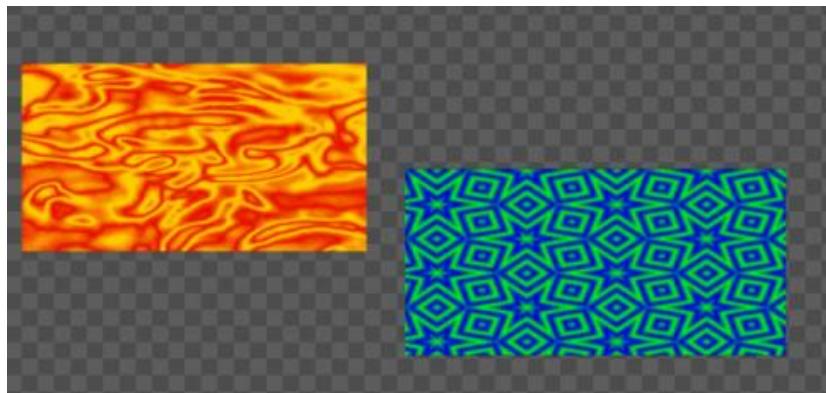

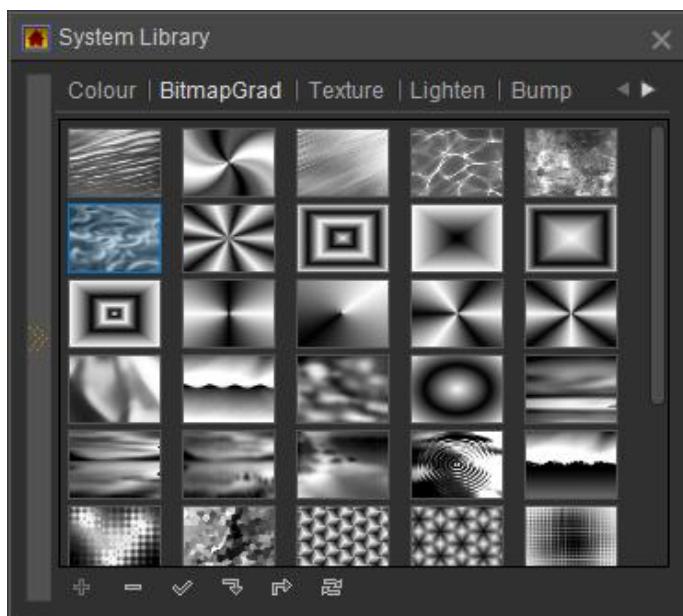

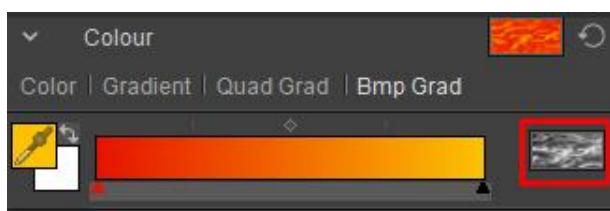

Example:

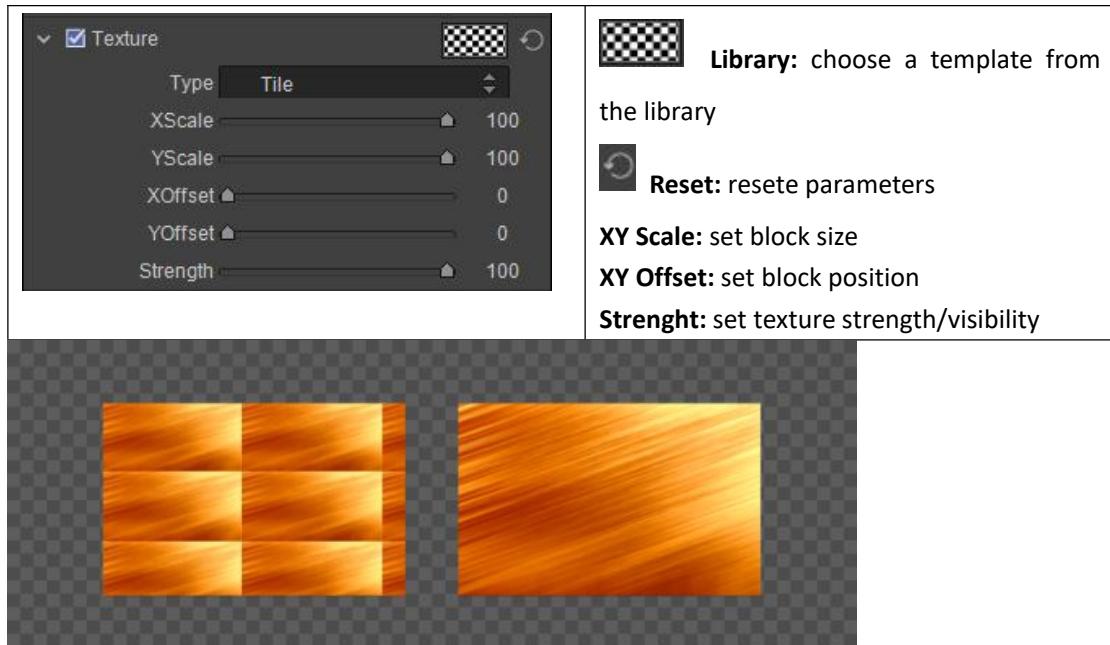

### ◆ BumpGradient

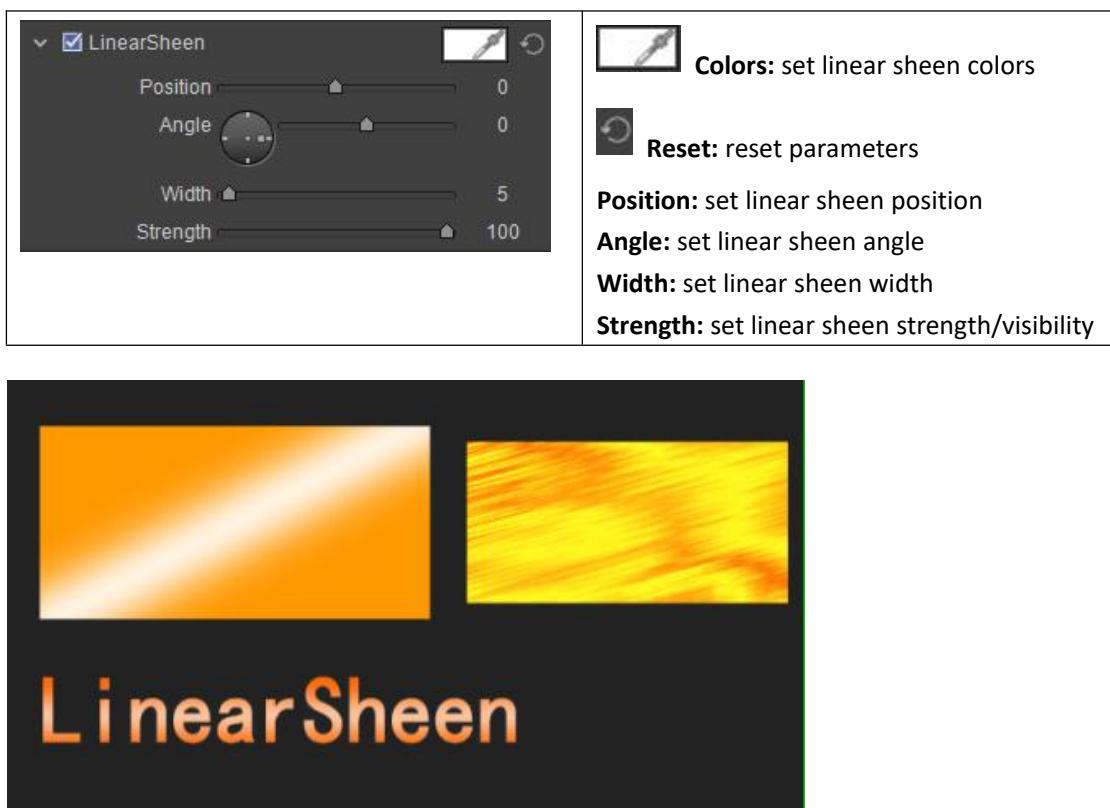

Choose a Bitmap Gradient from the System Templates Library, double-click to apply. Then set colors.

### 3.1.2. Texture

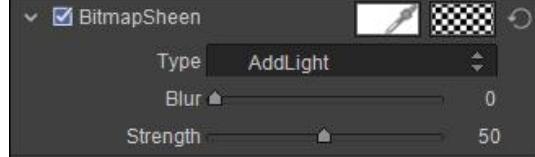

### 3.1.3. Linear Sheen

### 3.1.4. Bitmap Sheen

Addlight Type

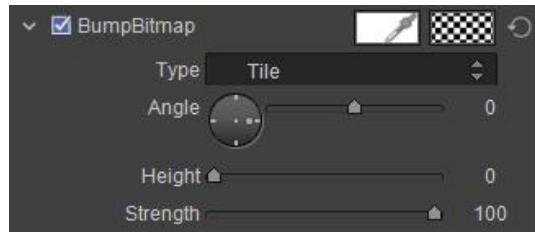

**Colors:** choose bitmap sheen color  
**Library:** choose a style from the template library  
**Reset:** reset parameters  
**Blur:** blur bitmap sheen  
**Strength:** set bitmap sheen strength

You can pick between Addlight Type and Mixlight Type

### 3.1.5. Bump Bitmap

Set Colors, Angle, Height, Strength and Type (Tile/Stretch)  
You can pick a preset template from the library.  
Press Reset to delete set parameters.

### 3.1.6. Concave

<input checked="" type="checkbox"/> Concave Mode: Raise Bright: 100 Blur: 2 Angle: 45 Height: 4	Set Colors, Style (Raise/Convave/Lightborder), Brightness, Blur, Angle and Height. Press Reset to delete set parameters.
--	---

### 3.1.7. Bevel

<input checked="" type="checkbox"/> Bevel Size: 2 Depth: 2 Angle: -45 LightDepth: 0	Set Colors, Size, Depth, Angle and Light Depth. Press Reset to delete set parameters.
---	--

### 3.2. Face

In Face you can set the following properties: **Color, Texture, Linear Sheen, Bitmap Sheen, Bump Sheen, Concave and Bevel**

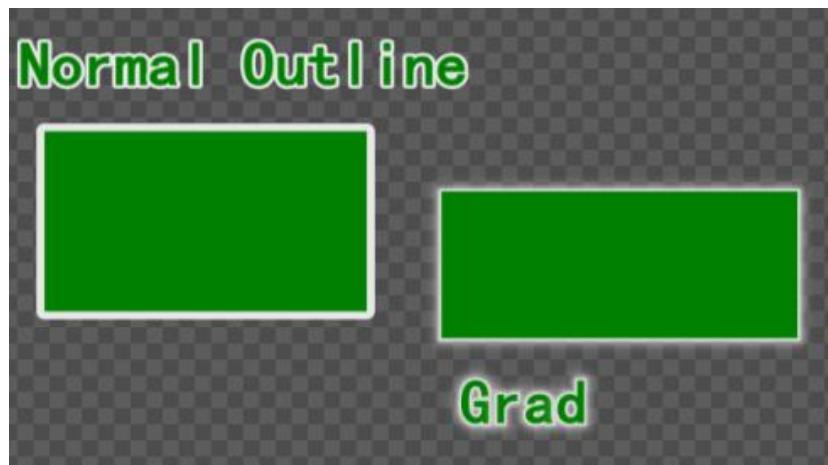

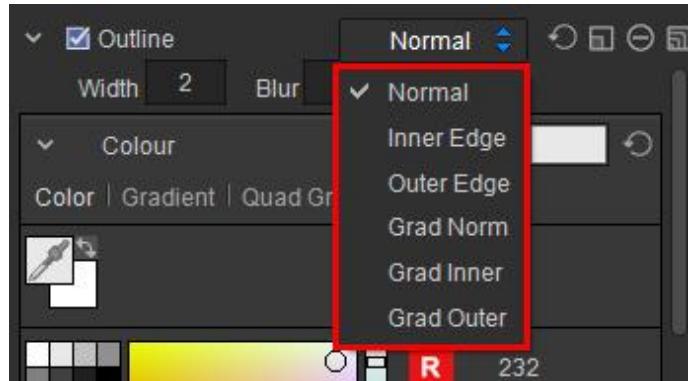

<input checked="" type="checkbox"/> Face <ul style="list-style-type: none"> <li>&gt; Colour</li> <li>&gt; <input checked="" type="checkbox"/> Texture</li> <li>&gt; <input checked="" type="checkbox"/> LinearSheen</li> <li>&gt; <input checked="" type="checkbox"/> BitmapSheen</li> <li>&gt; <input checked="" type="checkbox"/> BumpBitmap</li> <li>&gt; <input checked="" type="checkbox"/> Concave</li> <li>&gt; <input checked="" type="checkbox"/> Bevel</li> </ul>	<b>Reset:</b> resets all parameters to their original values. <b>Delete:</b> deletes Face <b>Fold/Expand:</b> Folds/Expands all Face properties <b>Fold/Expand:</b> Folds/Expands Face, Edge, Shadow, Depth properties
---	---

### 3.3. Edge

In Edge you can set the following properties: **Color, Texture, Linear Sheen, Bitmap Sheen, Bump Sheen, Convave, Bevel.**

<input checked="" type="checkbox"/> Outline <div style="display: flex; justify-content: space-between; align-items: center;"> <span>Normal</span> <span></span> <span></span> <span></span> <span></span> </div> <ul style="list-style-type: none"> <li>&gt; Width <input type="text" value="2"/></li> <li>&gt; Blur <input type="text" value="0"/></li> <li>&gt; Colour</li> <li>&gt; <input type="checkbox"/> Texture</li> <li>&gt; <input type="checkbox"/> LinearSheen</li> <li>&gt; <input type="checkbox"/> BitmapSheen</li> <li>&gt; <input type="checkbox"/> BumpBitmap</li> <li>&gt; <input type="checkbox"/> Concave</li> <li>&gt; <input type="checkbox"/> Bevel</li> </ul>	As with Face you have Reset, Delete and Fold/Expand properties. Unique to Edge: <b>Width and Blur</b>
--	--

Edge has different effect types.

### 3.4. Shadow

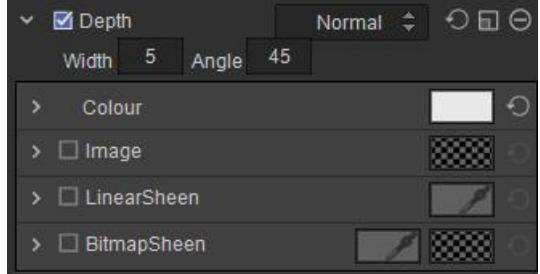

In Shadow you can set the following properties: **Color**, **Texture**, **Linear Sheen** and **Bitmap Sheen**

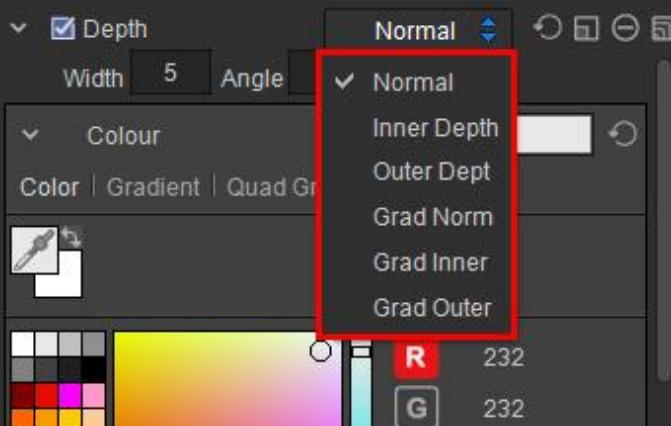

<p>The screenshot shows the 'Shadow' properties panel. At the top left is a checkbox labeled 'Shadow' which is checked. Below it are 'Width' (set to 5), 'Angle' (set to 45), and 'Blur' (set to 0) sliders. To the right are four expandable sections: 'Colour' (with a color swatch), 'Image' (with a checkerboard swatch), 'LinearSheen' (with a brush swatch), and 'BitmapSheen' (with a checkerboard swatch). At the top right of the panel are standard controls: Reset, Delete, and Fold/Expand.</p>	<p>As with Face you have Reset, Delete and Fold/Expand properties.</p> <p>Unique to Shadow: <b>Width</b>, <b>Angle</b> and <b>Blur</b> properties.</p>
---	--

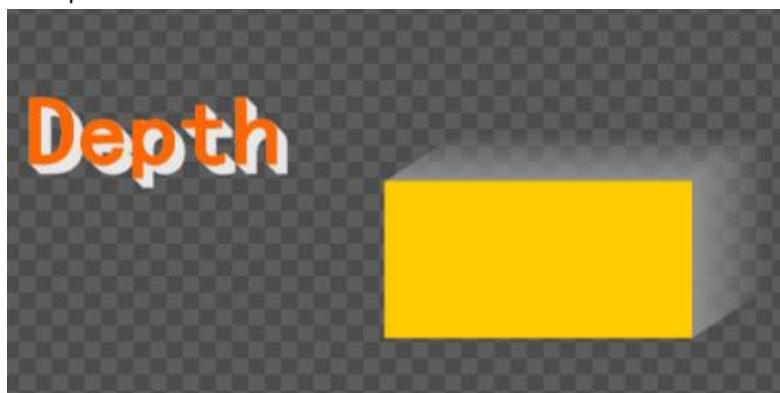

### 3.5. Depth

In Depth you can set the following properties: Color, Texture, Linear Sheen and Bitmap Sheen.

	As with Face you have Reset, Delete and Fold/Expand properties. As with Shadow you have Width and Angle properties. You can set Shadow type by clicking on the drop down list.
--	--

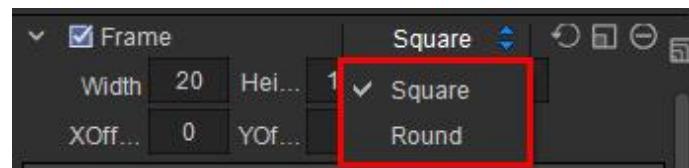

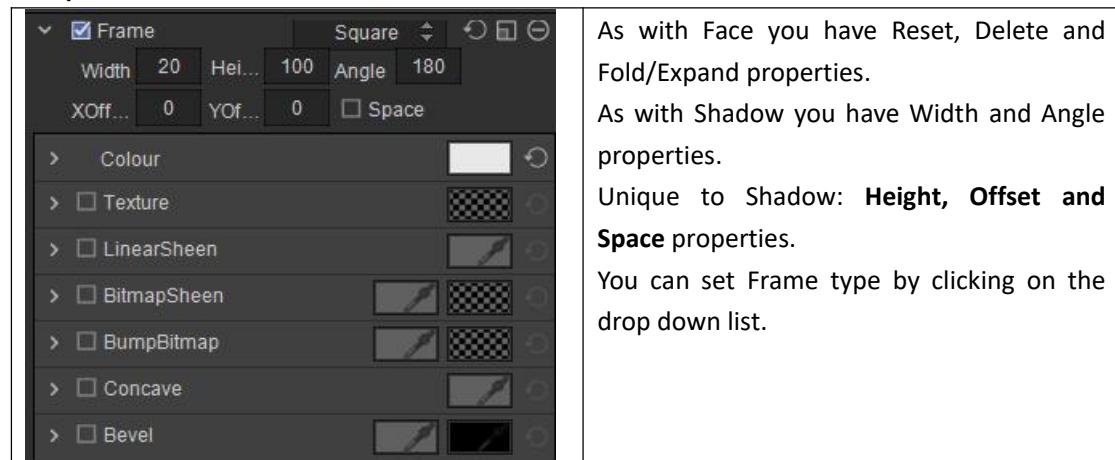

---

Example

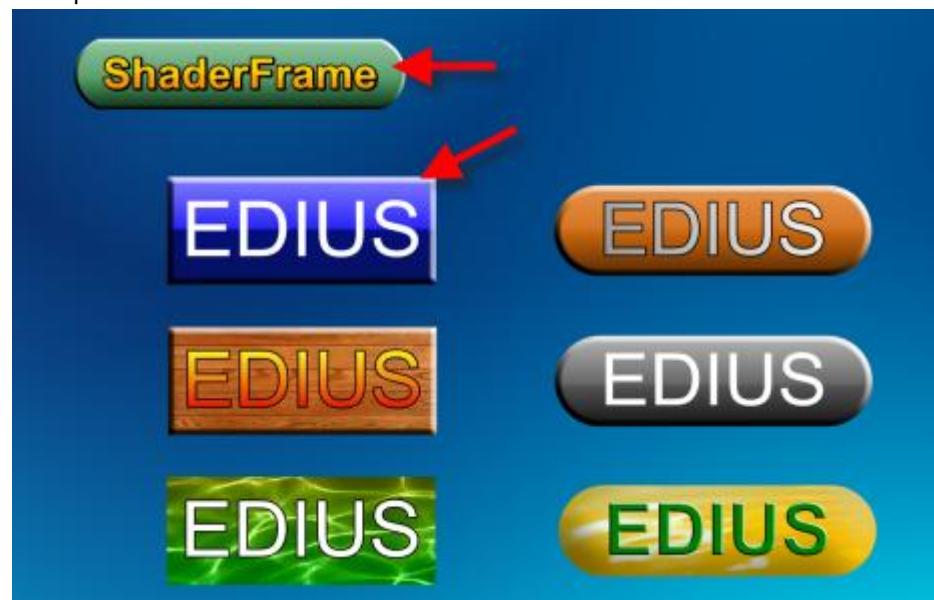

### 3.6. Frame

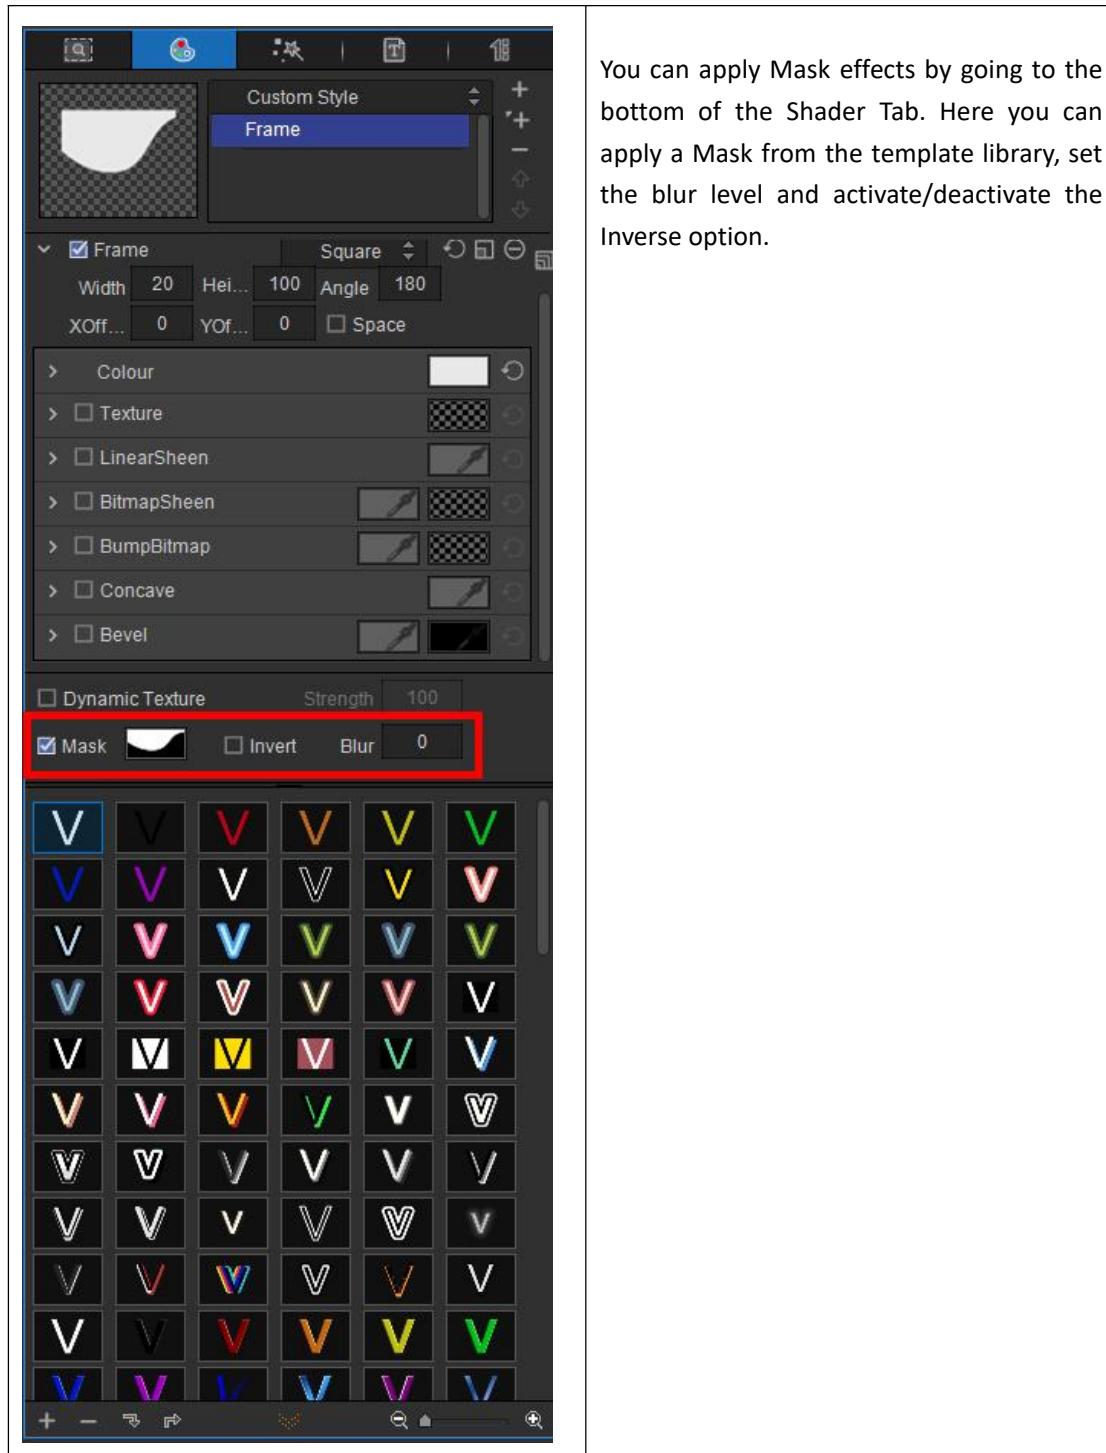

In Frame you can set the following properties: **Color**, **Texture**, **Linear Sheen** and **Bitmap Sheen**, **Bump Sheen**, **Convave**, **Bevel**.

Example

### 3.7. Advanced properties

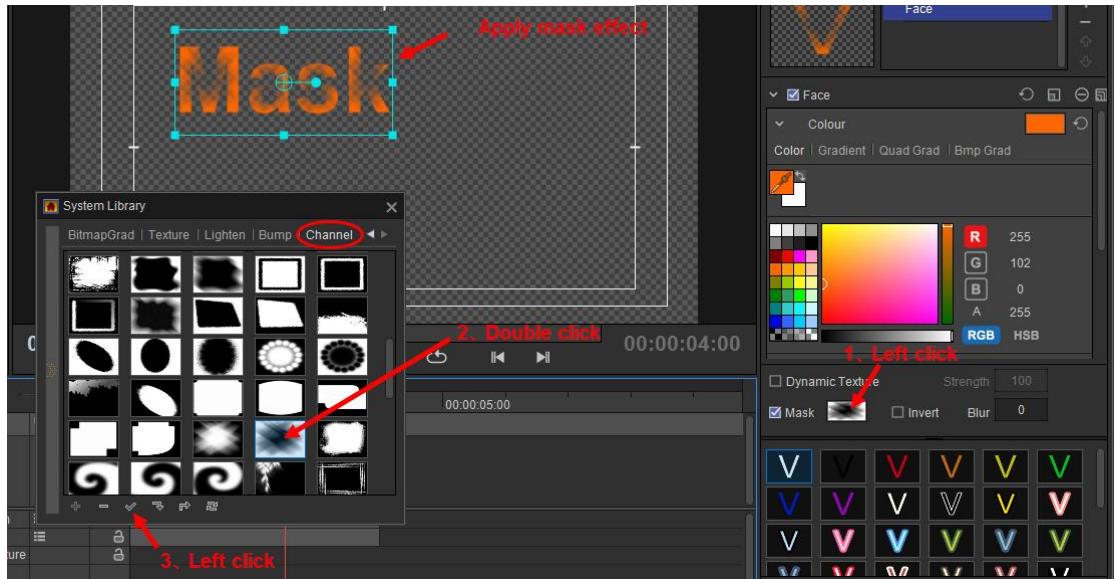

Setting Mask

- 1) Enter a text in the Edit Screen, then choose  Mask from the Shader Tab.

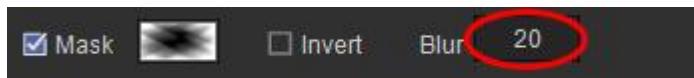

2) Click on the button to choose a template. Double-click or press to apply.

Set Mask blur parameters

Example

Use Inverse option to inverse effect.

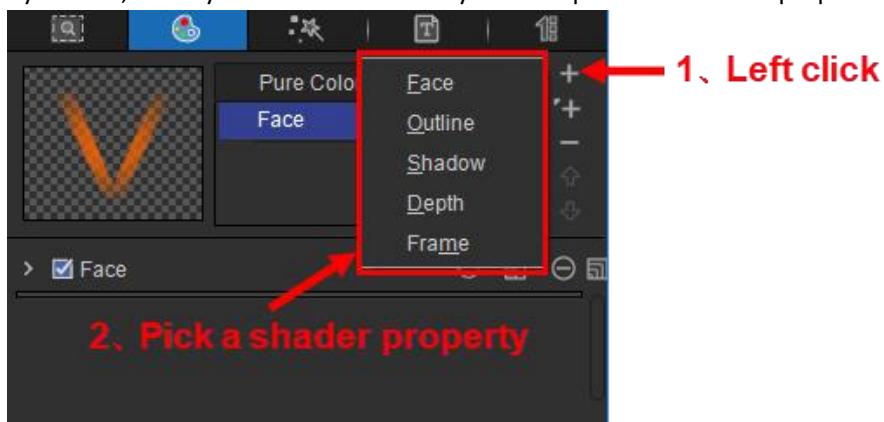

## 3.8. Editing properties

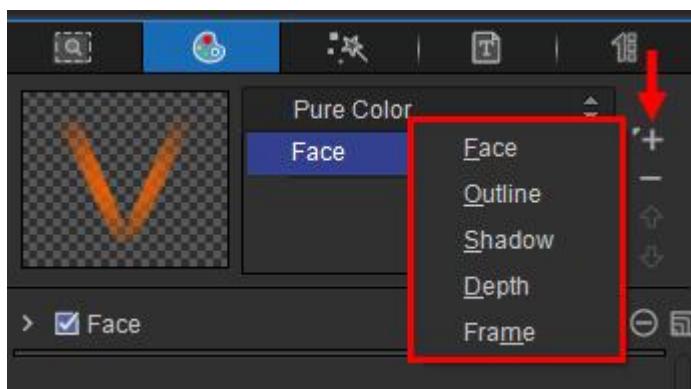

### 3.8.1. Combinations

Enter text/object on the Edit Screen, open Shader, and then pick Face, Edge and Shadow. You can also pick Shader properties first and then input text/object.

By default, when you first enter text only Face is opened. Add other properties.

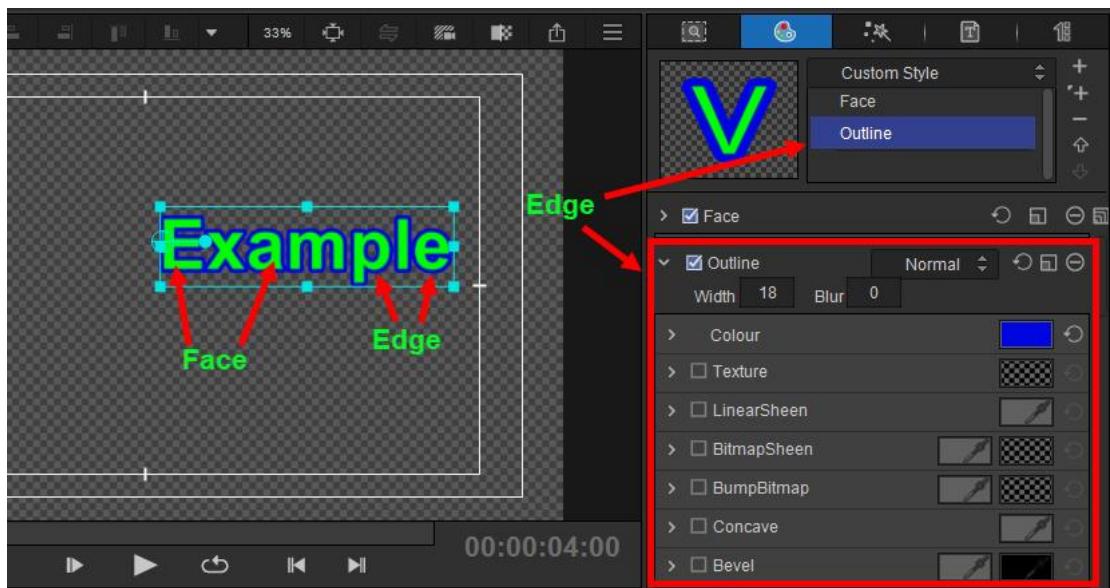

Click the "Insert" button to add Outline over Face.

Note: you can click the "Insert" button to insert a shader property over the selected property.

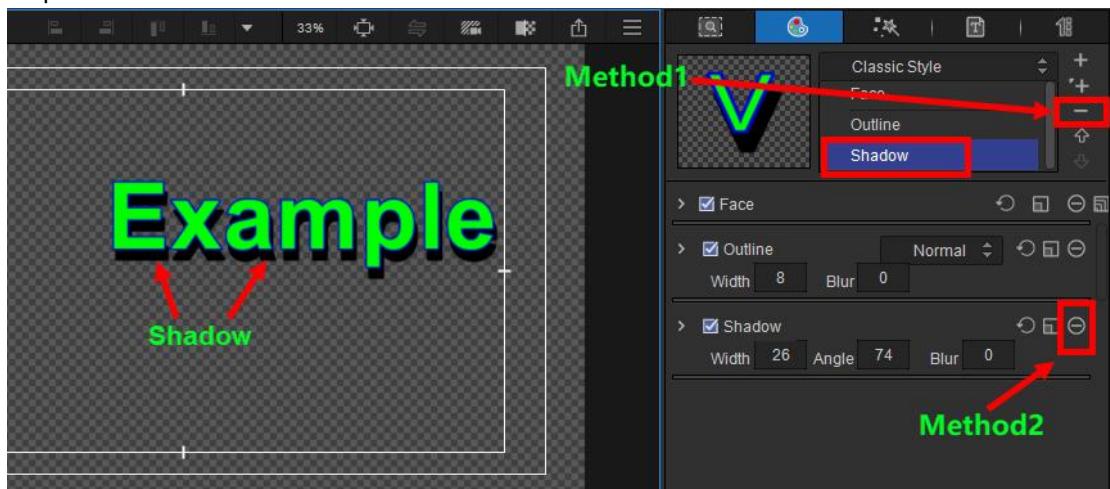

The text add a Outline property:

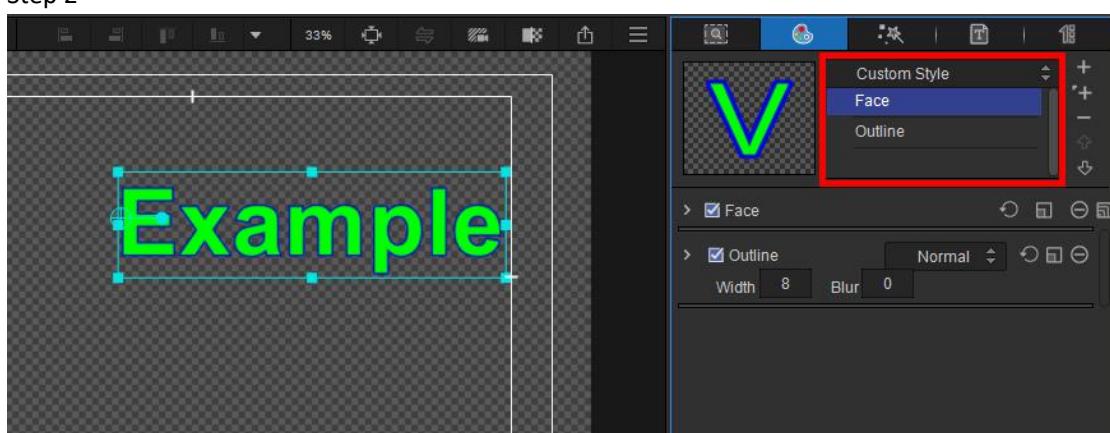

To delete a property, choose the unwanted property and then click on either of the [Delete] buttons shown in the screen below.

#### Example

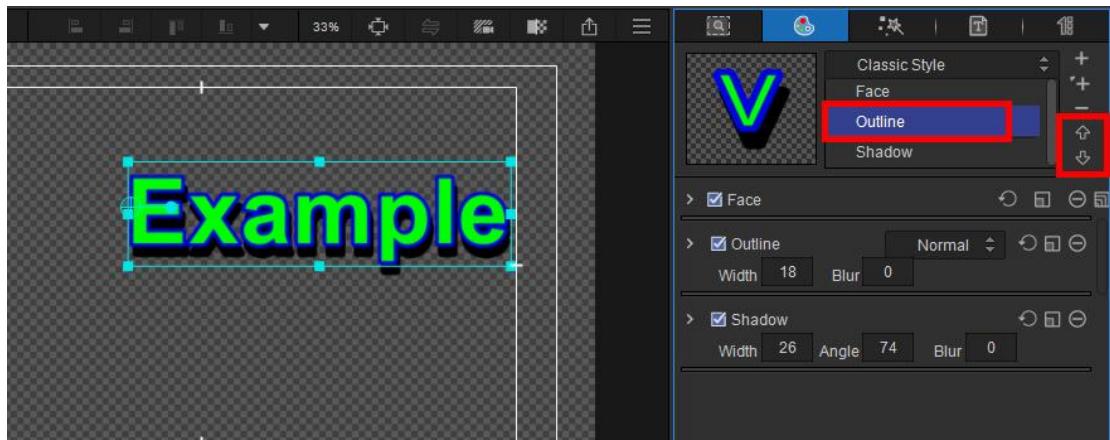

##### Step 1

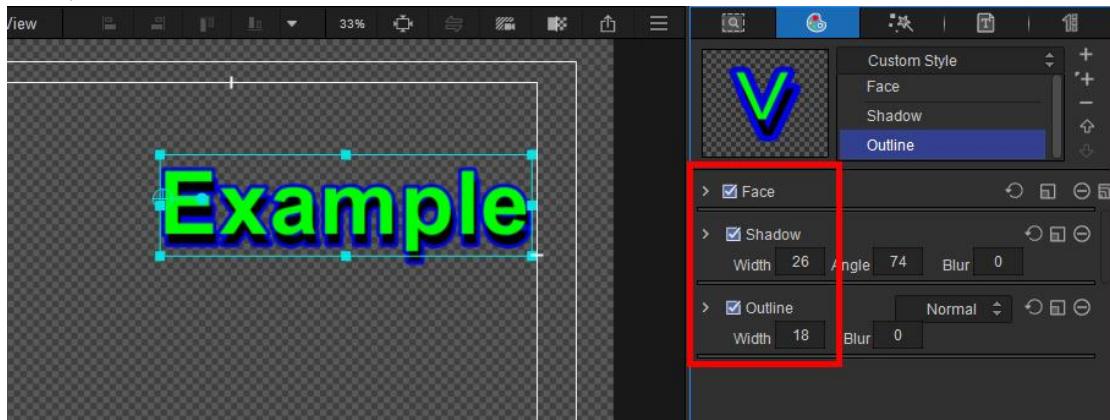

##### Step 2

Move between properties by using the mouse cursor or the [ / ] buttons

Example

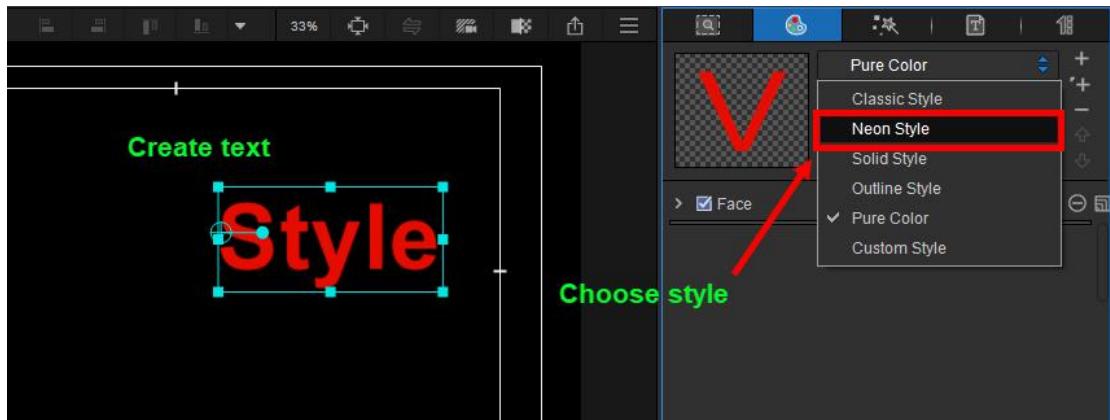

Using different properties combinations you can produce all sorts of Title effects. Example:

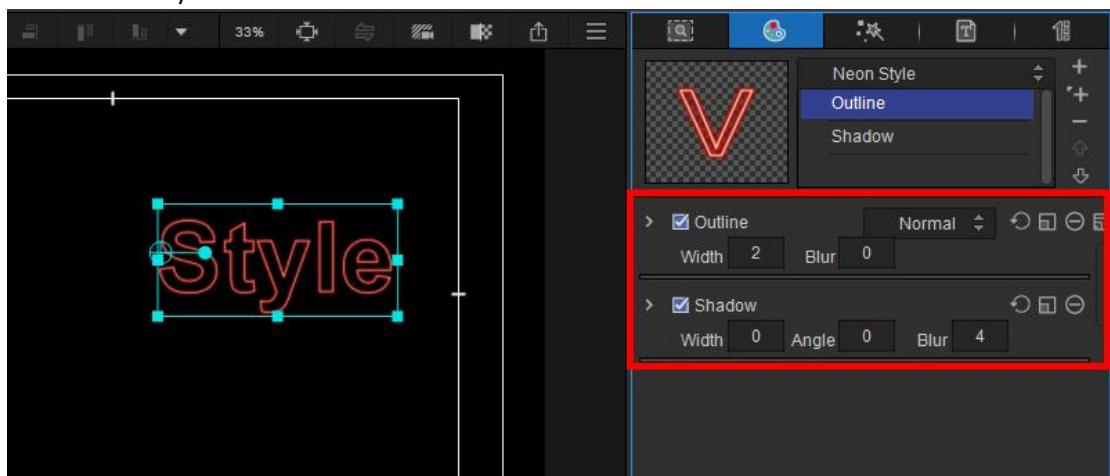

### 3.8.2. Preset Styles

You can choose a Preset Style by clicking on the drop-down list shown below.

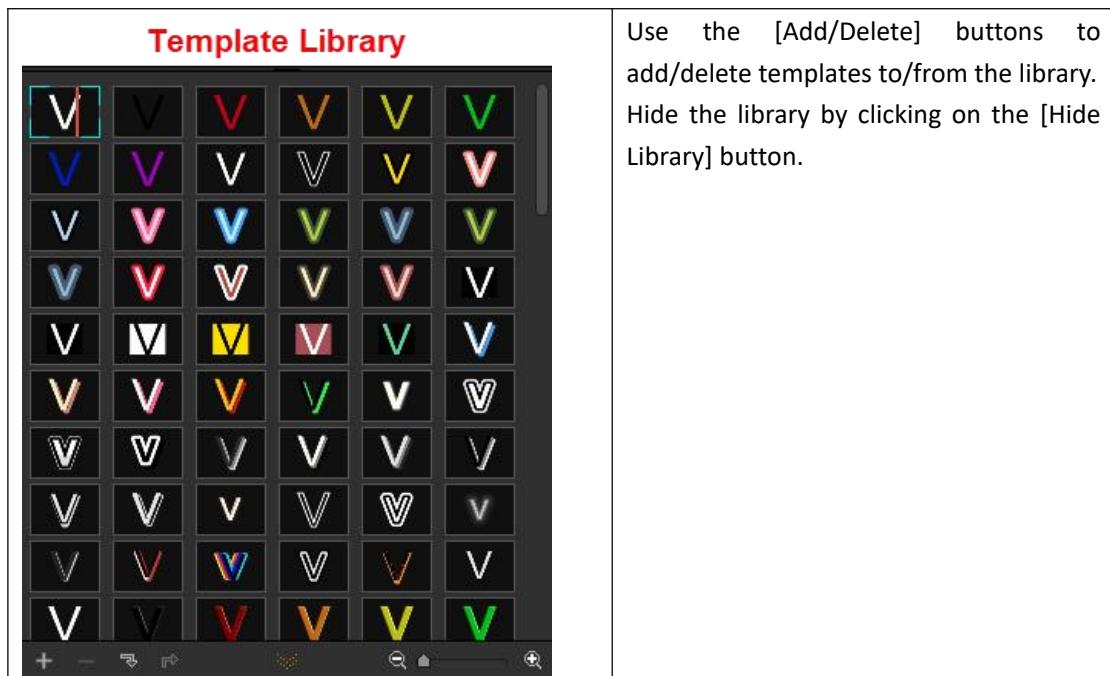

Below: neon style.

### 3.9. Shader Template Library

At the bottom of the Shader tab you can open the Templates Library by clicking the  button.

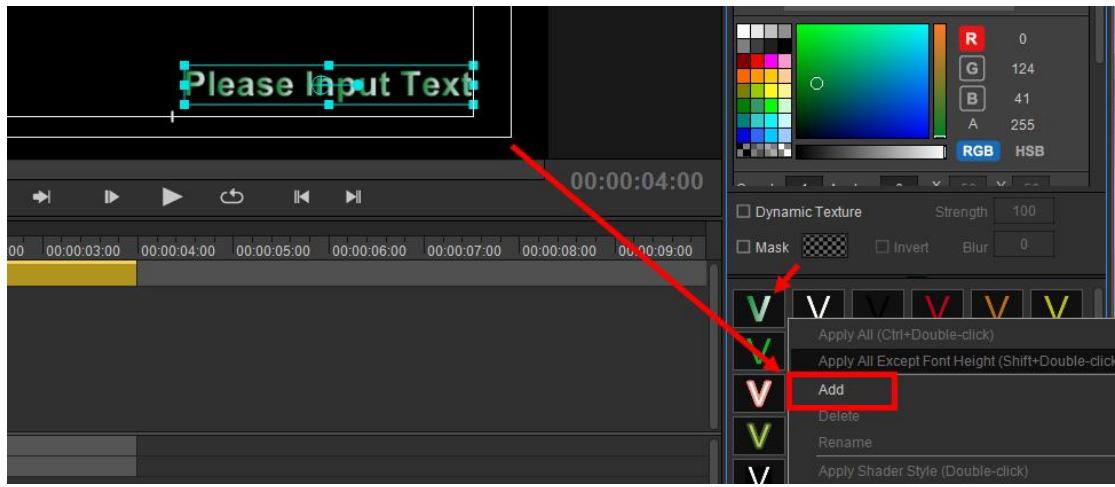

Use the [Add/Delete] buttons to add/delete templates to/from the library. Hide the library by clicking on the [Hide Library] button.

Right-click on a template to see the context menu:

Apply All (Ctrl+Double-click)	Apply All: applies shader and format properties to current text
Apply All Except Font Height (Shift+Double-click)	Apply All Except Font Height
Add	Add
Delete	Delete
Rename	Rename
Apply Shader Style (Double-click)	Apply Shader Style: applies shader properties to current text
Locate File in Explorer	Locate File in Explorer
Move Prev	Move Prev
Move Next	Move Next
Import	Import
Export	Export
Refresh	Refresh
▼ Black Background	Black Background
Grid Background	Gird Background

To add a template you can:

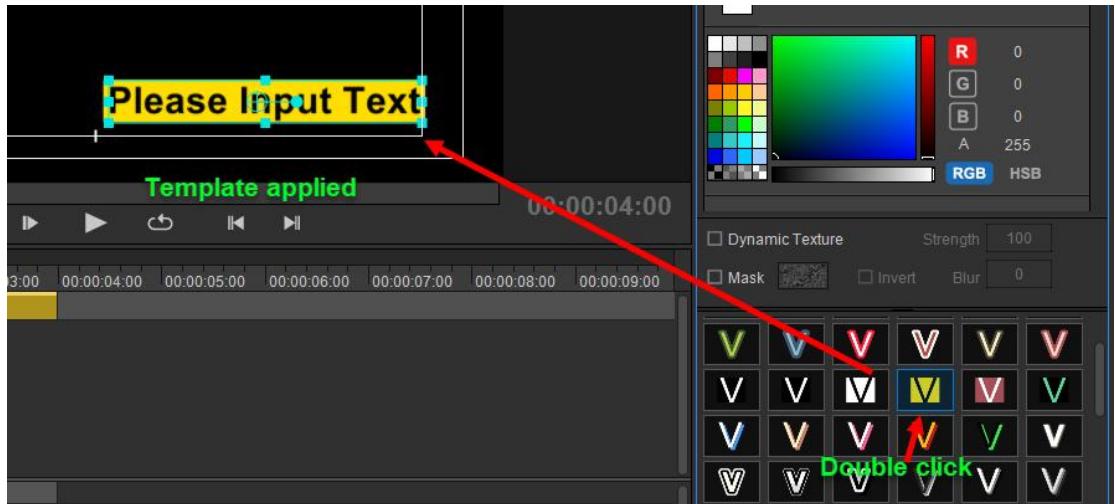

1. Press the button in the library
2. Choose Add from the options context menu.

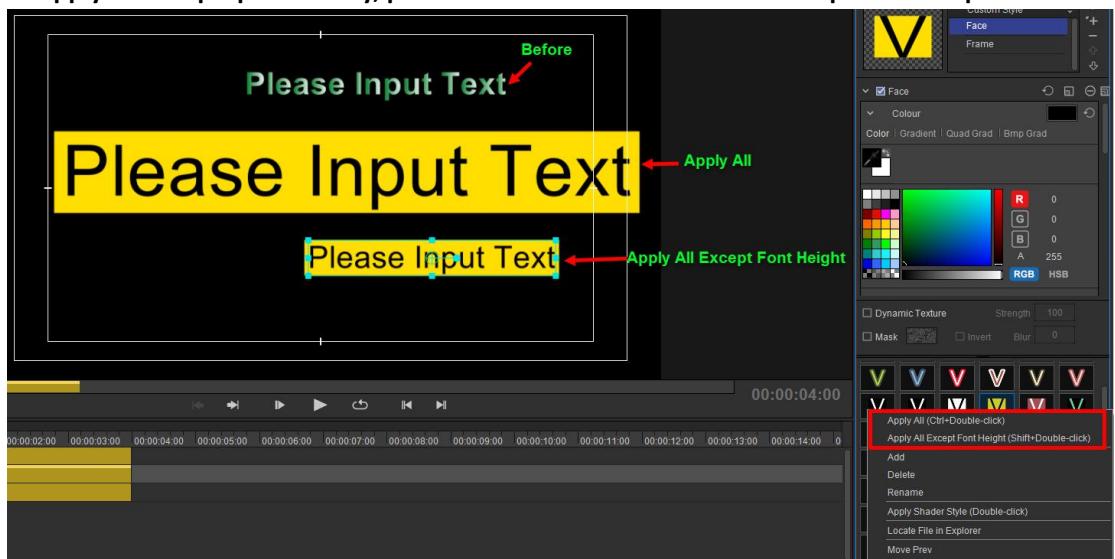

To delete a template either:

1. Press the  button in the library
2. Choose Delete from the context menu

After creating text in the Edit Screen, the easiest way to apply template properties is to double-click on the desired template.

To apply Shader properties only, press Ctrl and Double-click on the template. Example

### 3.10. Render Text

As part of the shader properties, you can choose to Render the text as a whole or letter by letter.

Render All: applies Shading effects to the text as a whole.

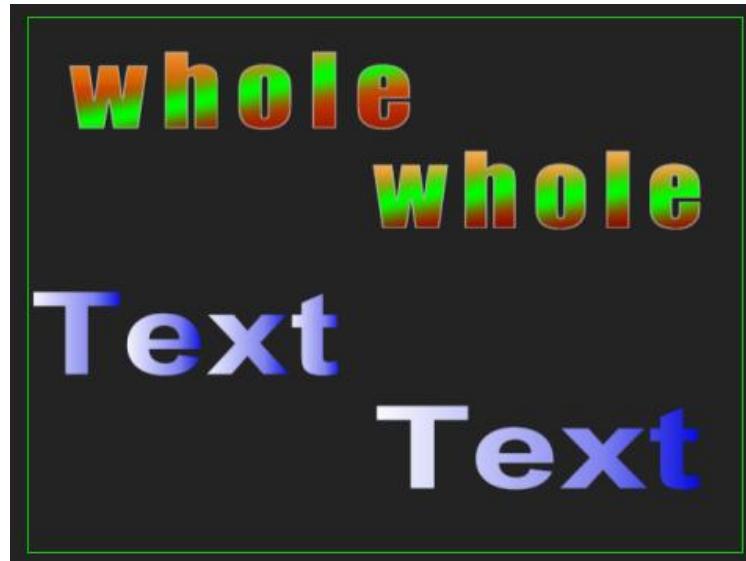

Individual Render: applies Shading effects letter by letter.

Set the Render format by clicking on the button in the Text Editing Bar.

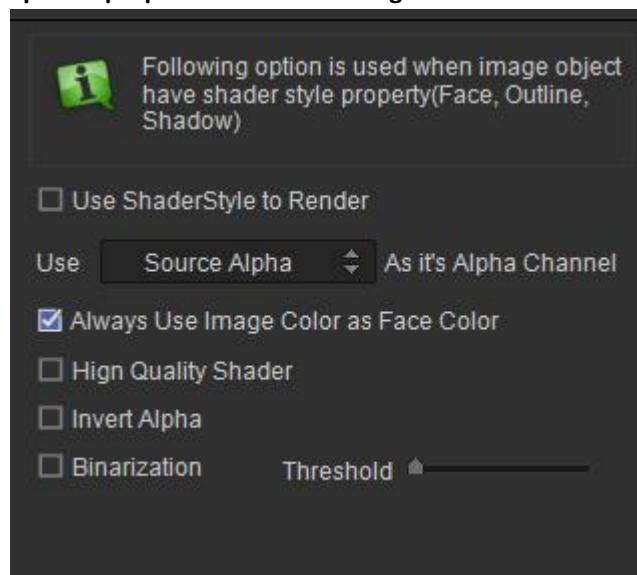

Example

### 3.11. Render Image

Specific properties of render image are shown below.

Note: the options are used when image object has shader style property (Face, Outline, Shadow).

Example:

Image--VTchannel085

image

Image--VTchannel085

adjust

Image--VTchannel085

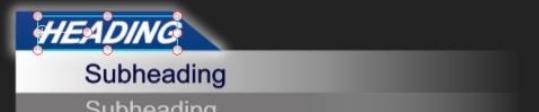

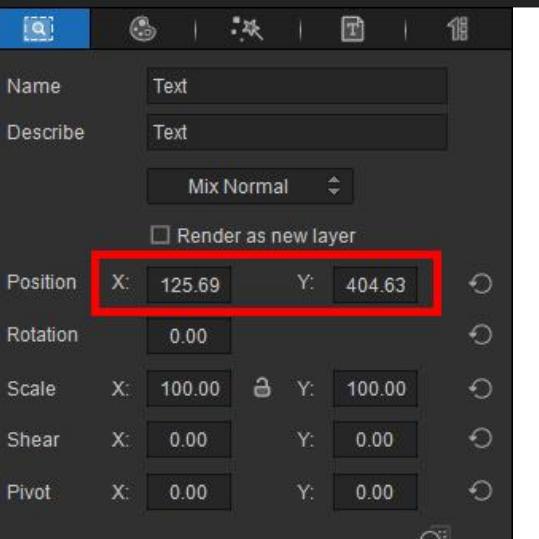

shading

# Chapter Four Graphics (Still) Editing Mode

## 4.1. Position, Scale, Rotate

### To move an object:

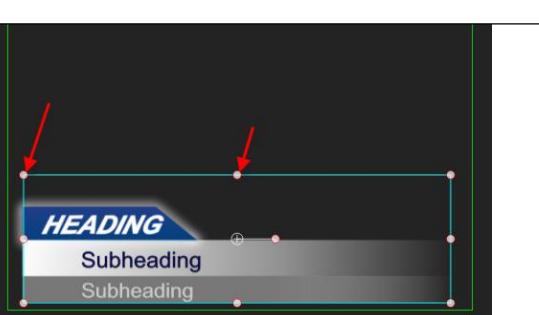

1. In the Edit Screen drag the object to the desired position.
2. Click on an object and use the arrow keys on the keyboard. Press Ctrl to increase speed.
3. Enter co-ordinates in the properties tab.

Step 1:Click on the object in the Edit Screen	
Step 2:Enter XY coordinates	

### Zoom Object:

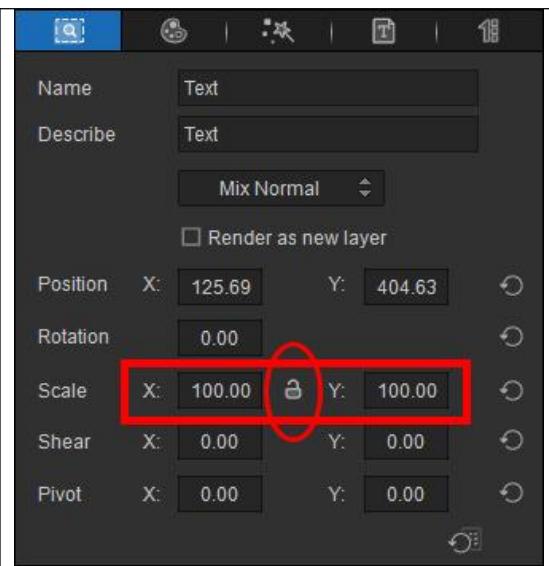

#### Method 1:

Drag the markers surrounding the object.  
Hold Shift to keep XY scale constant.

#### Method 2:

Enter XY scale in the Properties tab. Press on the lock to keep XY scale constant.

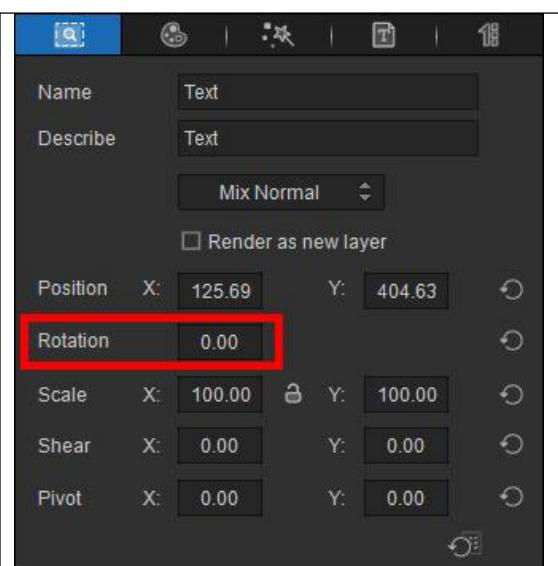

#### Rotate object:

Method 1: On the keyboard, hold Shift, then use the Up/Down arrow keys to rotate 45 degrees.  
Use Right/Left arrow keys to rotate 1 degree.

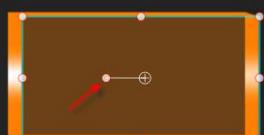

Method 2:

Enter numbers in the Properties tab Rotation field.

Method 3:

Move the cursor to the marker in the centre of the object

A circle will appear

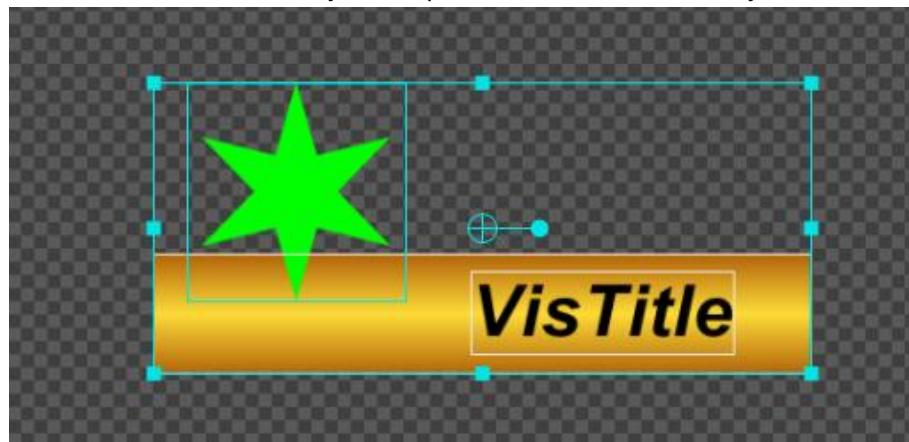

Drag the marker around the circle to perform rotation

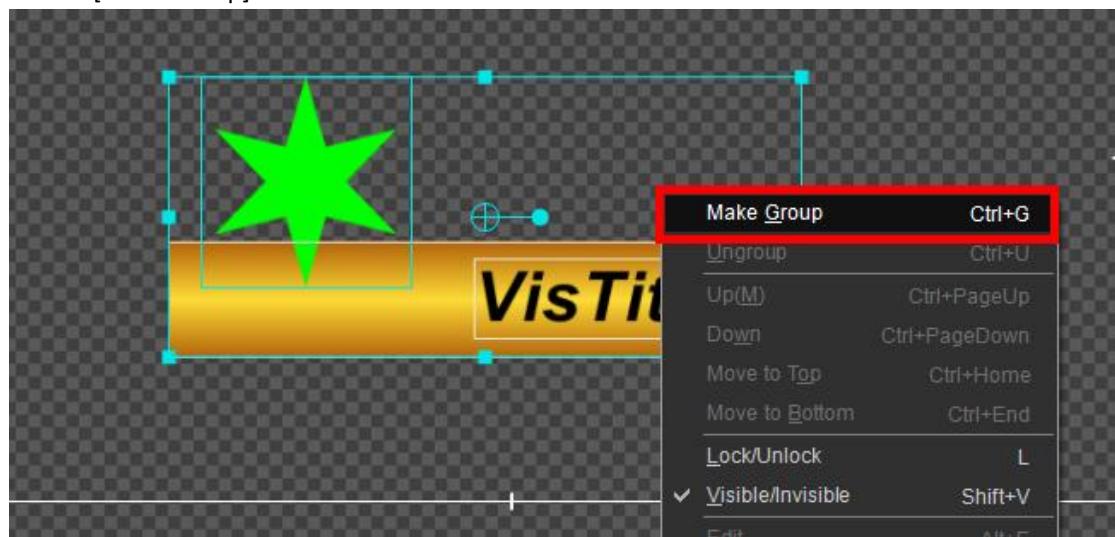

## 4.2. Make Group, Ungroup

Make Group will turn many objects into one. To make a group:

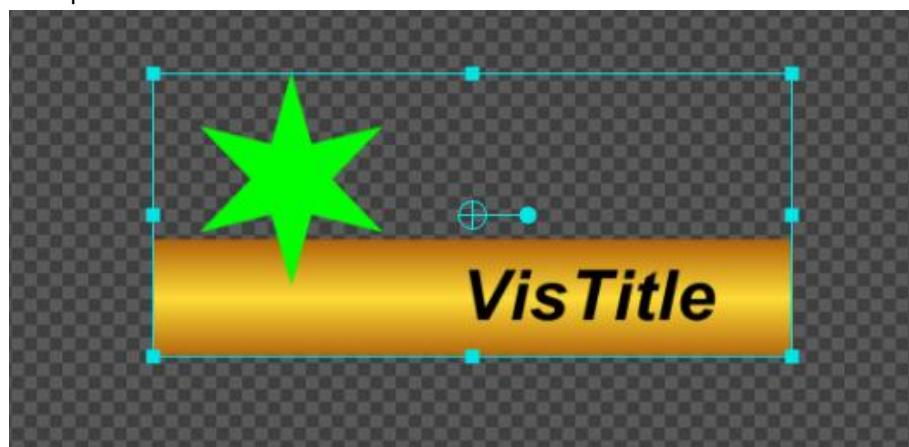

1. Hold Ctrl and choose objects, or press Ctrl+A to choose all objects in Edit Screen.

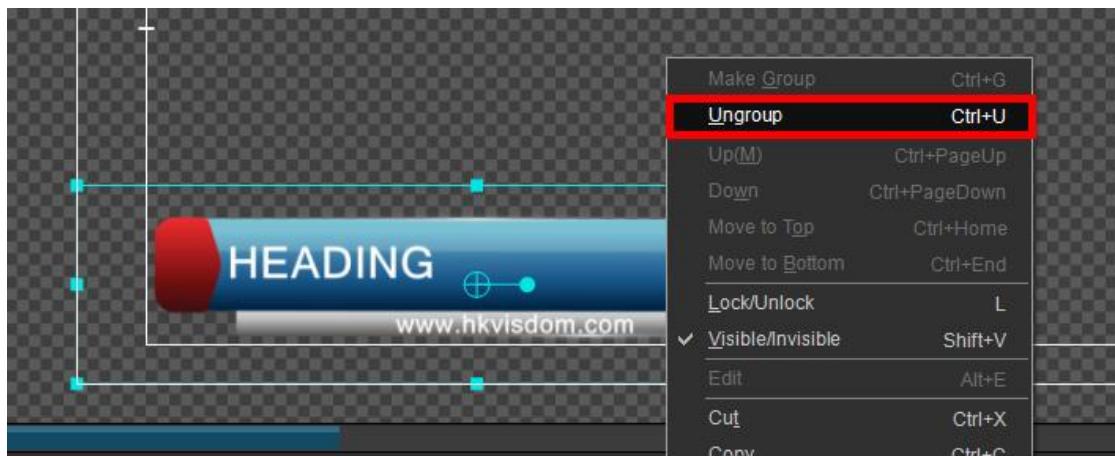

2. Press Ctrl+G or right-click and choose Make Group from the context menu. You can also press on [Make Group] in the Edit Menu Bar.

Example

To Ungroup press Ctrl+U, right-click and choose Ungroup, or press [Ungroup] in the Edit Menu Bar.

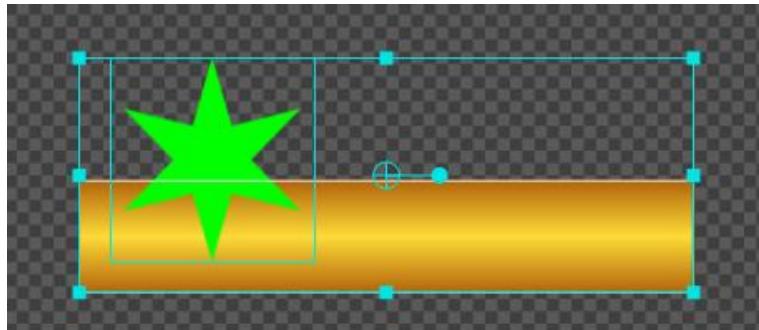

Example

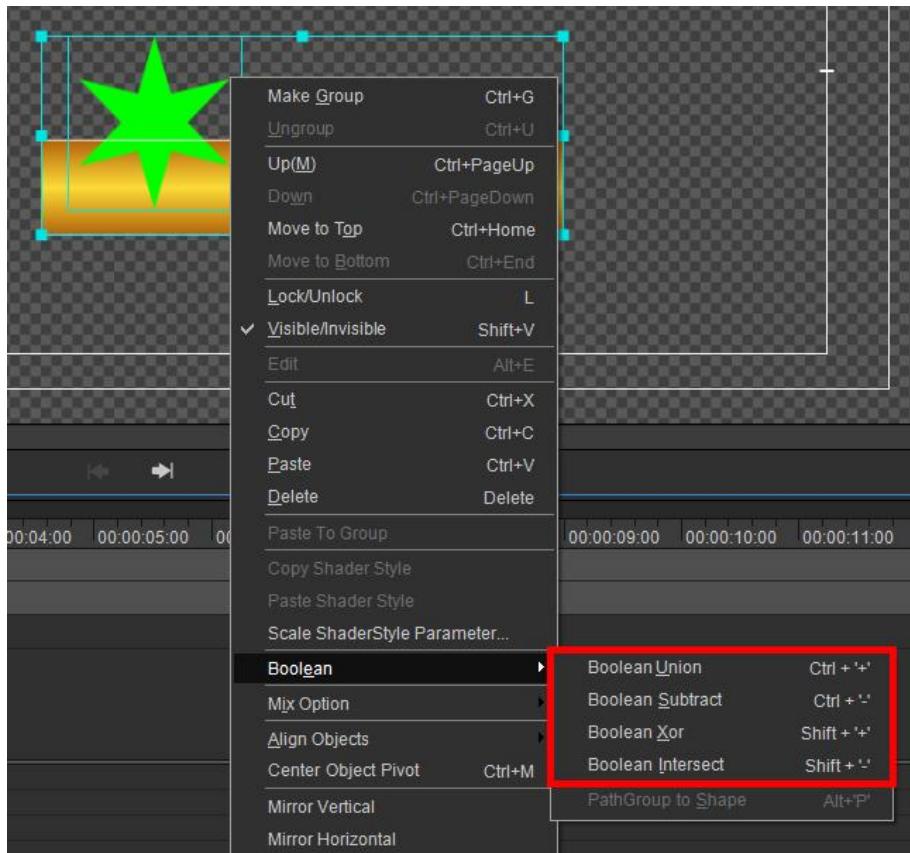

### 4.3. Boolean

Boolean is a special form of grouping and includes: Union, Subtract, Intersect and Xor.

To perform Boolean grouping, choose objects then:

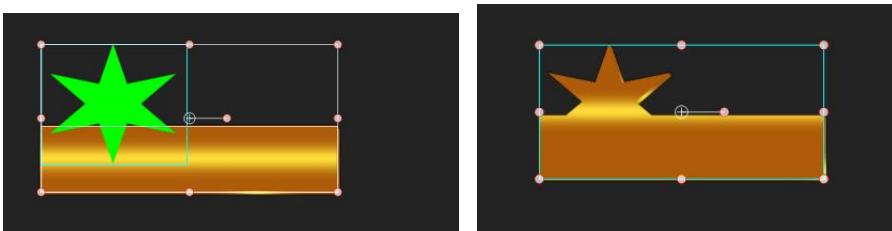

1. Use the keyboard shortcuts (Shift+'+', Shift+'-', Ctrl+'+' or Ctrl+'-')
2. Right-click and choose from the context menu.

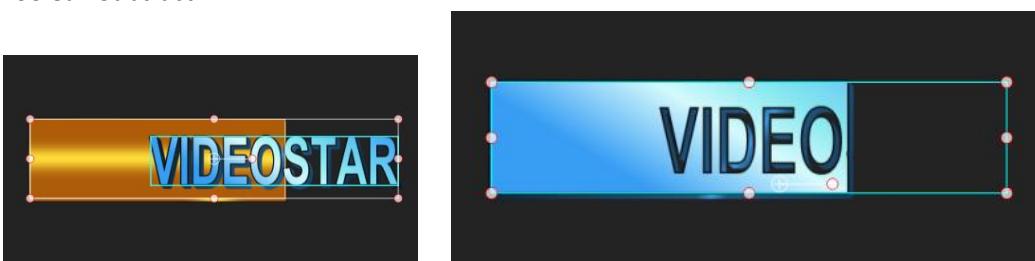

Example:

Boolean Union

Boolean Subtract

Boolean Intersect

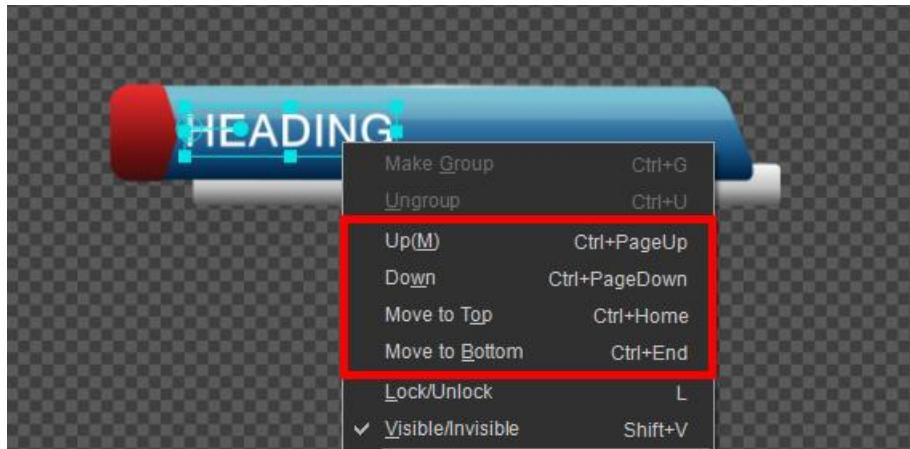

Boolean Xor

#### 4.4. Object level

When you have several objects in the Edit Screen, you can set level by:

1. Using the keyboard shortcuts: Ctrl+PageUp, Ctrl+PageDown, Ctrl+Home, Ctrl+End
2. Right-click and choose from the context menu.

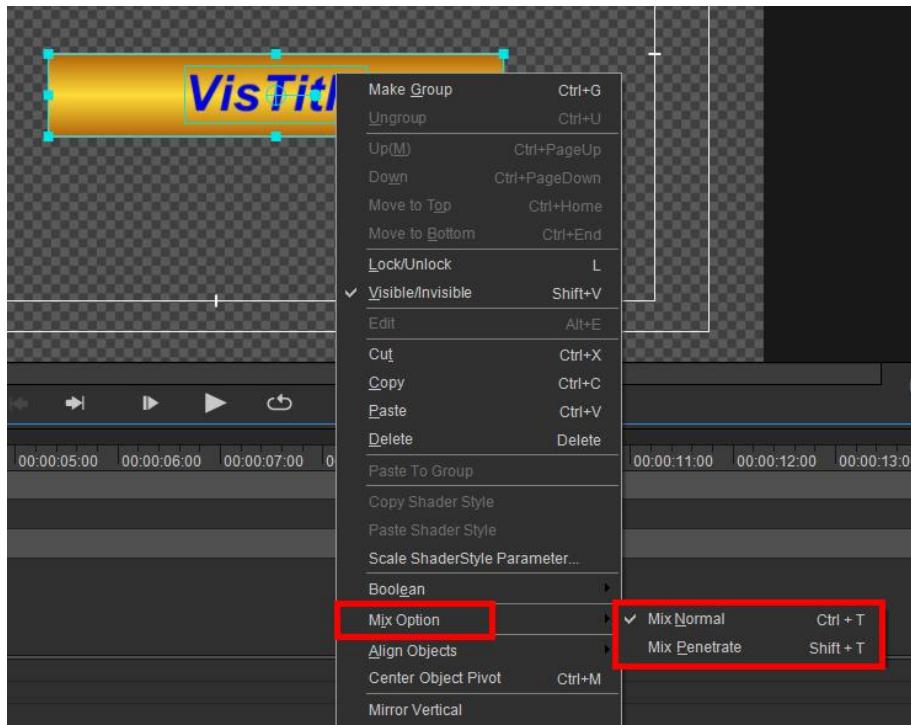

#### 4.5. Mix Option

There are two Mix options: Mix Normal and Mix Penetrate. Two ways to apply:

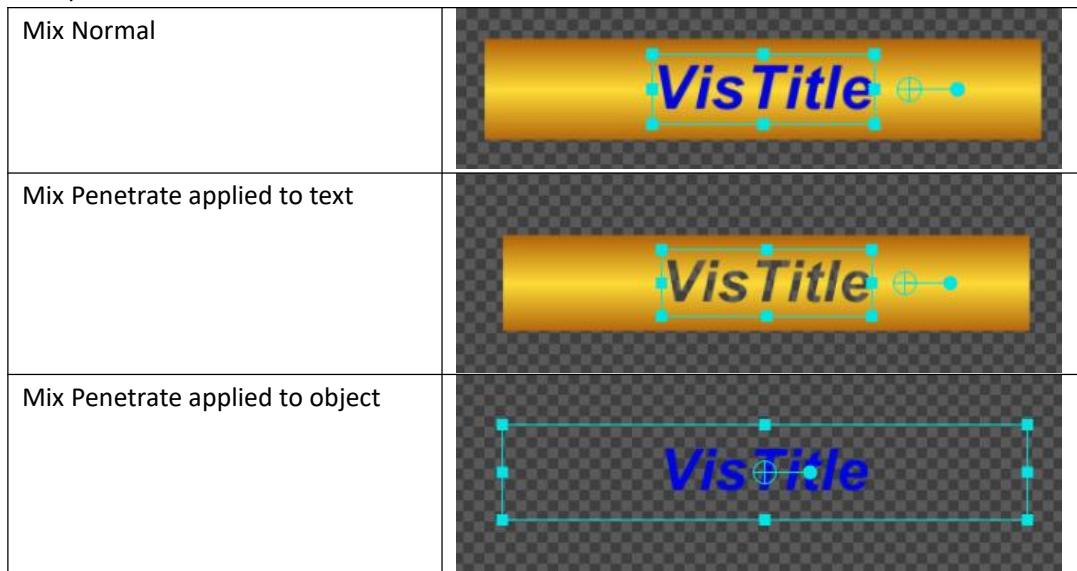

1. Use keyboard shortcuts Ctrl+T, Shift+T

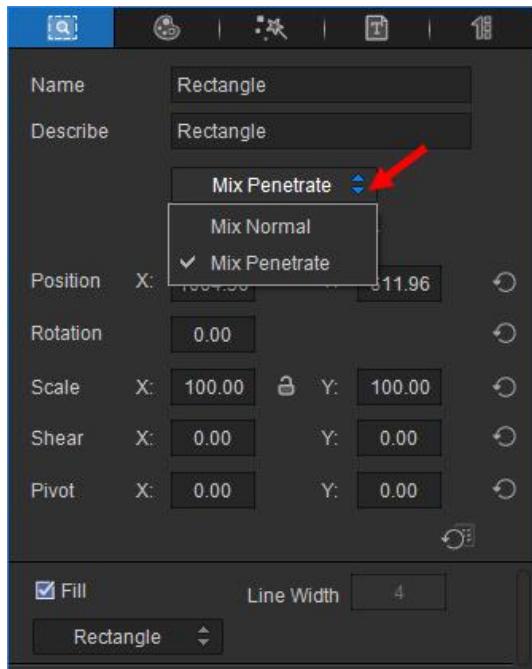

2. Right-click then choose from the context menu

Example

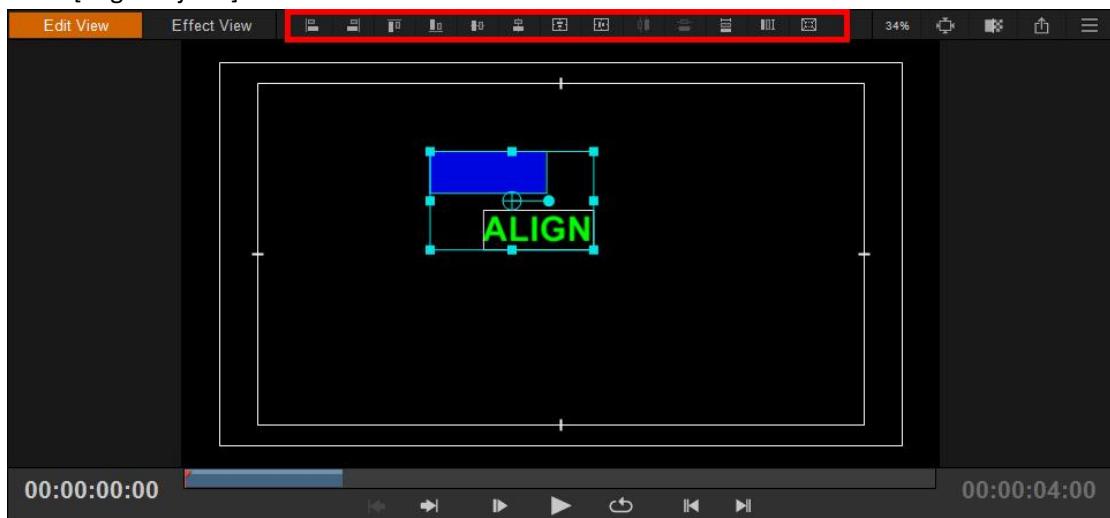

3. Choose from the Properties Tab

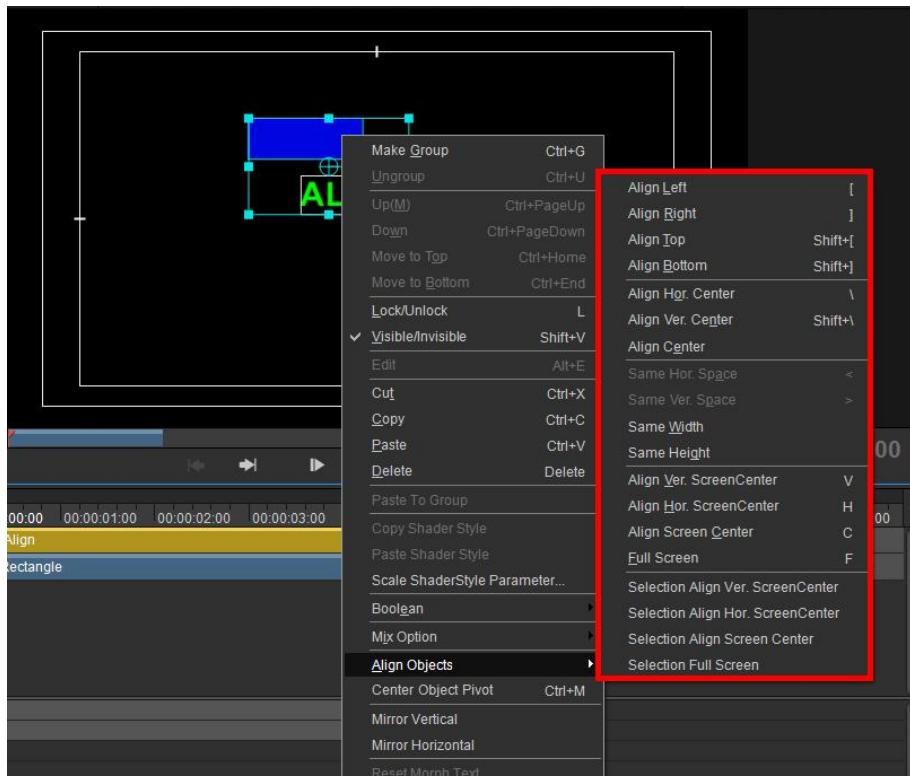

## 4.6. Align

To align objects you can:

Press [Align Objects] in the Edit Menu Bar

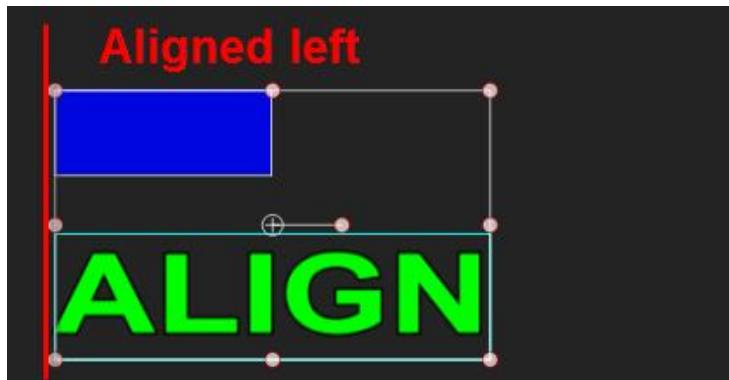

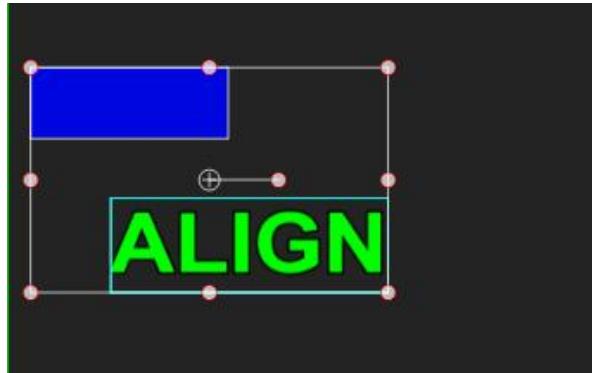

1. Right-click and choose Align Objects from the context menu

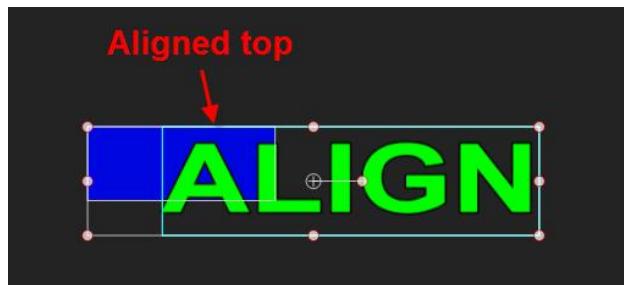

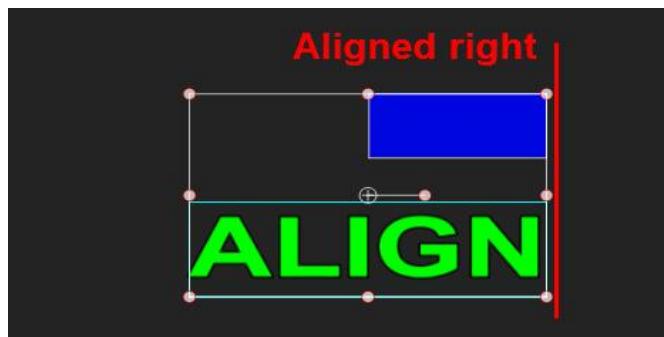

Example

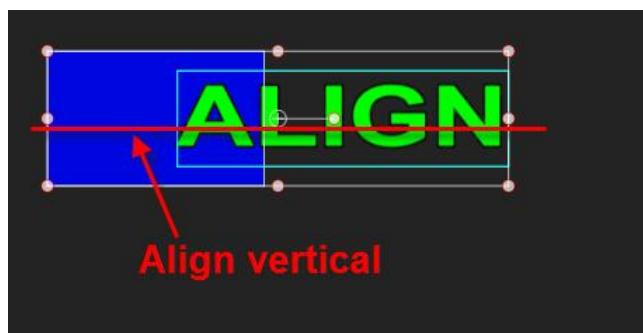

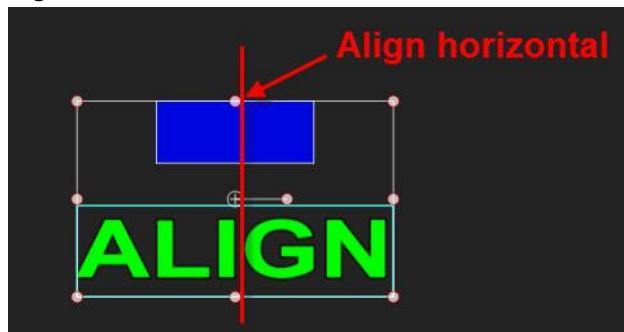

Choose Objects:

Align Right, Top, Bottom all use the same steps.

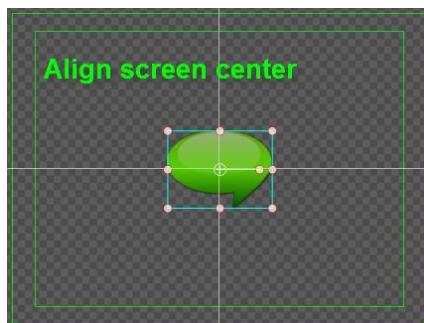

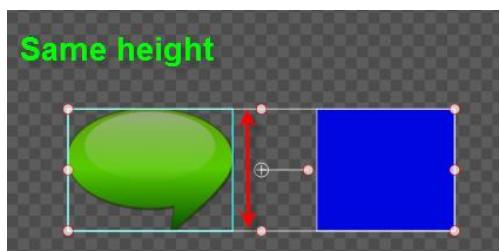

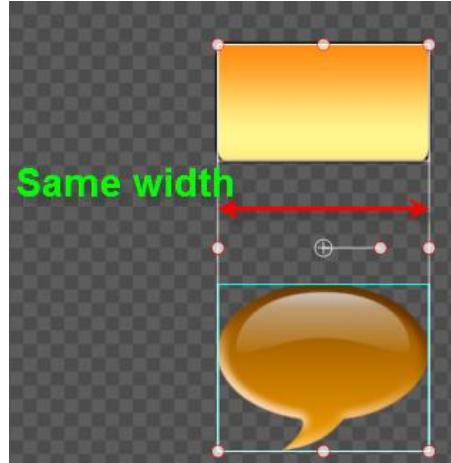

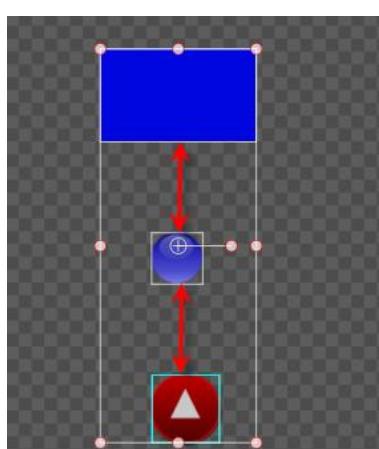

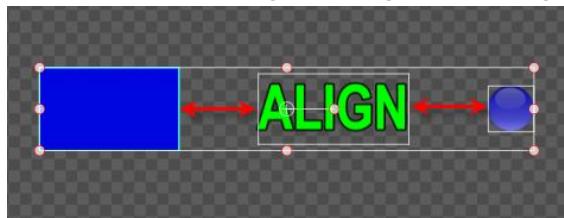

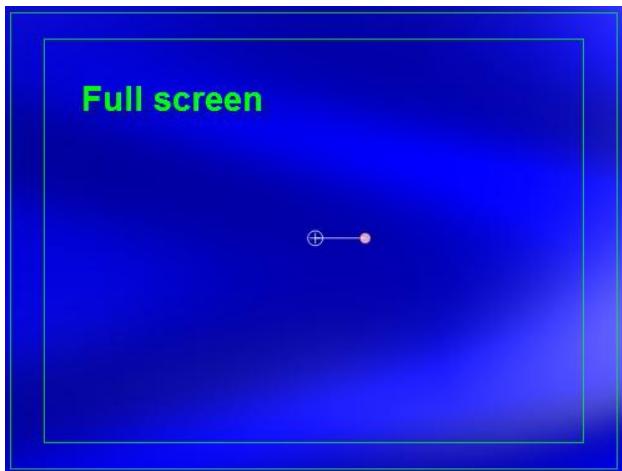

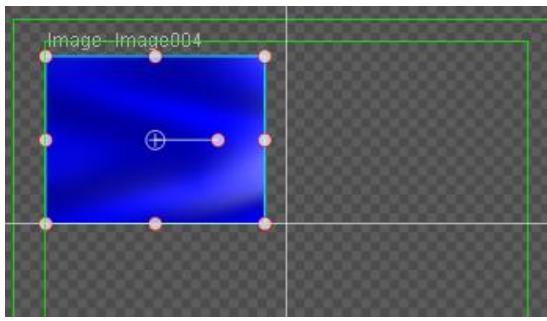

Align Horizontal, Vertical and Centre

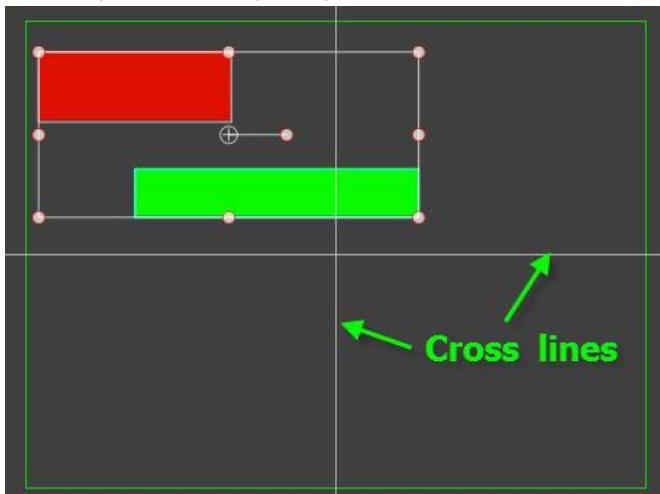

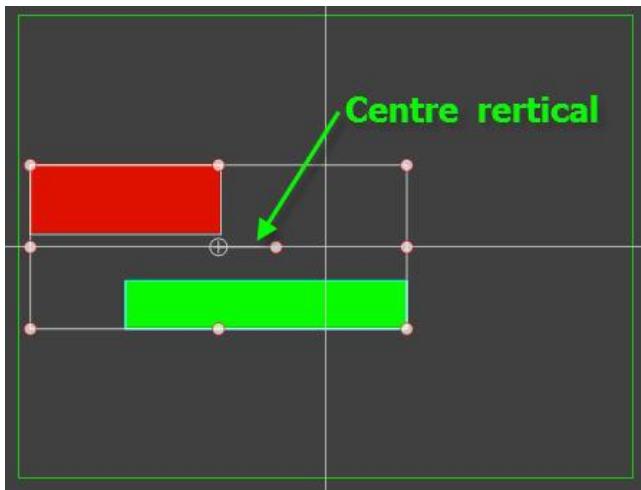

When you have more than three objects, you can align range using the [Align Space] button in the Edit Menu Bar or right-clicking and choosing from the context menu.

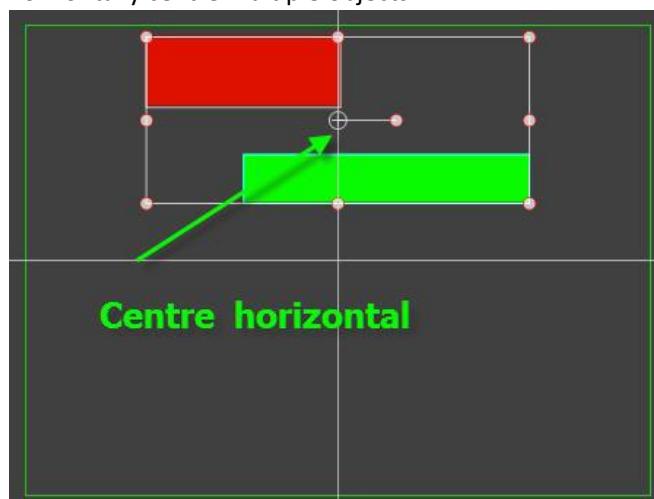

Vertically centre multiple objects

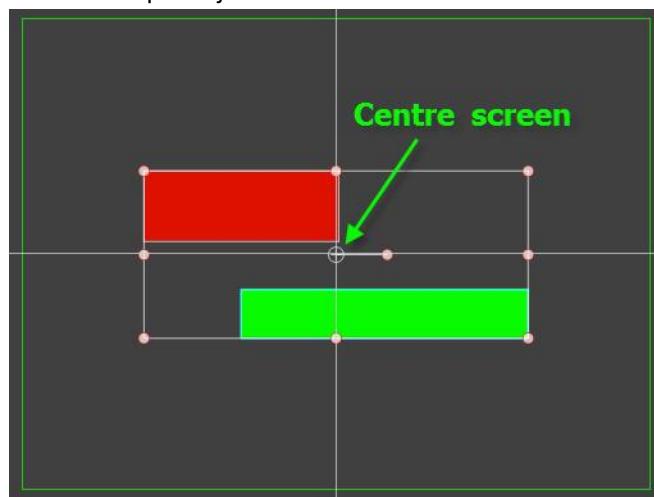

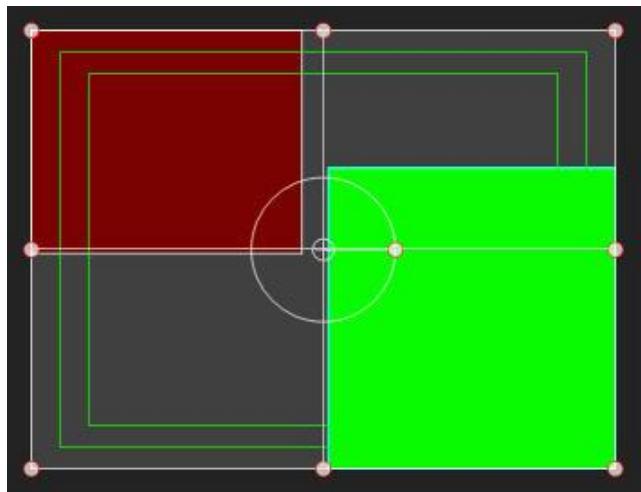

Horizontally centre multiple objects

Centre multiple objects

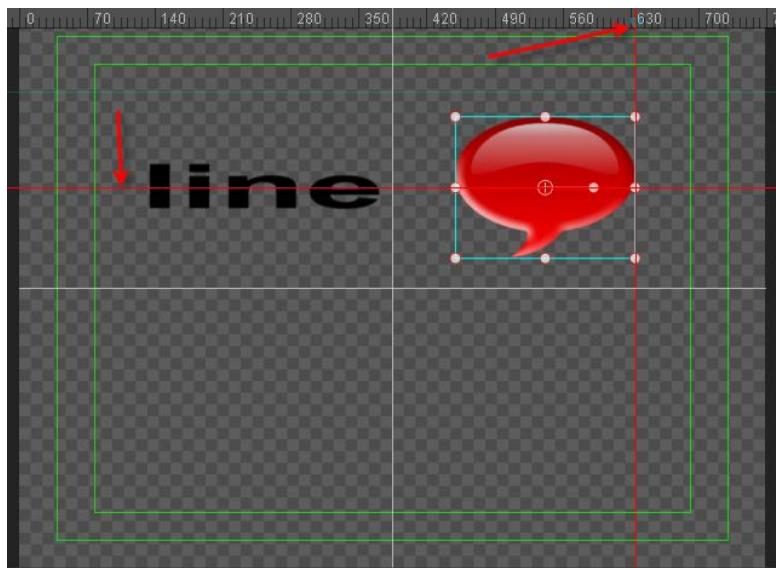

Multiple objects full-screen

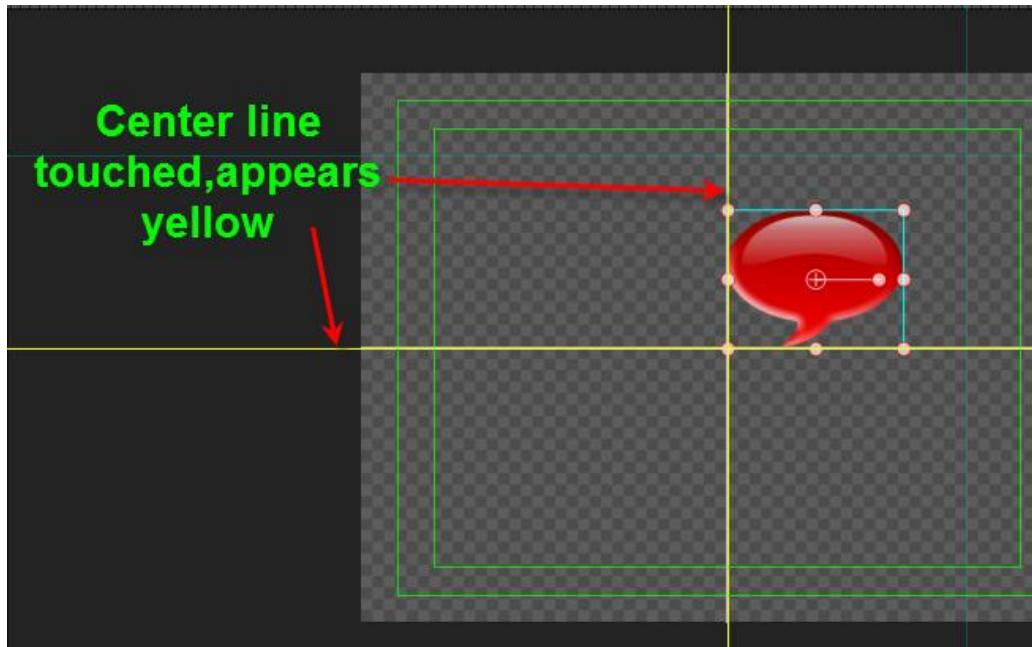

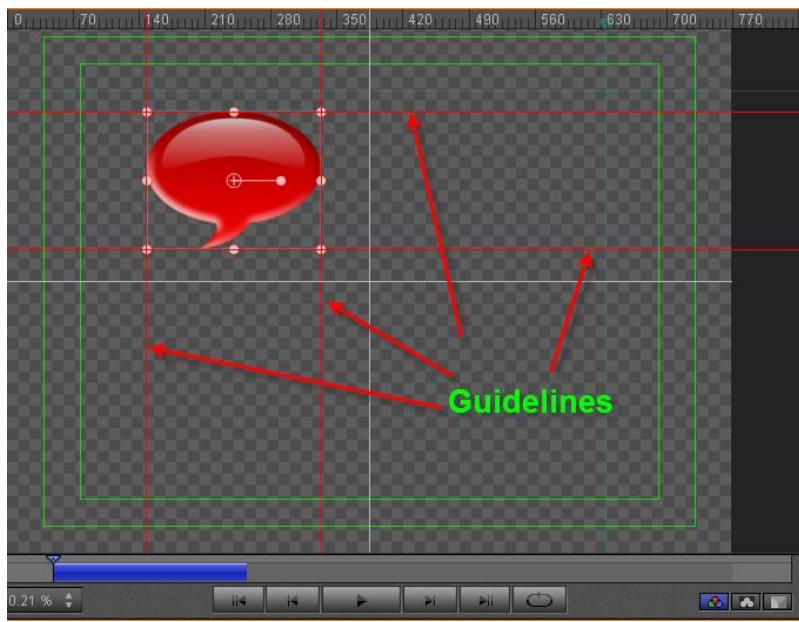

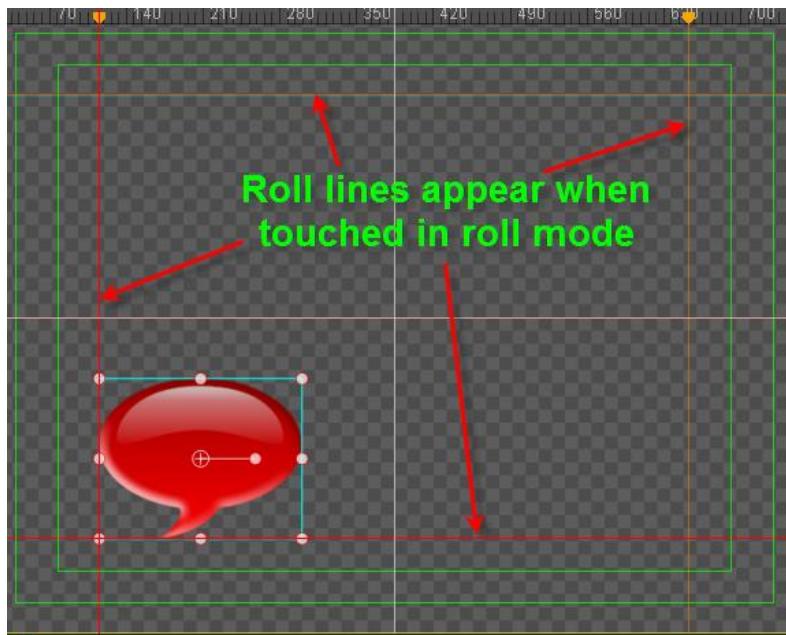

## 4.7. Smart Borders

Smart Borders help you align objects. The border lines will illuminate whenever an object touches them.

1. Create an object
2. Drag the object to one of the Smart Borders
3. Border line is activated

Smart Borders along the edges will turn red, whilst the centre lines will turn yellow.

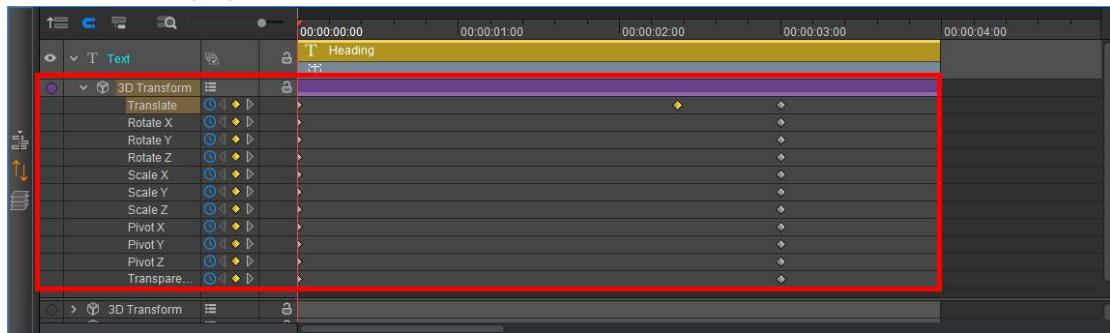

In Roll/Crawl settings lines will appear red.

# Chapter Five Applying effects

Object effects have two sources: those preset in 3D Transform, and those that have been added from effect files.

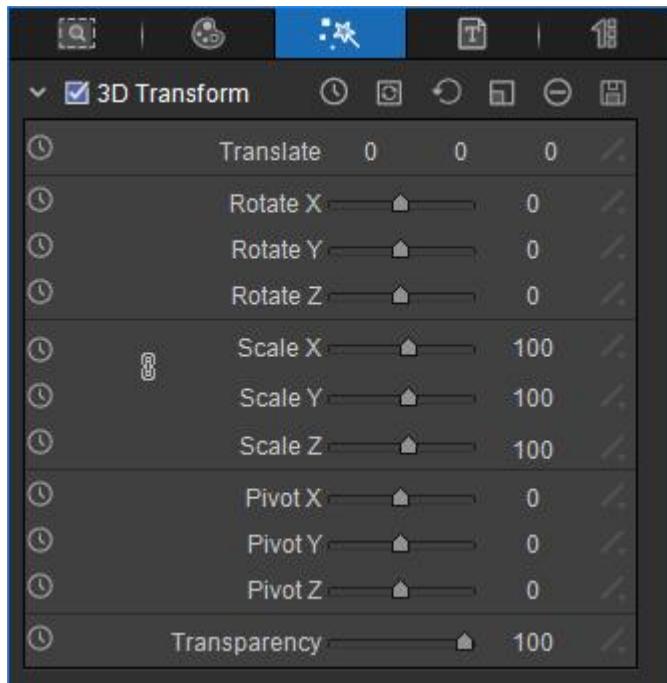

## 5.1. 3D Transform

- 1) The effect's play time and Timeline track duration are always equal.
- 2) An object's 3D Transform effects include Displacement, Scale, Rotate and Transparency.
- 3) Timeline display

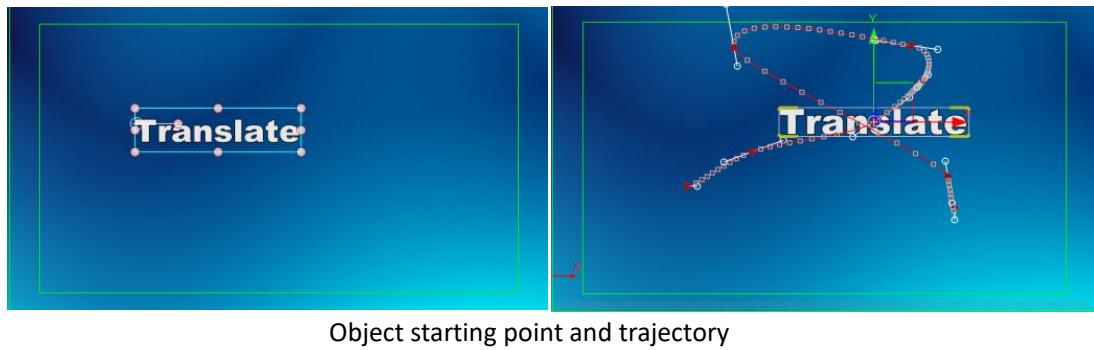

In the picture above we can see Displacement Keyframes

- 4) Parameters in the Effects Tab:

### 5.1.1. Displacement

Displacement refers to the position of an object at a specific time in space. Where the object moves depends on the set route and starting position. Example:

Object starting point and trajectory

### 5.1.2. Scale

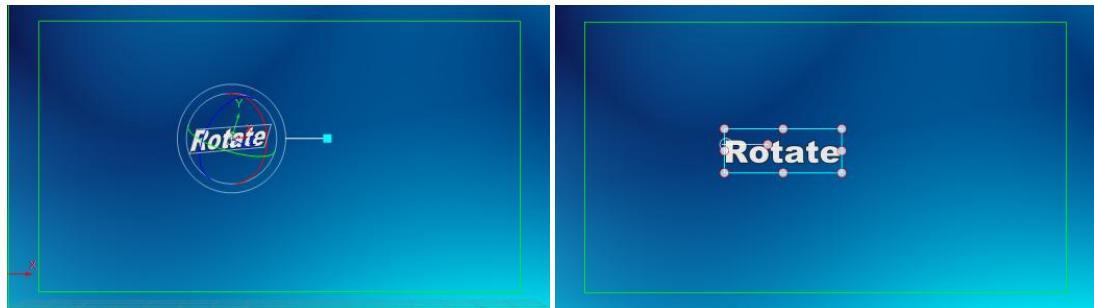

Scale refers to the size of the object at a specific time in space.

Example:

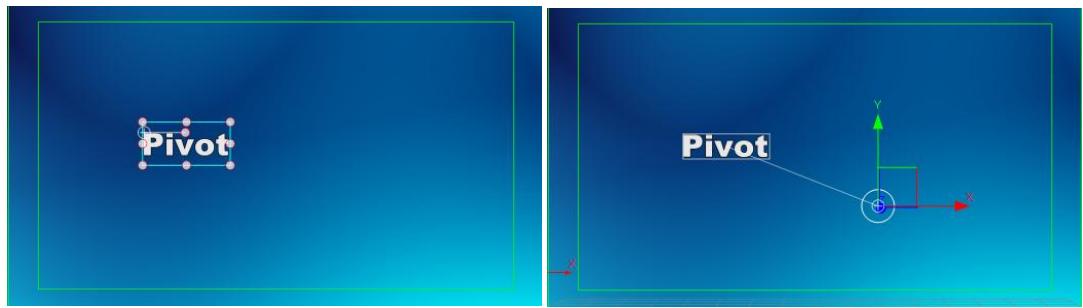

### 5.1.3. Rotate

Rotate refers to an object's rotation movements at a specific time in space. The object centre is the centre of rotation. Example:

### 5.1.4. Pivot

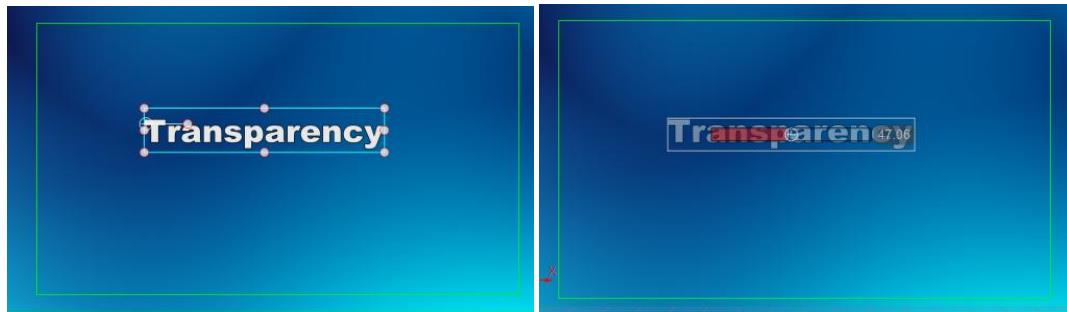

Pivot refers to the size of the object pivot at a specific time in space.

## 5.1.5. Transparency

Transparency refers to how transparent or opaque an object is at a certain point in time.

Example:

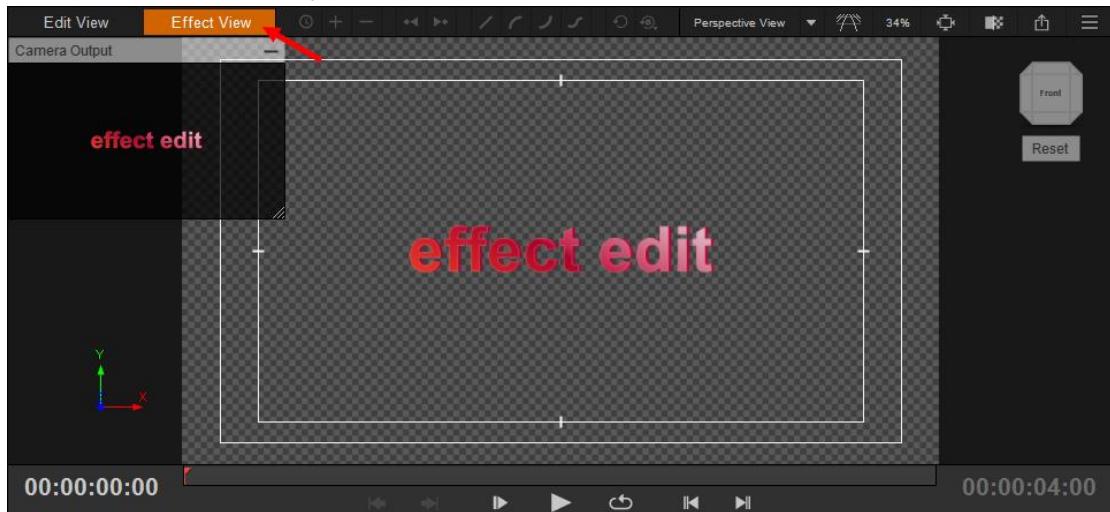

Transparency at 100% and 47%

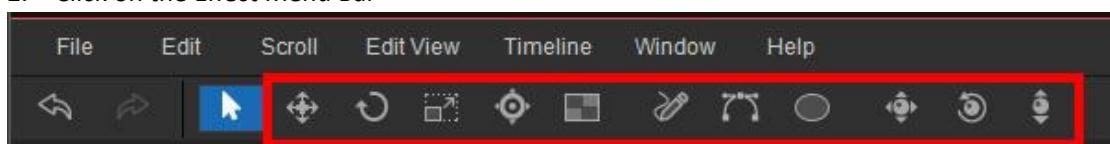

## 5.2. Applying 3D Transform

To apply 3D Transform:

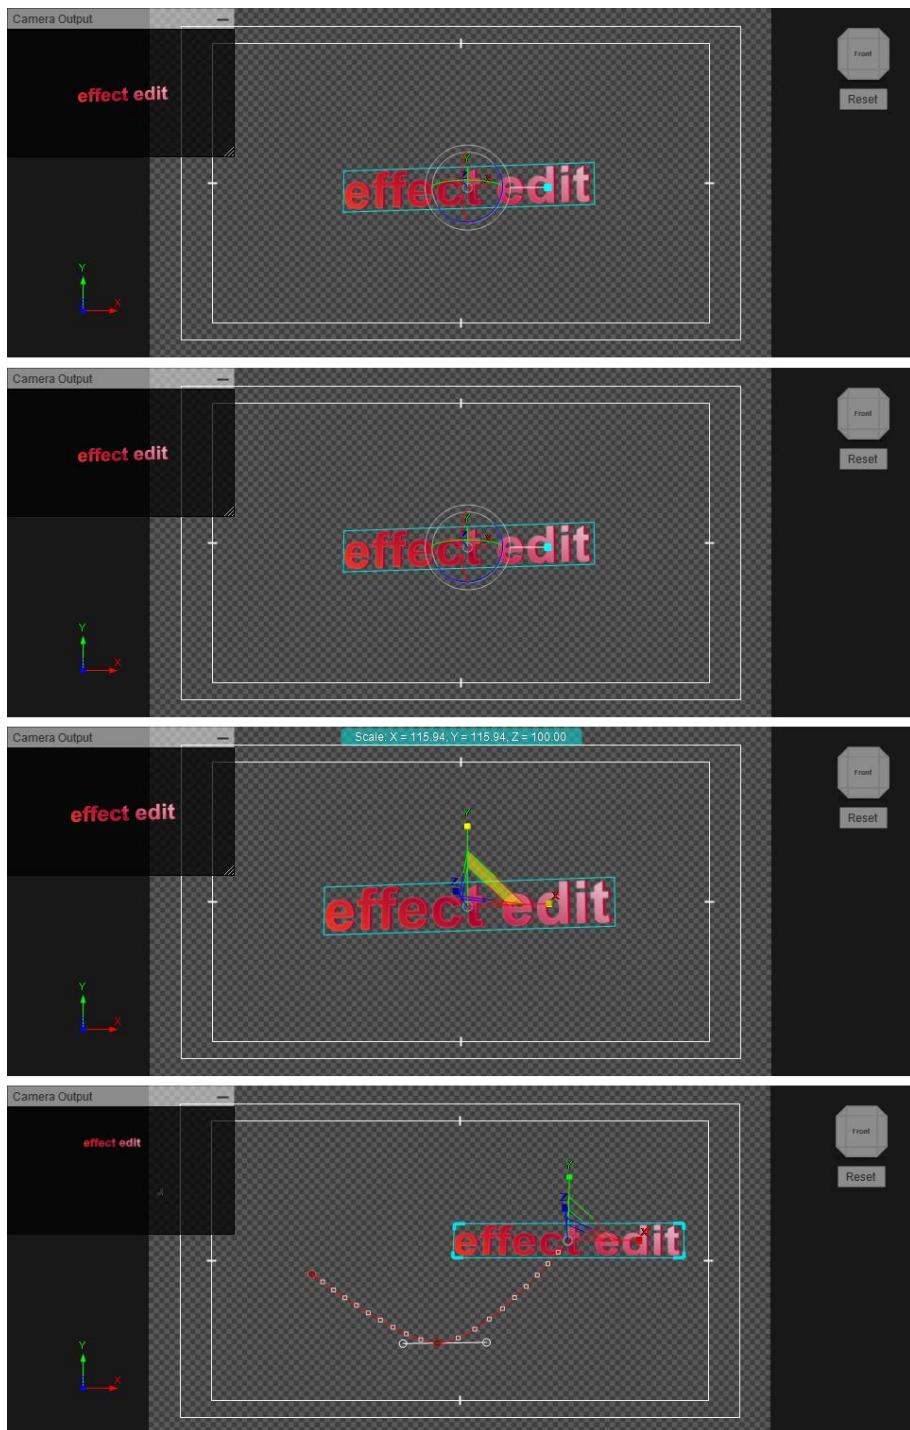

1. Click "Effect View" to open Effect Edit Mode

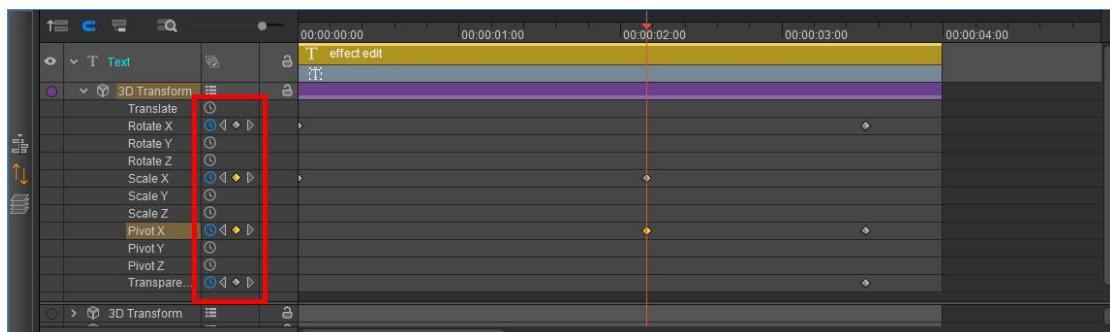

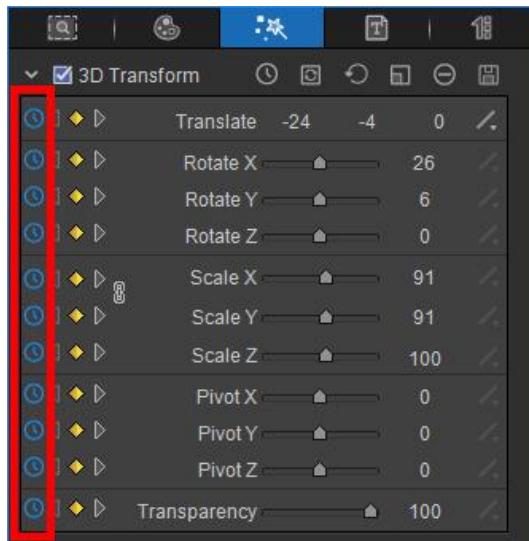

2. Click on the Effect Menu Bar

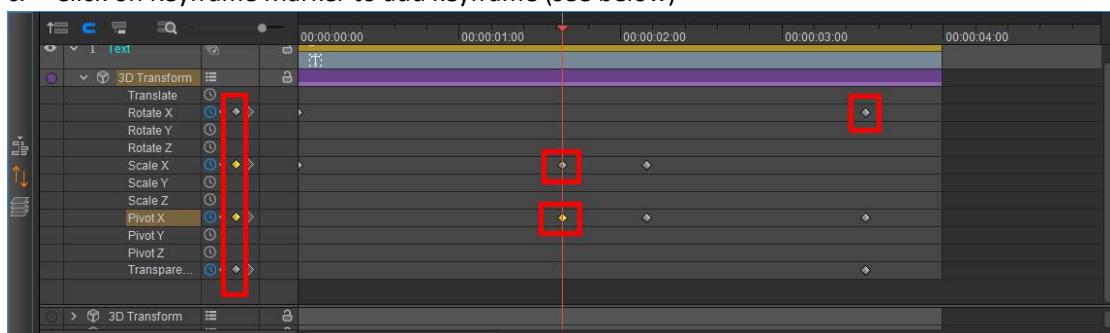

3. To apply parameters use the Edit Screen or the Effect Tab.

4. If Keyframe animation is needed:
  - a. Activate Keyframe animation parameters as shown below

- b. Move the Timeline Marker to the desired location
- c. Click on Keyframe Marker to add keyframe (see below)

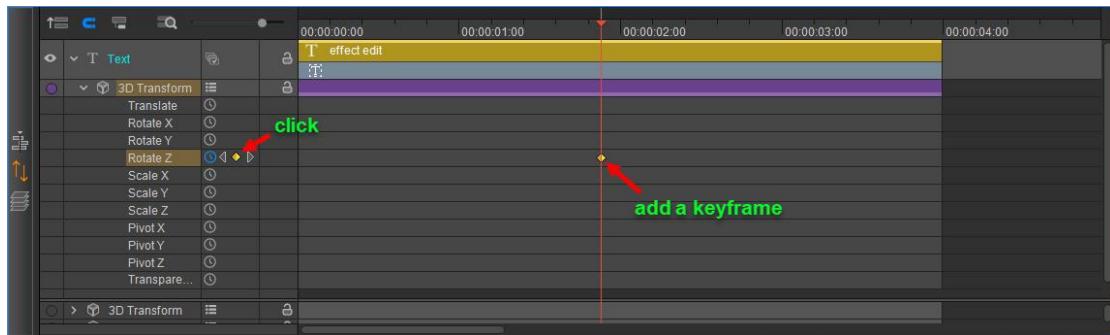

- d. Use the Effect Tab or the Edit Screen to adjust parameters

### 5.3. Keyframing

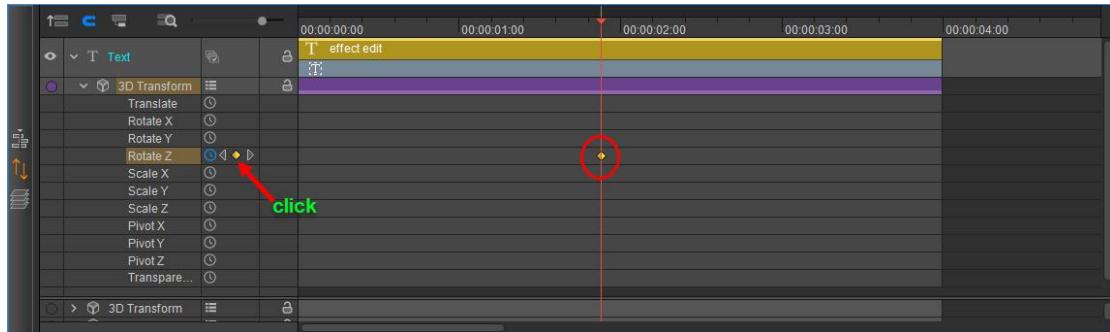

- **Add keyframe**

After moving the timeline click on the add keyframe button.

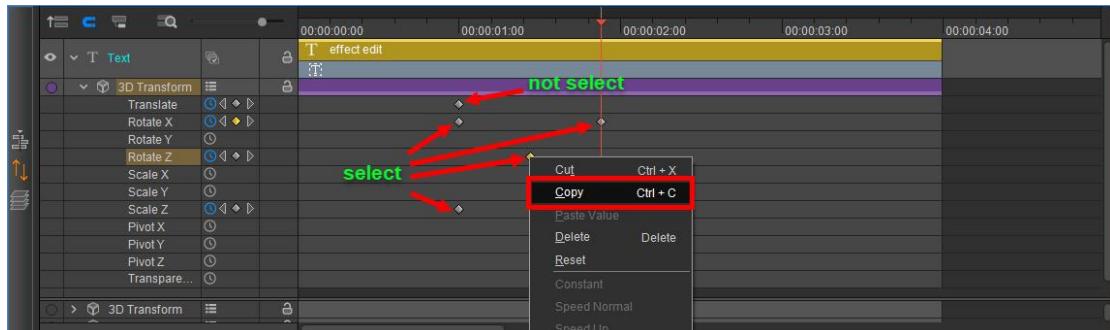

### ● Delete keyframe

Move the timeline onto the keyframe, click on the delete keyframe button.

### ● Copy keyframe

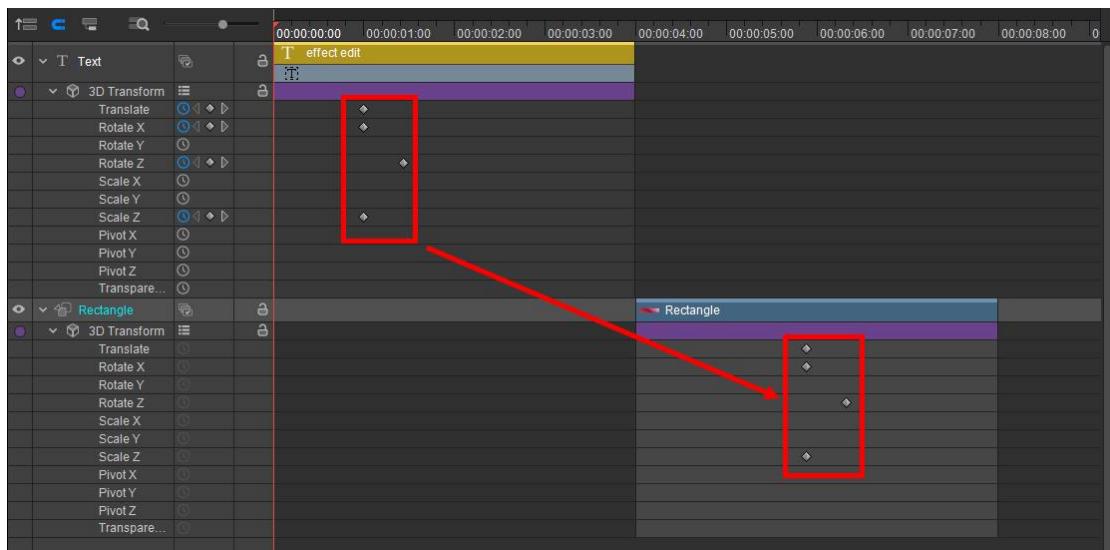

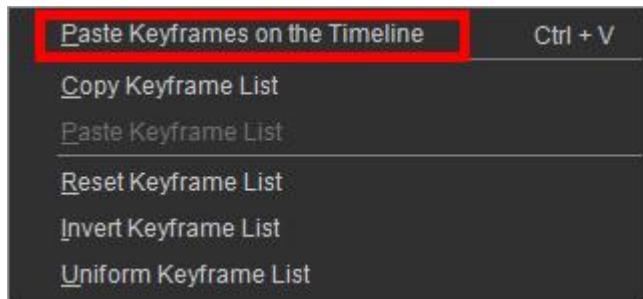

Right-click and choose "Copy" on selected keyframe(s). You can also use the shortcut Ctrl+C to copy.

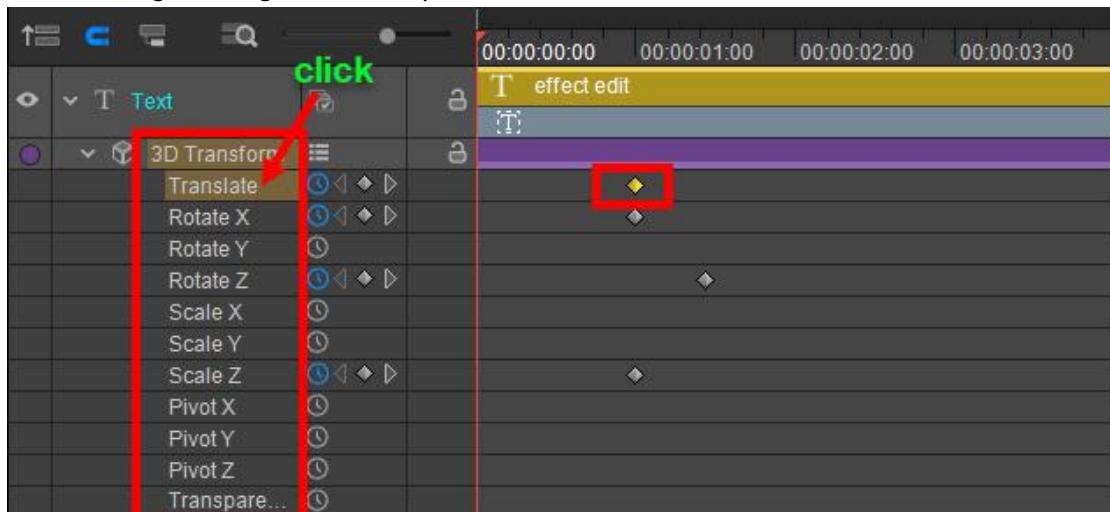

Right-click context men

Cut Ctrl + X	Cut
Copy Ctrl + C	Copy
Paste Value	Paste Value
Delete Delete	Delete
Reset	Reset
Constant	Constant
Speed Normal	Speed Normal
Speed Up	Speed Up
Speed Down	Speed Down
Ease in out	Ease in out
Custom...	Custom

Copying keframes to other clips: right-click on the 3D Transform track of another clip to see the context menuPerform paste

When clicking on a single track all keyframes on that track will be selected, as shown below:

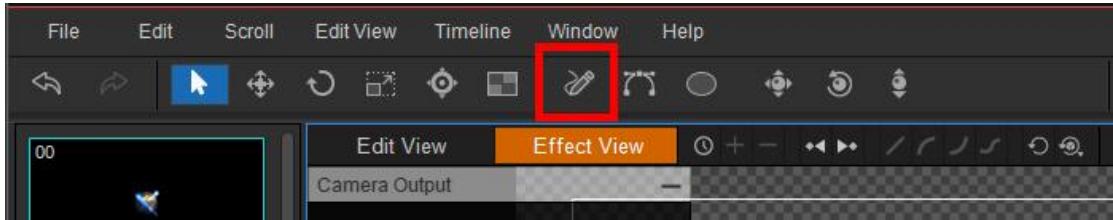

Right-clicking on the rectangle shown above gives the following context menu: (This operation only affects the current track)

<p><u>Copy Keyframe List</u></p> <p><u>Paste Keyframe List</u></p> <hr/> <p><u>Reset Keyframe List</u></p> <p><u>Invert Keyframe List</u></p> <p><u>Uniform Keyframe List</u></p>	<p>Copy keyframe linked list</p> <p>Paste keyframe linked list</p> <p>Reset keyframe lined list</p> <p>Invert keyframe linked list</p> <p>Keyframe interval list</p>
---	--

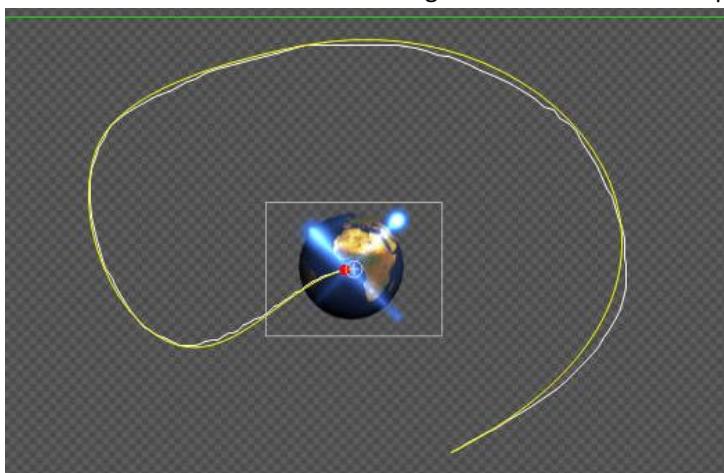

## 5.4. Create Freehand Path

Use feehand path create a Bezier motion path for object to move on. Adjusting the parameters of the Bezier curve any time to change motion track of the object.

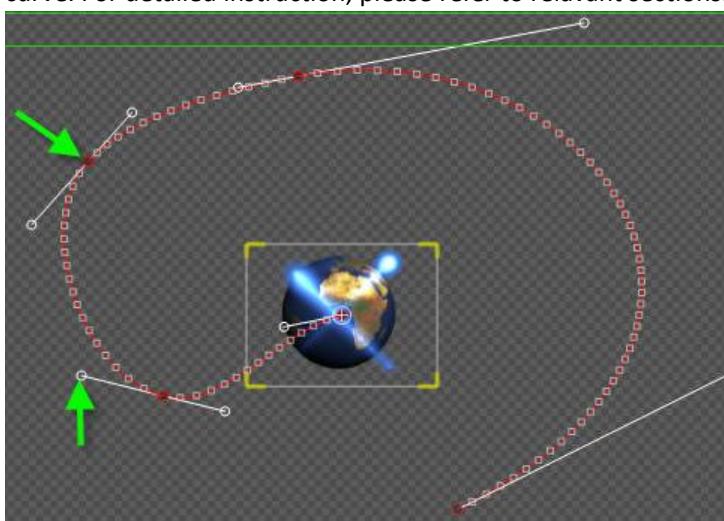

- 1) Create object in the editing area, press shortcut key F10 to switch to effect editing mode.  
Click to select the object in editing area, and then click Create Freehand Path button .

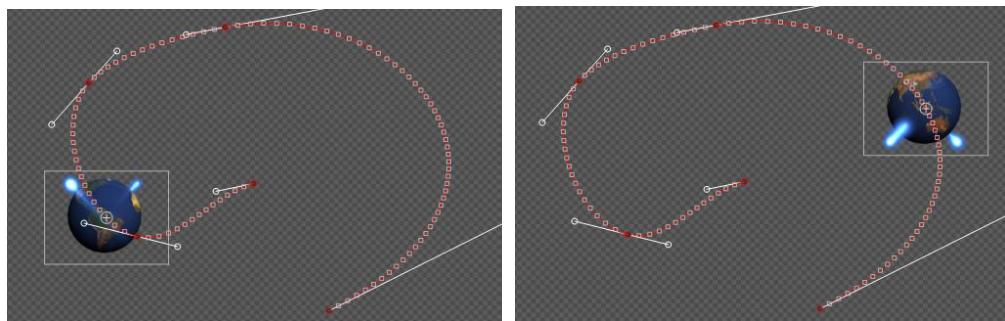

Press and hold the left mouse button to draw a path in the editing area. After drawing a path, release the mouse button and click right mouse button to escape.

As shown in the following picture, the motion path can be adjusted just the same way as Bezier curve. For detailed instruction, please refer to relavant sections.

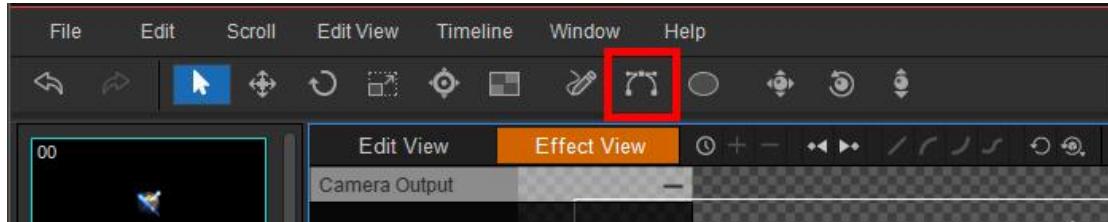

- 2) After adjusting the path, move the timeline to preview, as shown below.

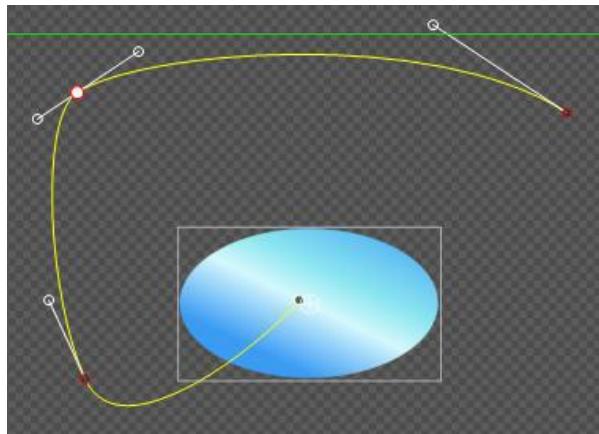

## 5.5. Create Bezier Path

Create motion path for object with fast Bezier tool. After it's done, object will move following the path. Bezier path can be adjusted freely, thereby changing the motion path quickly.

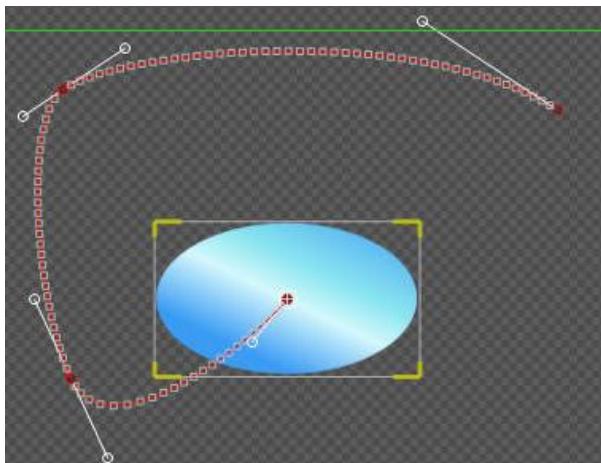

- 1) Create object in the editing area, press shortcut key F10 to switch to effect editing mode. Click to select the object in editing area, and then click on Create Bezier Path button .

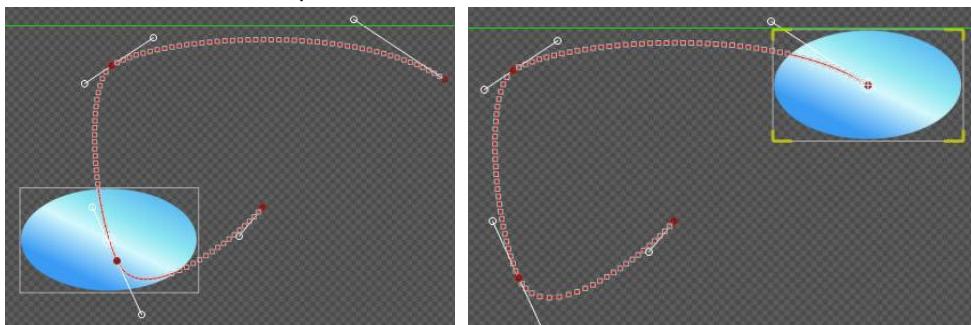

- 2) Click left mouse key in the editing area, create a Bezier curve node, then move the cursor and click a few more times to create a Bezier curve. Drag your mouse horizontally and vertically allows creating Bezier curve with different radian and angels.

Right click to finish creating Bezier curve, as shown below.

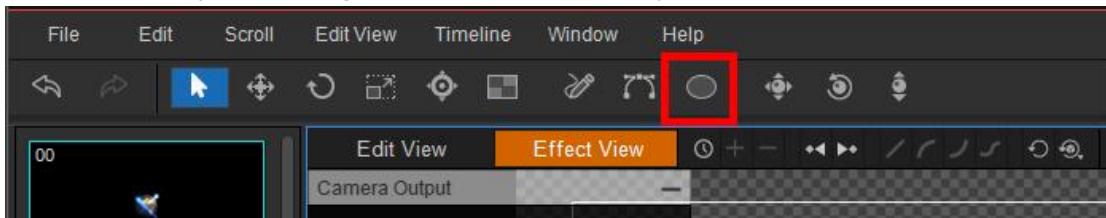

- 3) Drag the nodes to change the position of the curve. And adjust curve radian with the handle at the nodes. For detailed information about Bezier curve, please refer to relevant chapters. Move the timeline to preview the animation.

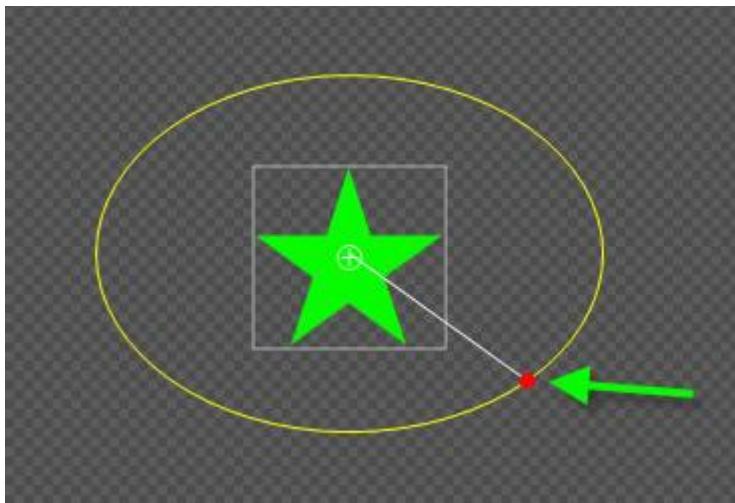

## 5.6. Create Ellipse Path

Create oval motion path for object with Ellipse tool. After it's done, object will move following the ellipse path. Ellipse Bezier path can be adjusted freely, thereby changing the motion path quickly.

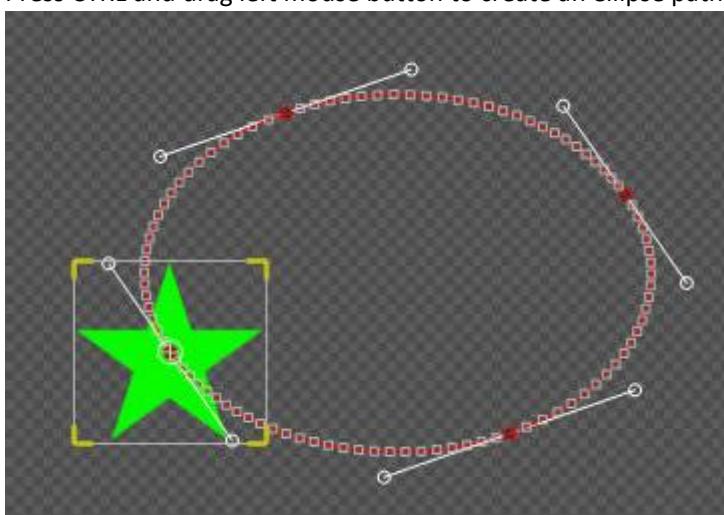

- 1) Create object in editing area, press shortcut key F10 to switch to effect editing mode. Click to select the object in editing area, and then click on Ellipse button.

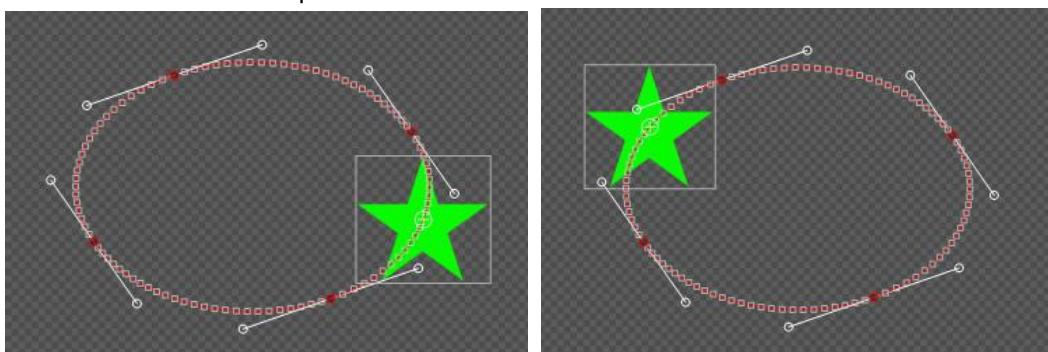

- 2) Press left mouse button in the editing area and drag. Release the mouse, and the point will appear as shown below when you move the mouse. Move the cursor to right position, and then right click to create an oval path. The movement starting point is shown in the following picture.

Press CTRL and drag left mouse button to create an ellipse path.

- 3) Drag the nodes to change the position of the curve. And adjust curve radian with the handle at the nodes. For detailed information about Bezier curve, please refer to relevant chapters. Move the timeline to preview the animation.

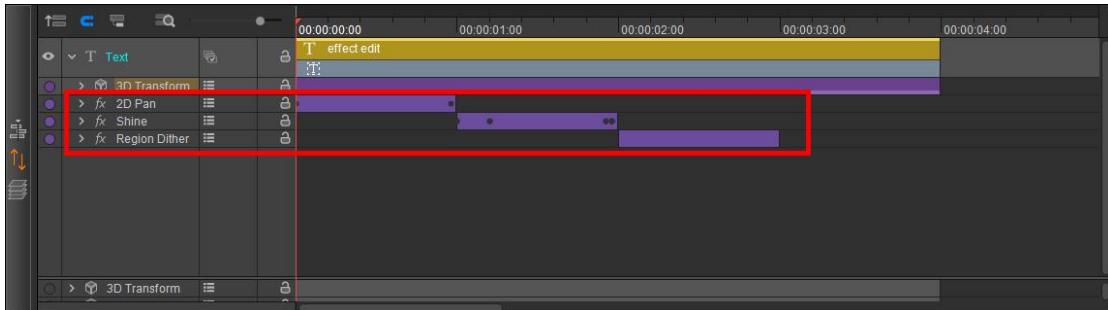

## 5.7. Effect composition

There are many template effects that can be added to an object preset effects, including: 2D Pan, 2D Stretch, Linear Dither, Region Dither, Shine, Star Glow, Lens Flare, Stripe, Sparkle, Linear Light, Radical Light, Image Light, Lens, Wormhole, Swirl, Ripple, Circle Lens, Page Curl, Page Turn, Gaus Blur, Radical Blur, Motion Blur, Box Blur, Spin Blur, Wipe, Mosaic, Flick.

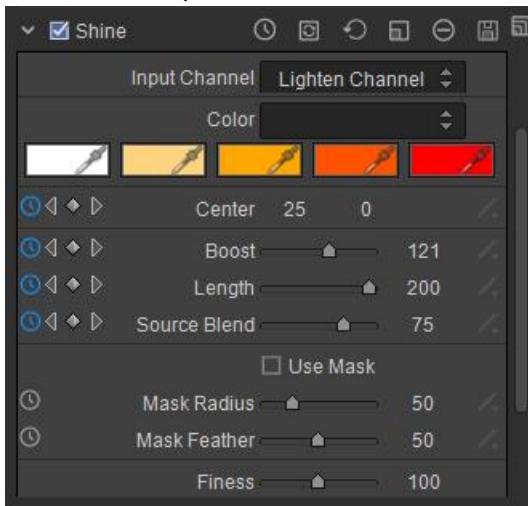

1) The duration of added effects can be freely modified

2) All keyframe effect parameters can be edited

Track example

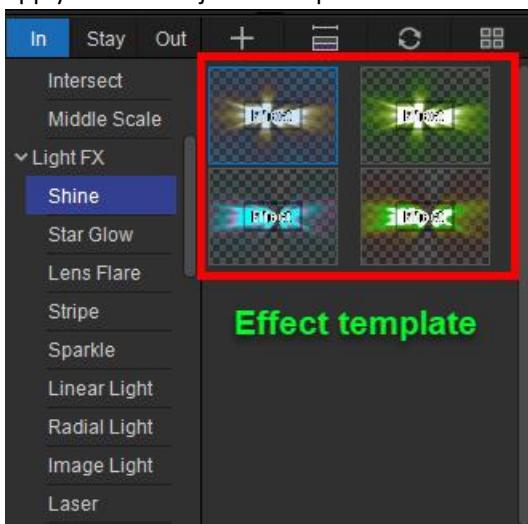

Effect Tab example

## 5.8. Effect Templates Library

The software supplies many preset templates for every effect. Double-click on a template to apply it to the object. Example:

Before applying the template you can set other parameters such as duration and appearance.

[In] Button - set when an effect should appear

[Stay] Button - set how long an effect should appear

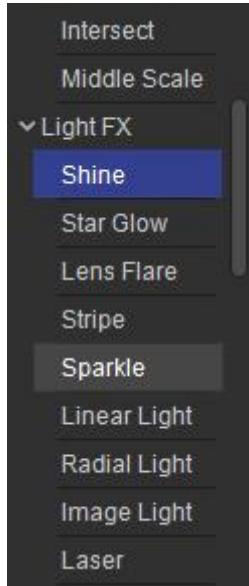

[Out] Button - set when an effect should disappear

Effect Template Library operation buttons: Add Effect, Delete all effects, Refresh library, Show

Text List

Click on a category to see the full list of effects

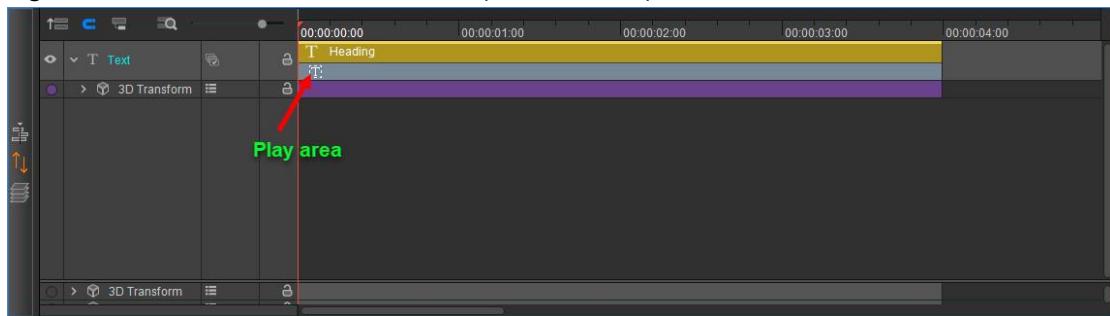

## 5.9. Text effect

Text is the most commonly seen title format on television. VisTitle adds a new scope to how text can be played, including Whole Text, Line by Line, Letter by Letter, enter progressively exit instantly, and much more. The user can add play areas and styles according to need.

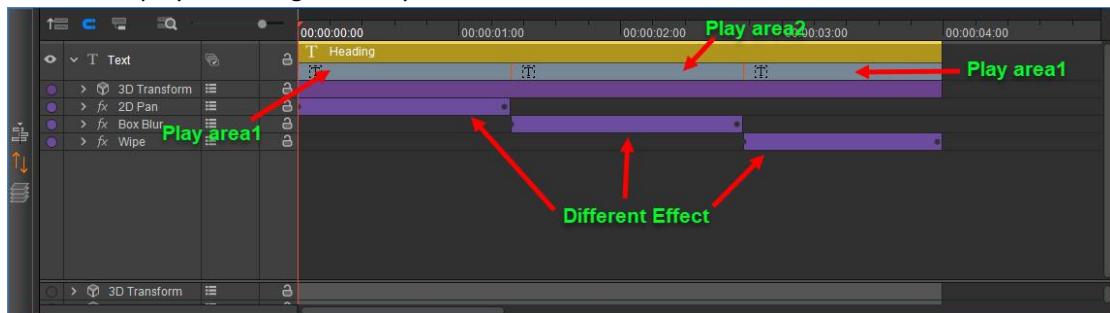

### 5.9.1. Setting play area

Right-click on the text bar in the Timeline (shown before) to see the context menu:

<ul style="list-style-type: none"> <li><input checked="" type="checkbox"/> Enable Area</li> <li>  Add Area</li> <li>  Delete Area</li> <li>  Play by char (in)</li> <li>  Play by char (out)</li> <li>  Play by line (in)</li> <li>  Play by line (out)</li> <li><input checked="" type="checkbox"/> Play by Text</li> <li>  Frequency Value</li> <li>  Uniform Area</li> <li>  Reset Area</li> </ul>	<ul style="list-style-type: none"> <li>Enable/Disable</li> <li>Add area in Timeline</li> <li>Delete area in Timeline</li> <li>Text enters letter by letter</li> <li>Text exits letter by letter</li> <li>Text enters line by line</li> <li>Text exits line by line</li> <li>Whole text instantly visible</li> <li>Sets play frequency</li> <li>Sets uniform play areas</li> <li>Resets play area</li> </ul>
---	---

Text will be play according to set style and effects.

In the picture above you can see three play areas, each with its own style:

The first play area is set to play by letter, 0.2 frequency, with effects shown in the red field.

The second play area is set to play whole text, with effects in the red field.

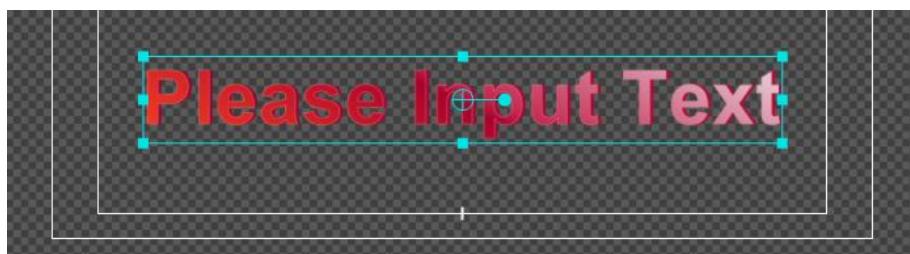

The third play area is set to play by letter, 0.2 frequency, with effects in the red field.

Example

Curl in by letter

Flash whole text

Fade out by letter

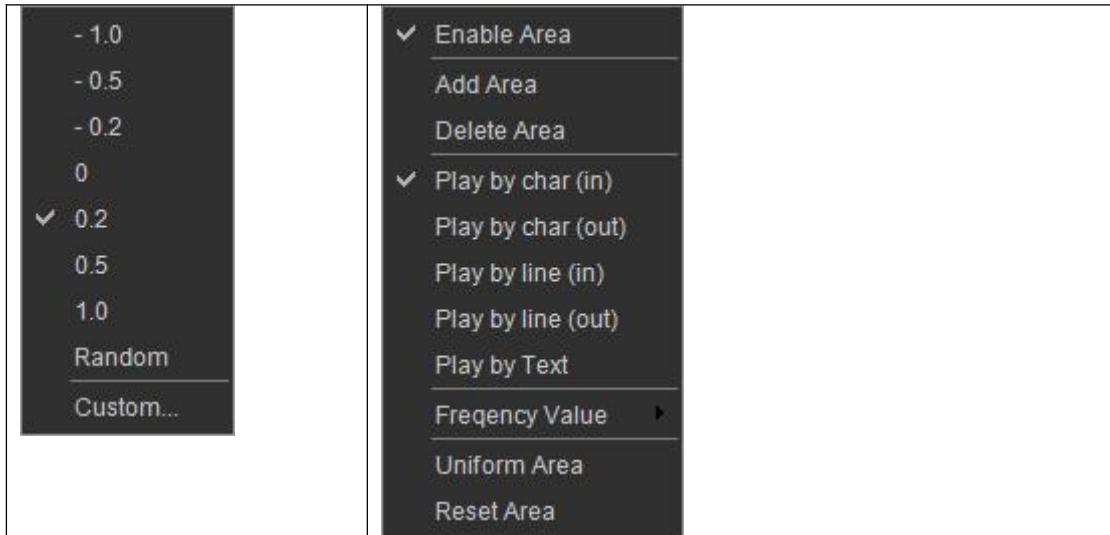

### 5.9.2. Play Frequency and Duration

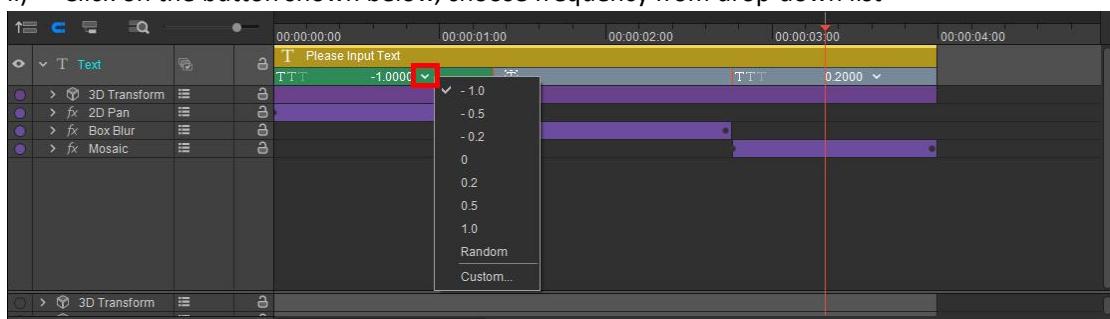

Frequency (q) must be between -1.0 and 1.0, used to determine letter/line in time, play time etc.

- 1) Frequency only has effect when play by letter/line is set.
- 2) Frequency can be set in three ways:

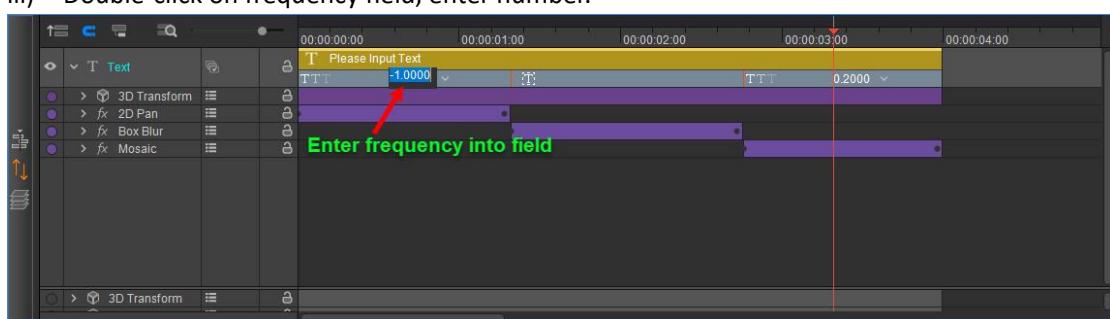

- i) Right-click, set frequency from context menu

- ii) Click on the button shown below, choose frequency from drop-down list

- iii) Double-click on frequency field, enter number.

After setting frequency, In/Out points and time will be set automatically using this method:

Play time = T, N. of Items = n, other effect time = t, item = i, then:

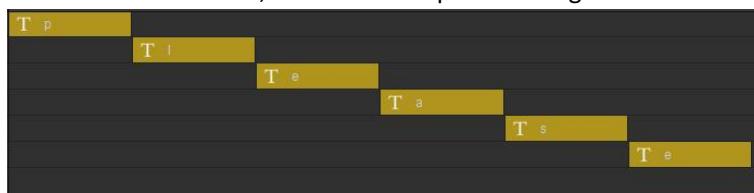

Play item In/Out intervals =  $t * q$

Play item In/Out =  $i * t * q$

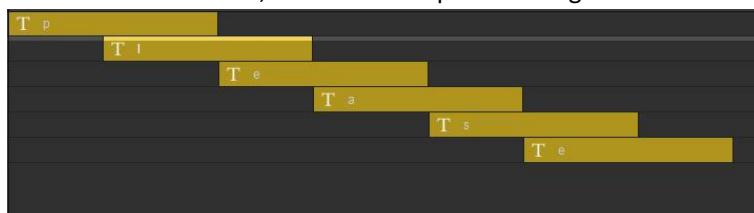

Play item effect =  $T / ((n-1) * q + 1)$

Example: five items in 100 frames

- At frequency 1.0 every effect execution time will be  $100 / ((5-1) * 1.0 + 1) = 20$  frames, intervals at  $20 * 1.0 = 20$  frames, as in the example to the right.

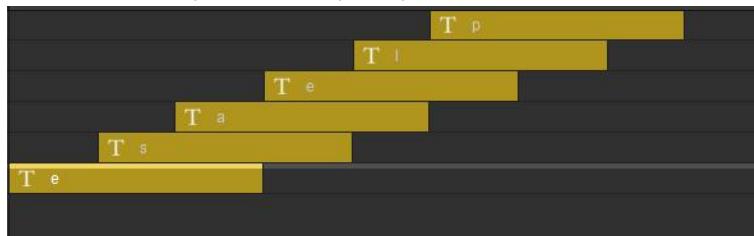

- At frequency 0.2, every effect execution time will be  $100 / ((5-1) * 0.2 + 1) = 55$  frames, intervals at  $55 * 0.2 = 11$  frames, as in the example to the right.

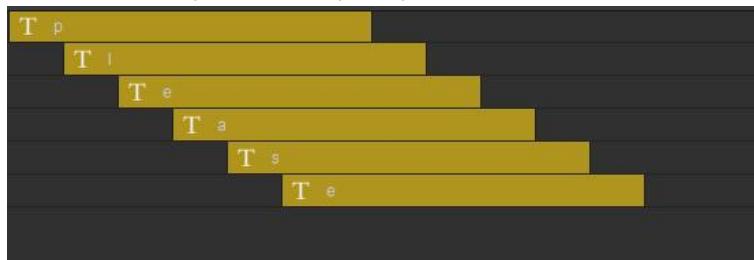

Frequency +/- determines play order. Example:

Timeline of every item at frequency 0.2

Timeline of every item at frequency -0.2

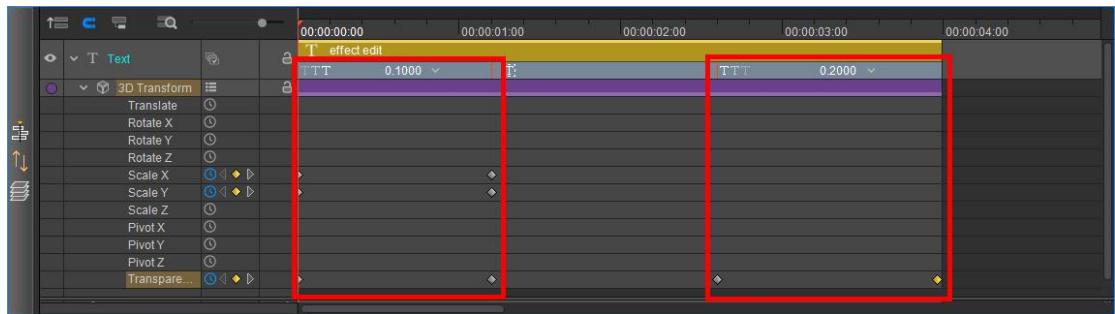

### 5.9.3. Play Whole Text

If set to play as whole text, the entire object will appear instantly.

### 5.9.4. Play In/Out by Letter

In play in/out by letter, every letter will appear according to frequency and effect settings

Scale In By Letter, frequency 0.1

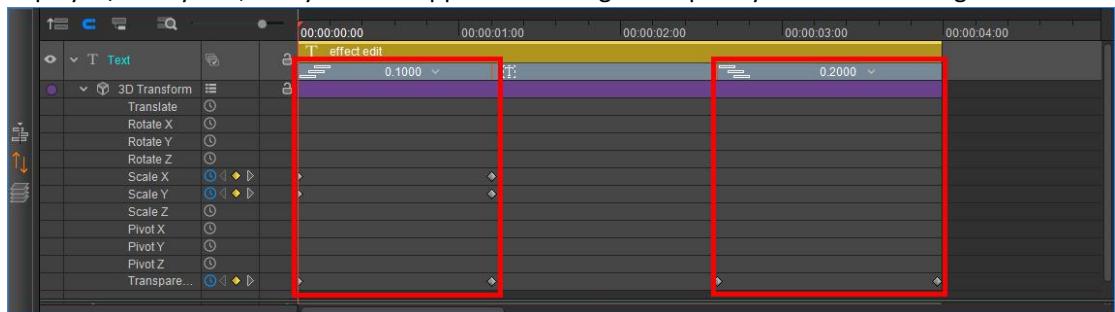

Fade Out By Letter, frequency 0.2

### 5.9.5. Play In/Out by Line

In play in/out by line, every line will appear according to frequency and effect settings

Scale In By Line, frequency 0.1

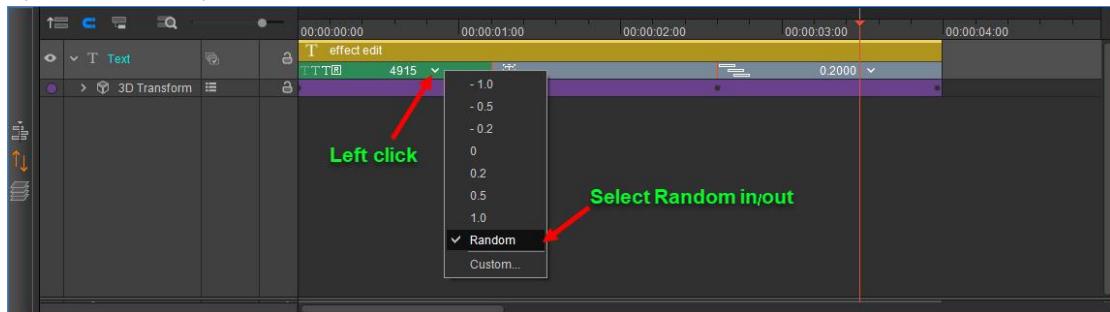

Fade Out By Line, frequency 0.2

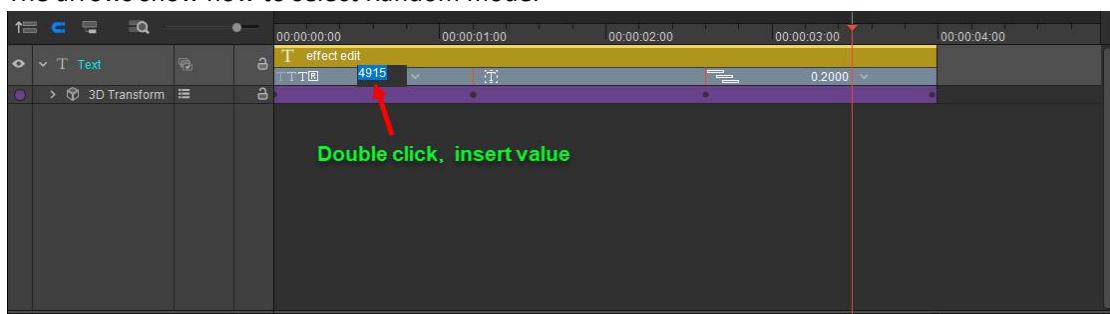

### 5.9.6. Random In/Out Text

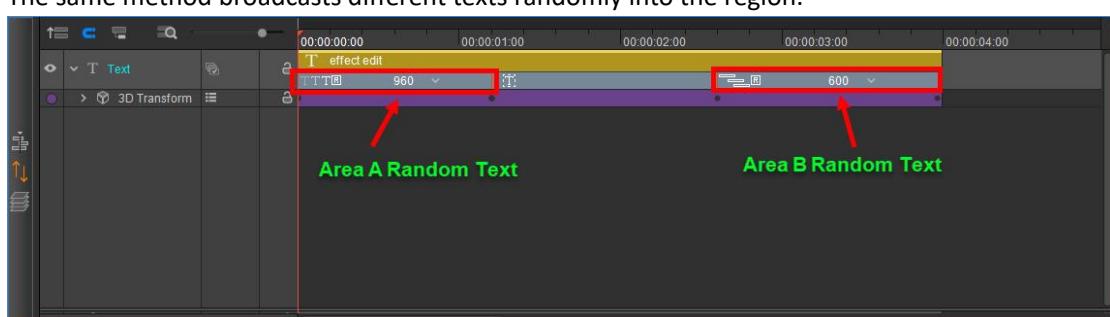

Random Text is a subtitle with special effects, with text entering/exiting the screen randomly line by line or word by word. Select as shown below:

The arrows show how to select Random mode.

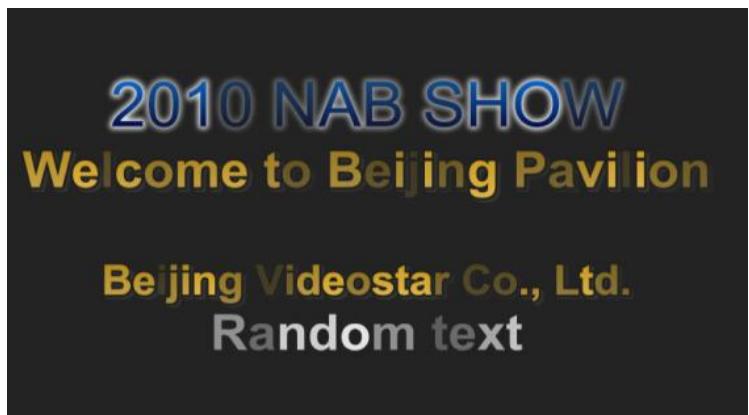

The same method broadcasts different texts randomly into the region.

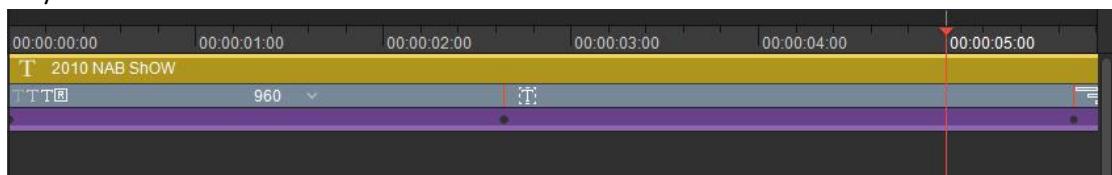

Set A to play randomly line by line and set B to play randomly word by word, as shown below:

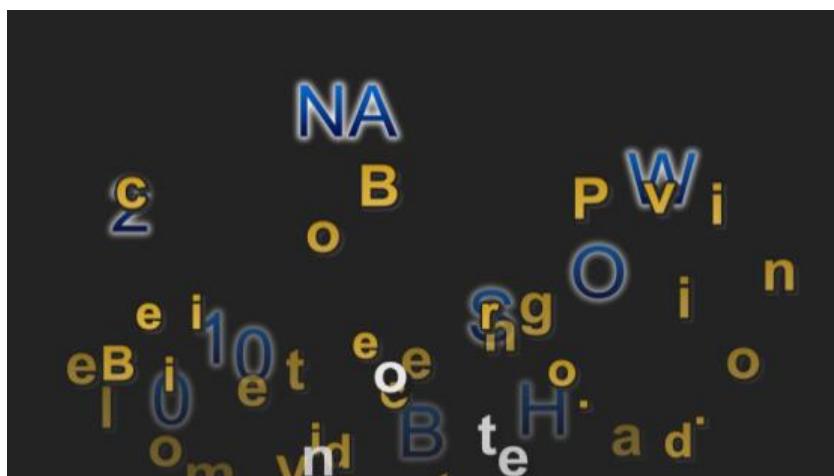

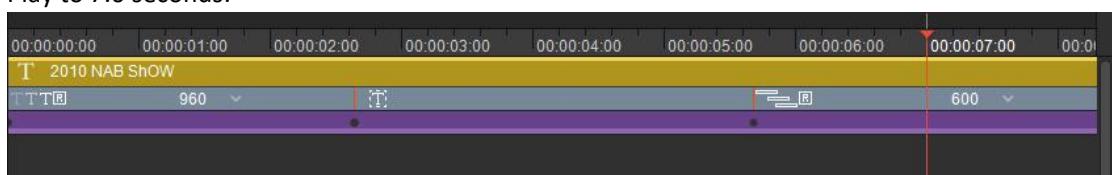

Play to 1.5 seconds:

Play to 5.0 seconds:

Play to 7.0 seconds:

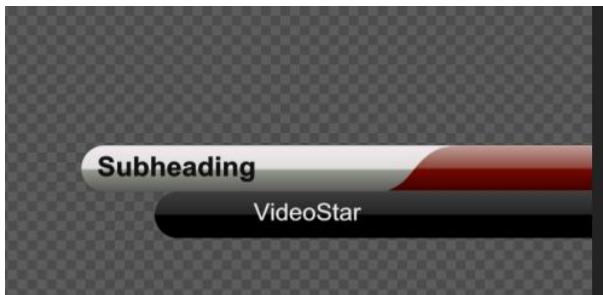

## 5.10. Object Group Effect

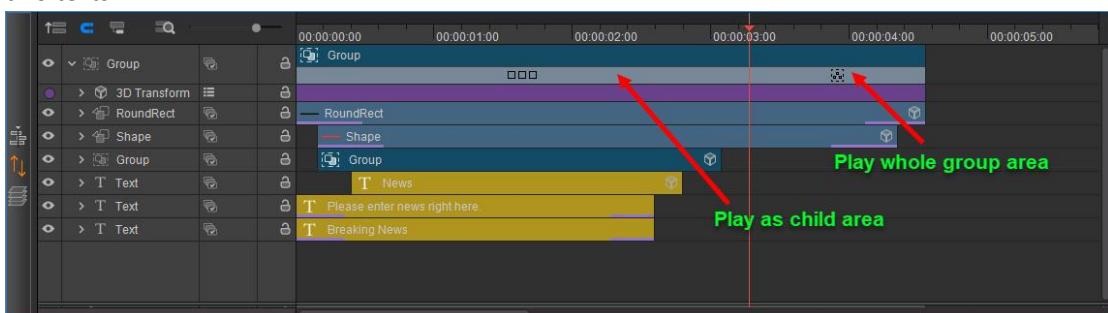

Object Groups are special types of objects which can be used to edit multiple shapes (movement, scale, rotation, etc.), and can be played independently with many effects.

### 5.10.1. Setting Play Area

Object Group play areas are similar to Text play areas. The Object Group will play set effects within the allotted time in the Timeline. These setting can be changed by right-clicking and using the context menu.

In the picture above you can see an example of an Object Group, composed of four objects and two texts.

Right-click on the play area to choose play options

<ul style="list-style-type: none"><li><input checked="" type="checkbox"/> Enable Area</li><li><a href="#">Add Area</a></li><li><a href="#">Delete Area</a></li><li><input checked="" type="checkbox"/> Play by child</li><li><a href="#">Play as Group</a></li><li><a href="#">Uniform Area</a></li><li><a href="#">Reset Area</a></li></ul>	<ul style="list-style-type: none"><li>Enable Area Add area to the current timeline position</li><li>Delete area</li><li>Play as child (individually)</li><li>Play as group</li><li>Uniform</li><li>Resets Area</li></ul>
--	--

Object Group will be played according to set style and effects.

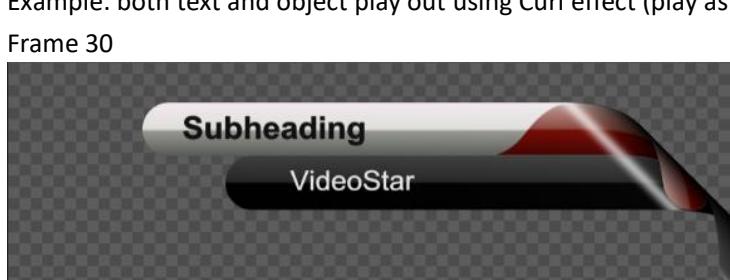

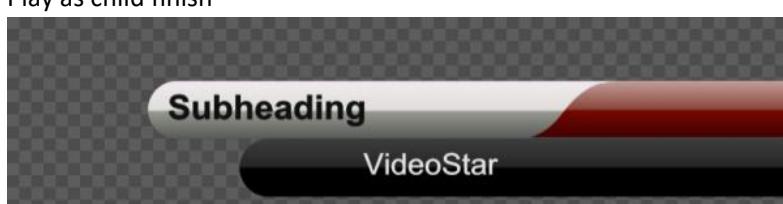

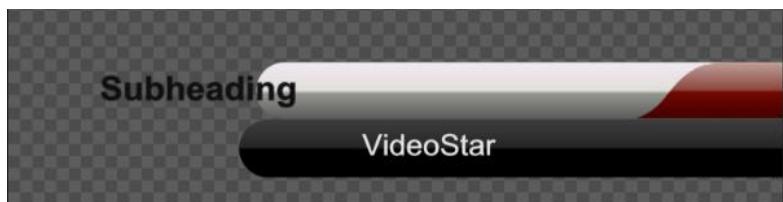

In the example above the Object Group is split in two

Part 1. Set to play as child, each object will use its own effects.

Part 2. Set to play as group, all objects will be played using group effects (in this case Curl effects)

Example: Text moving in from the left, object moving in from the right (play as child)

Frame 10

## 5.10.2. Play as Group

If set to Play as Group, effects will be played equally to all objects.

## 5.10.3. Play as Child

If set to Play as Child, objects will play their own effects and group effects will be ignored.

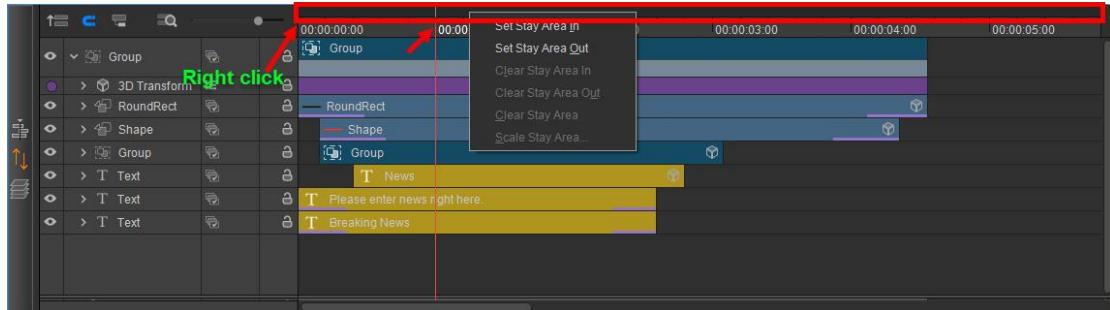

## 5.11. Setting Stay Area

### 5.11.1. Setting Stay Area for Title

If you want to change duration of dynamic title, when setting stay areas, animation effect will not be changed.

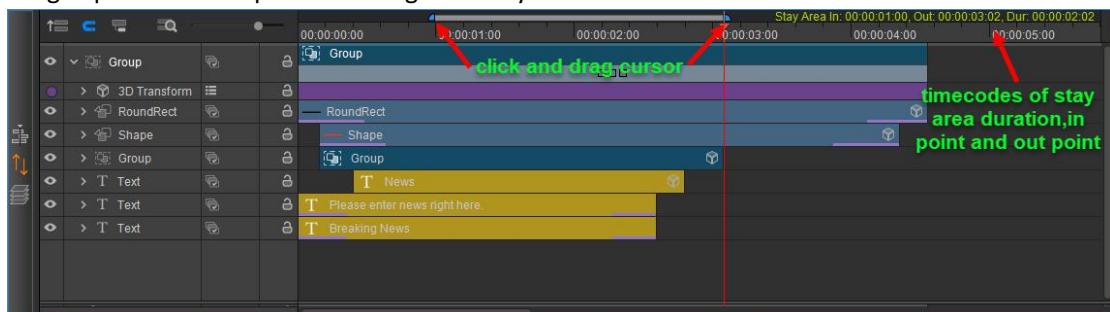

#### Add/Delete Stay Area

Right click on the space above timeline, and choose “Set Stay Area In” to add a stay area in. You can add a stay area out using the same way.

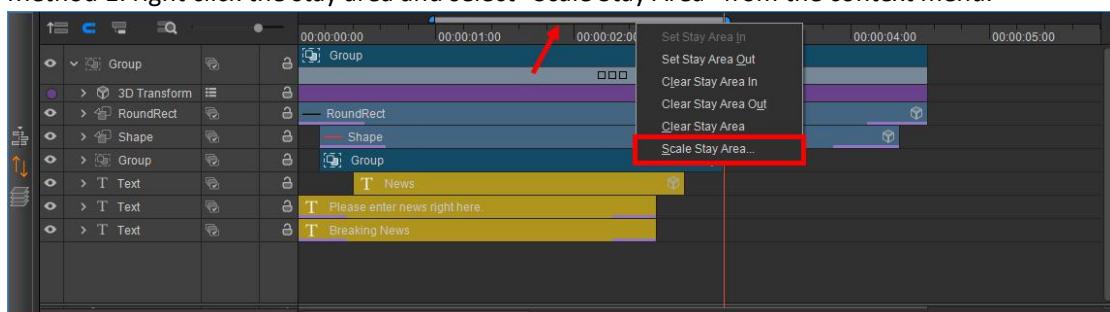

Note: choose options from the context menu to clear stay area, scale stay area and so on.

Drag in point and out point to change the stay area duration.

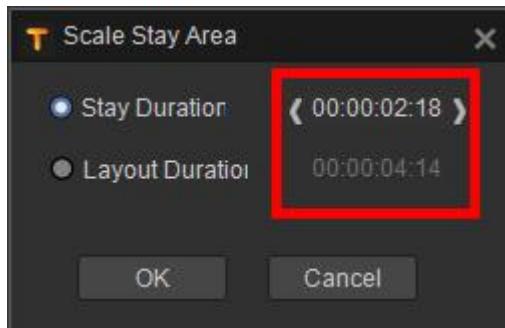

#### Scale Stay Area

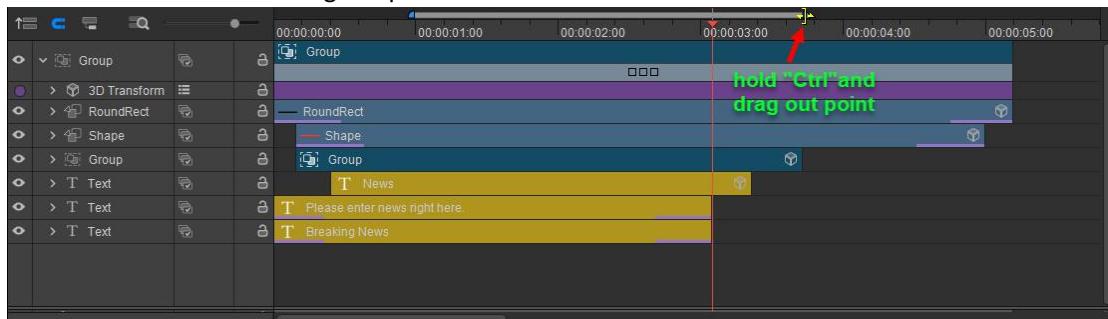

Method 1: right click the stay area and select “Scale Stay Area” from the context menu.

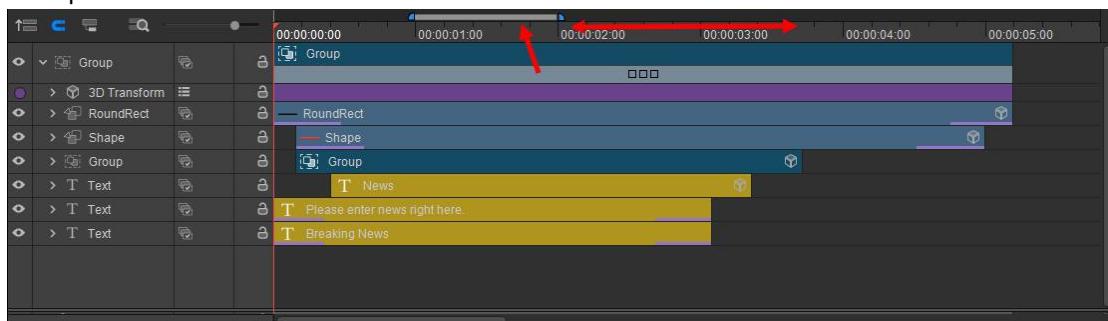

Type in desired timecodes in the popup Scale Stay Area window and then press **Enter**.

Method 2: hold **Ctrl** and drag out point to scale.

Example:

Object duration changes, when scaling the stay area, but animation effect does not change.

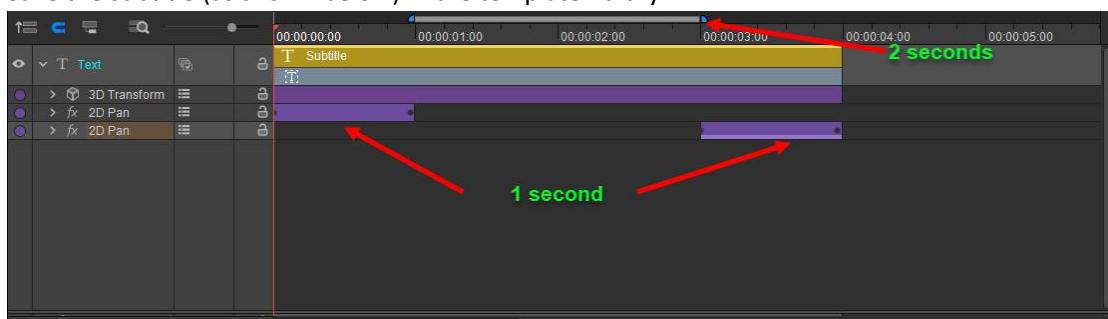

## 5.11.2. Setting Stay Area for Subtitle

When setting stay areas, subtitle will automatically scale stay area to make sure the same in/out effect.

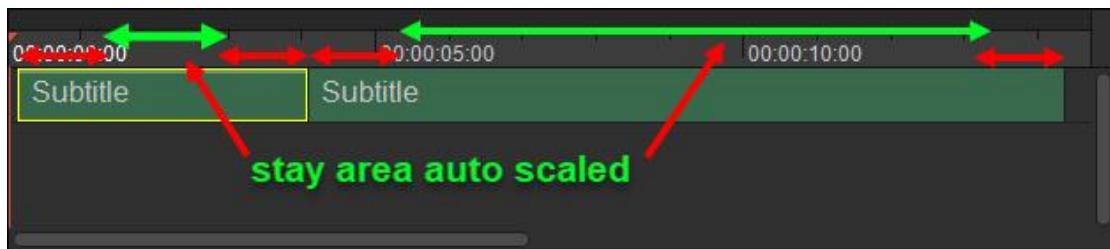

### Set Stay Area for Subtitle

Use the operation flow above to set stay area.

Save the subtitle (as shown below) in the template library.

In EDIUS create subtitle using the template (Please refer to the instructions relevant sections of user manual) to see the subtitle timecodes as shown below.

The time marked by the red double arrow is in/out screen effect duration and marked by the green double arrow is stay area of effect.

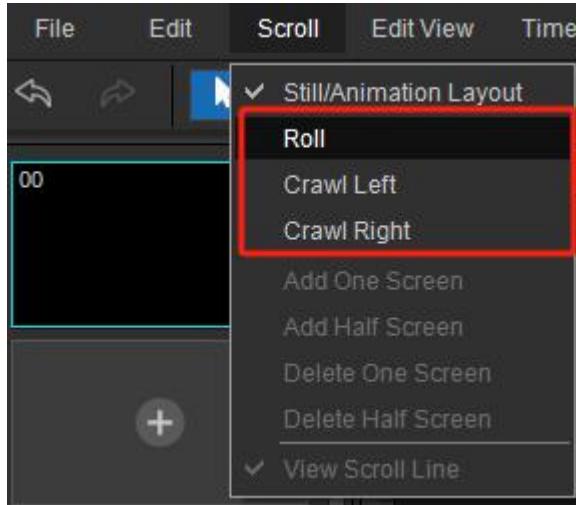

# Chapter Six Create Roll/Crawl

The roll screen is often seen at the end of a movie (in the form of credits). In VisTitle you will find many powerful roll functions, including 3D roll and Mask roll screens.

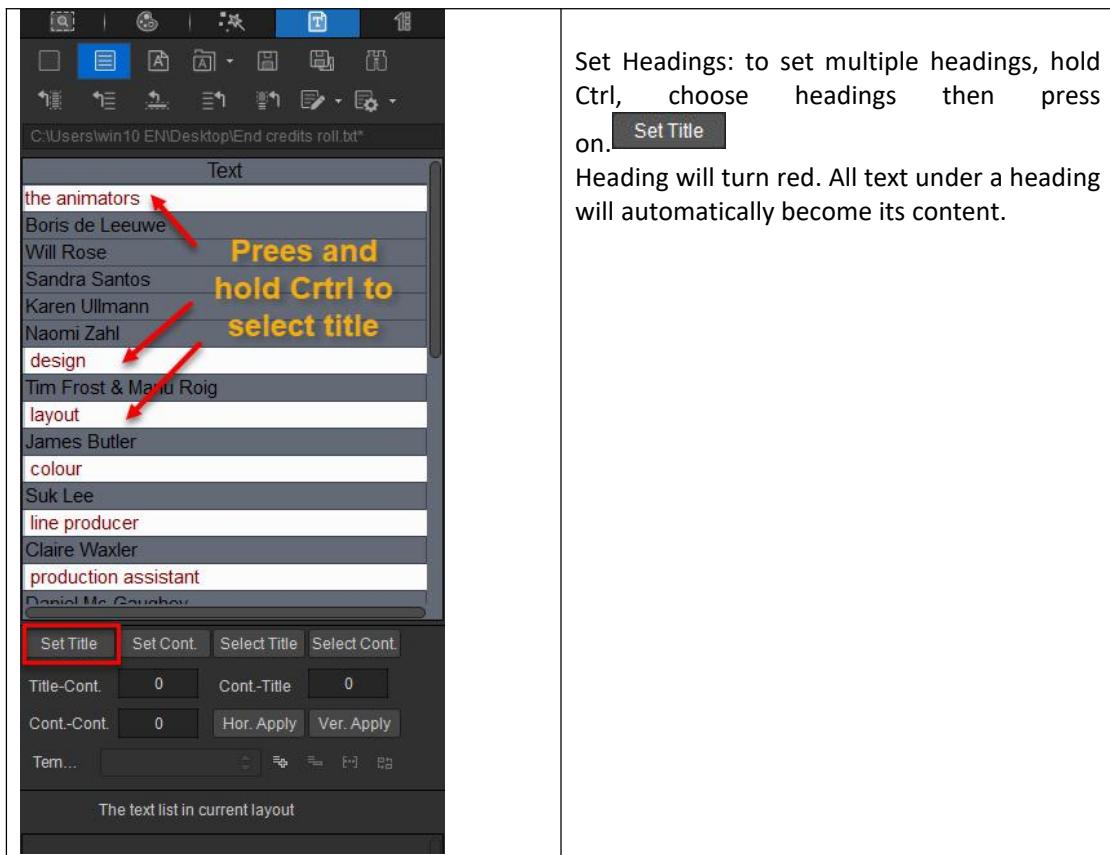

## 6.1. Operation flow

Most rolls are aligned, and with VisTitle this can be done quickly and conveniently.

- 1) In EDIUS, open VisTitle. (Start VisTitle in NLE systems: There is slight difference in how to start VisTitle in different NLE systems. Please refer to VisTitle Quick Guide for instructions.)
- 2) In the Menu choose scroll, set roll type (up, right, left), and VisTitle will automatically change the current layout into a roll screen.

- 3) Import preset roll screen text onto the Edit Screen.

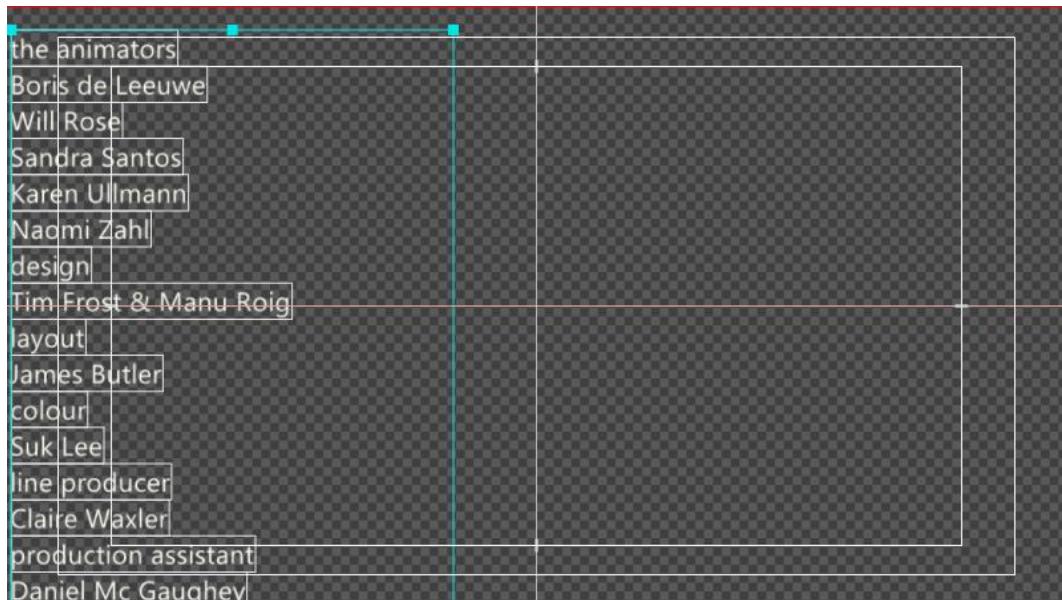

Set Headings: to set multiple headings, hold Ctrl, choose headings then press on.

**Set Title**  
Heading will turn red. All text under a heading will automatically become its content.

- 4) Press Ctrl+A to select all text, then press  button. The text will appear in the Edit Screen. Use Vertically Center-Aligned and Align to the Screen's Horizontal Center to centre in toolbar. Example:

Apply "Vertically Center-Aligned" and "Align to the Screen's Horizontal Center to center" in the toolbar.

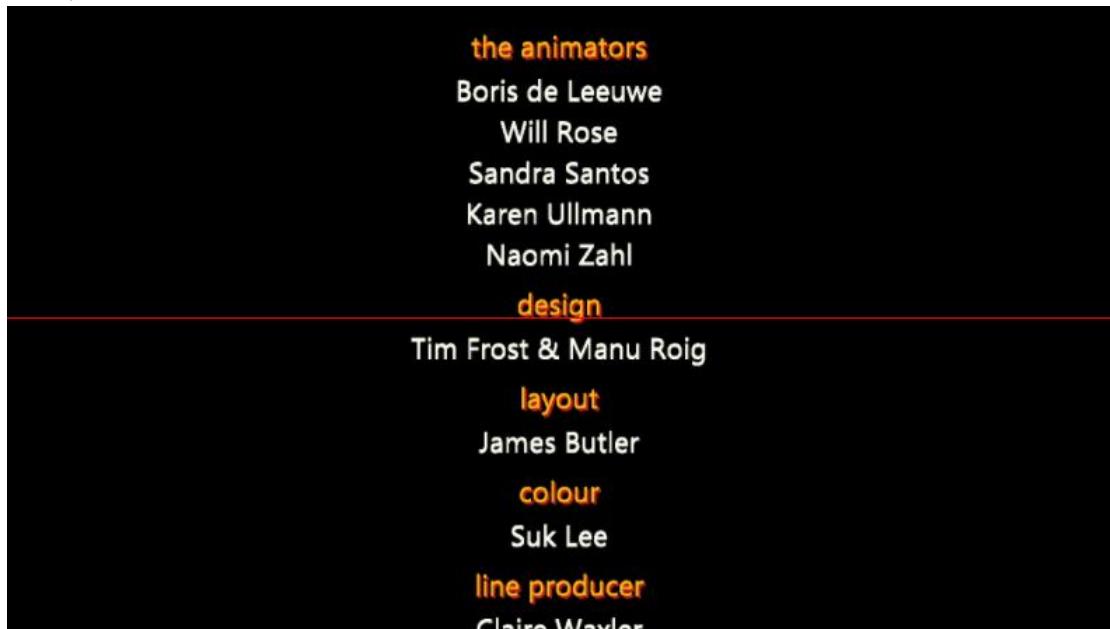

- 5) Set line intervals using parameters in the image below, then click on **Ver. Apply**.

<b>Set Title</b>	<b>Set Cont.</b>	<b>Select Title</b>	<b>Select Cont.</b>
Title-Cont.	<b>10</b>	Cont.-Title	<b>20</b>
Cont-Cont.	<b>5</b>	<b>Hor. Apply</b>	<b>Ver. Apply</b>

Example:

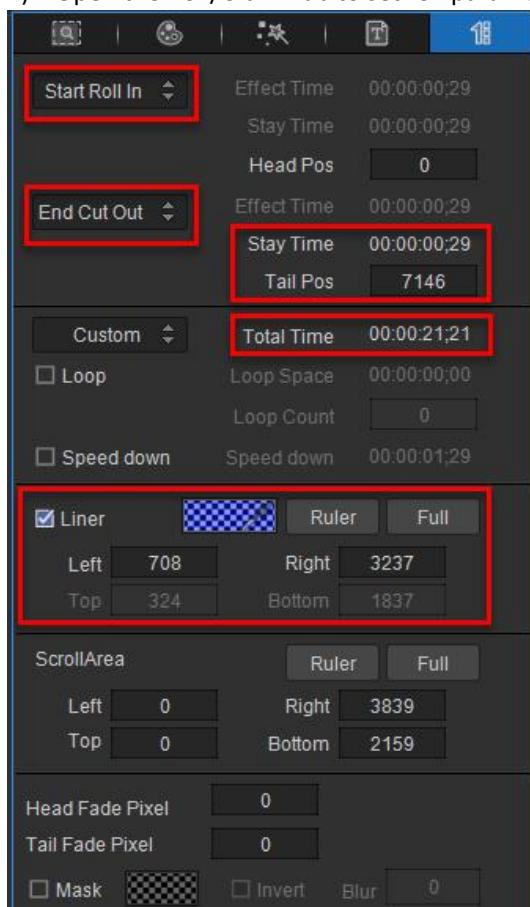

- 6) Press **Select Title** to choose all headings, then apply Shader using the Shader Tab.

Example:

The same method can be applied to Contents.

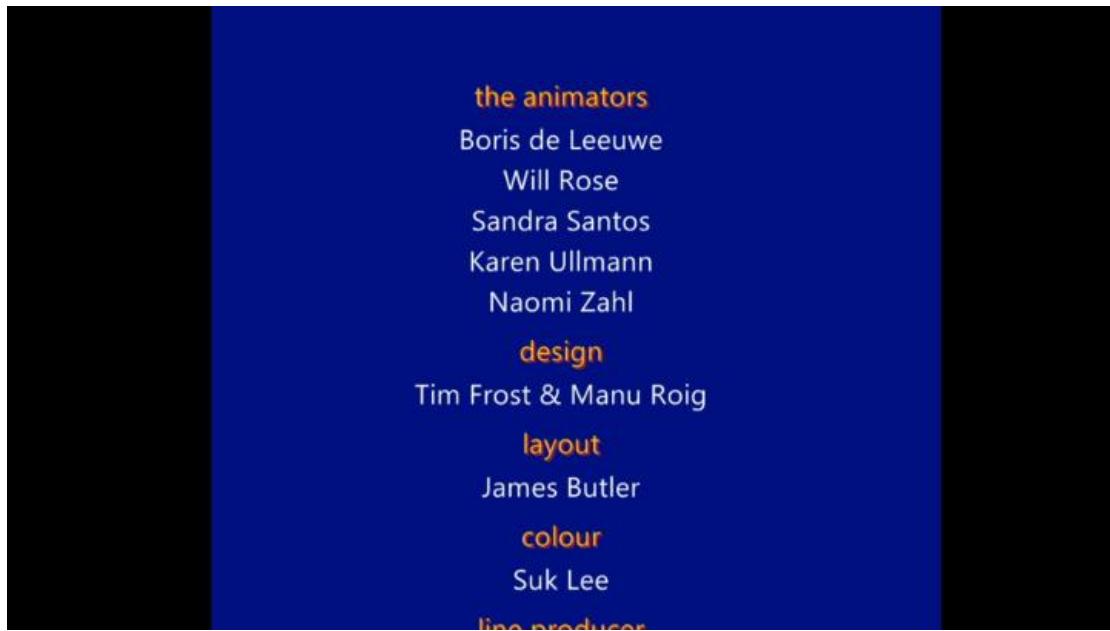

#### 7) Open the Roll/Crawl Tab to set roll parameters.

Here you can set In/Out format, position and time of the tail, total time, background color, and area.

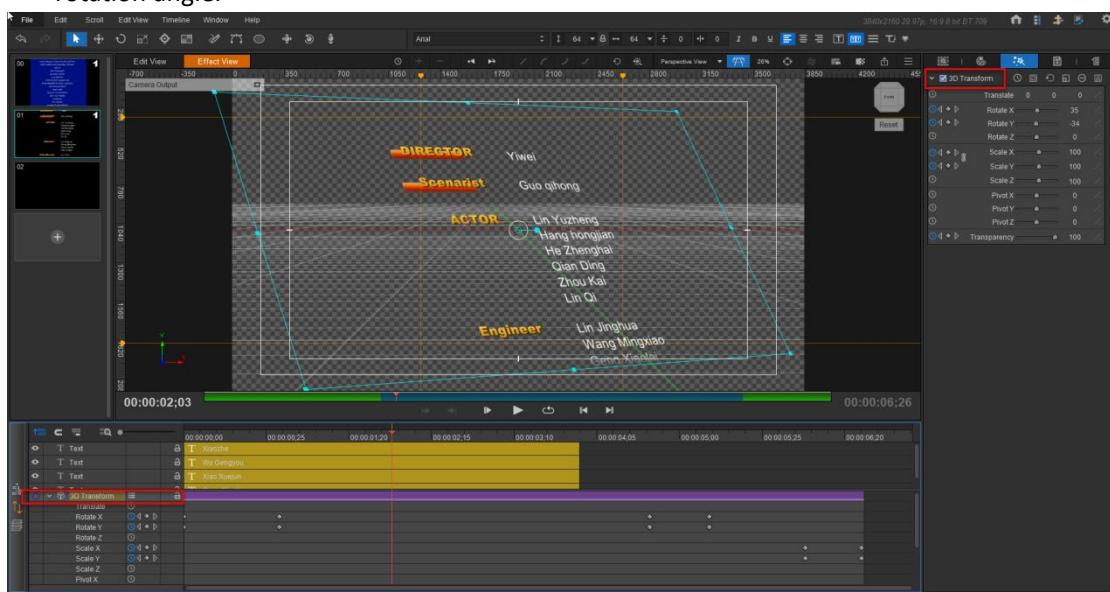

#### 8) Save to Template Library when done, and use in EDIUS.

#### 9) In the EDIUS Timeline, double-click on a roll title to edit text or set roll play time.

## 6.2. Create 3D roll/crawl

- 1) Use the operation flow above to create a roll/crawl screen.
- 2) Press F10 to activate Effect Edit Mode, and activate 3D Transform in the Effect Tab.
- 3) Click on the Timeline 3D Transform track, and use 3D rotate modulator tools to set roll screen rotation angle.

## 6.3. Other parameters

### 6.3.1. Fade In/Out

Head Fade Pixel	120
Tail Fade Pixel	120

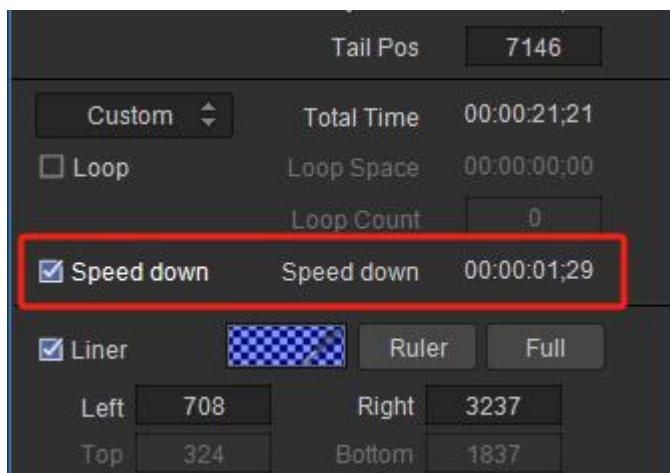

### 6.3.2. Scroll Area

ScrollArea		Ruler	Full
Left	1265	Right	2621
Top	324	Bottom	1836

### 6.3.3. Speed down

# Chapter Seven    Dynamic Texture

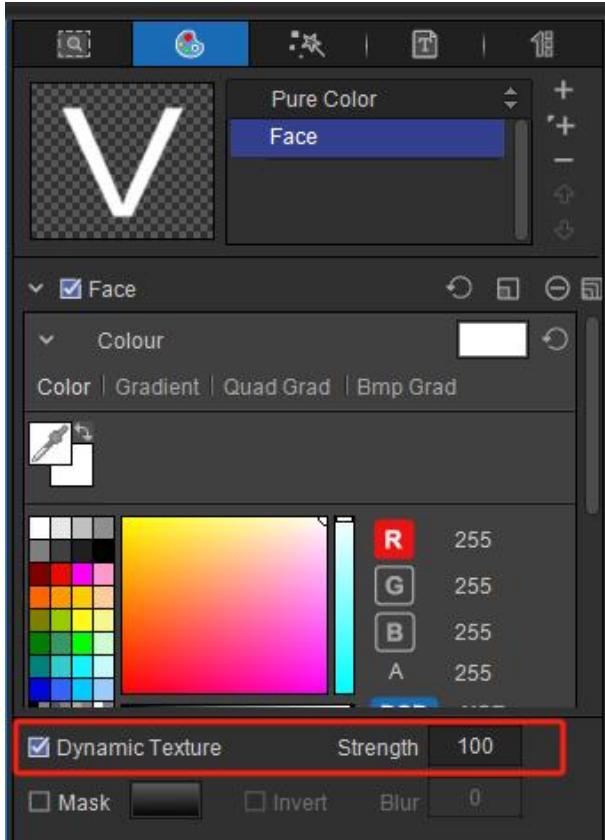

When using Shader, other than normal Face, Edge and Shadow bitmap you can also use Dynamic Texture properties. When played, the object will display dynamic change effects. More than 100 preset templates are available.

Examples:

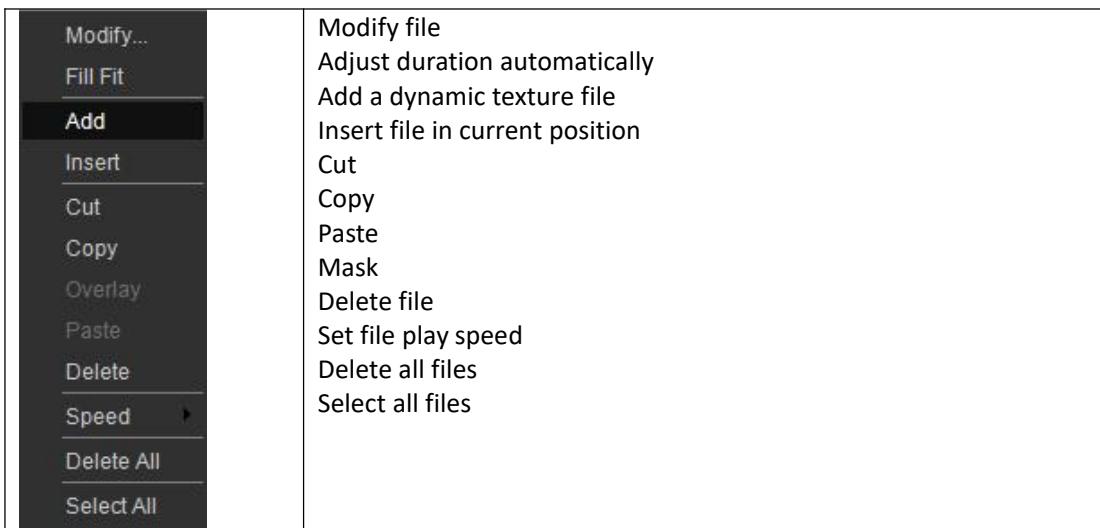

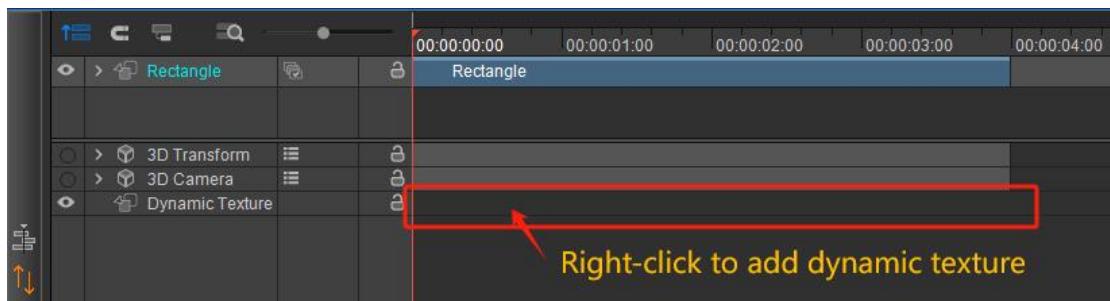

## 7.1. Applying Dynamic Texture

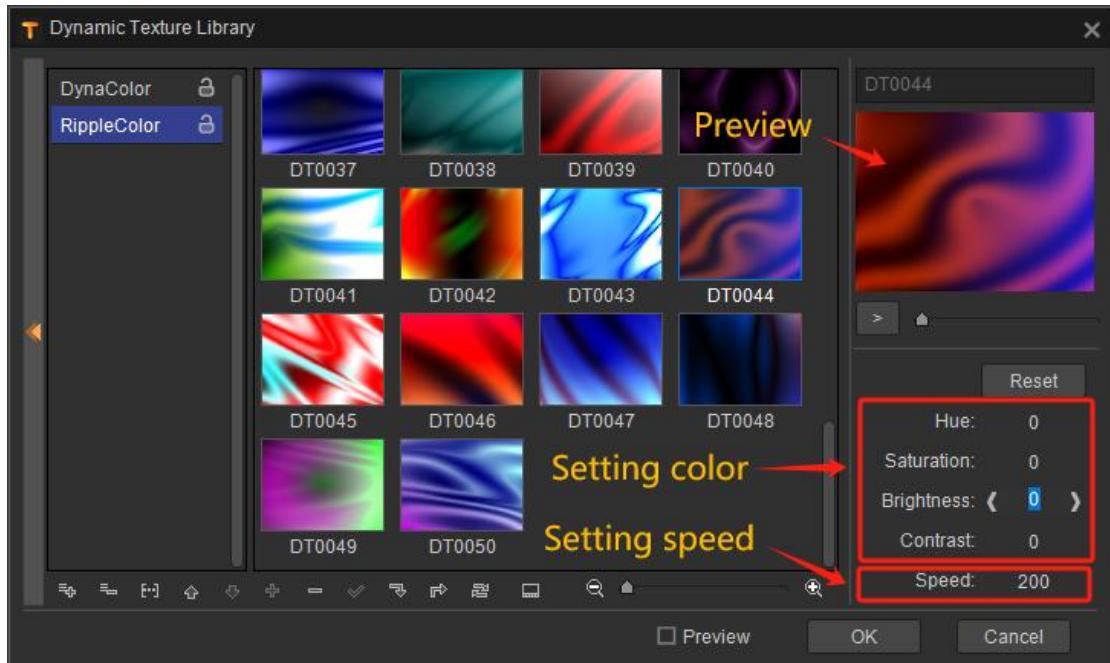

- 1) Create an object or text.
- 2) In the Shader Tab area, activate Dynamic Texture and set Strength level (0-100). At 0 Dynamic Texture is not applied, at 100 it completely replaces the current object Shader.

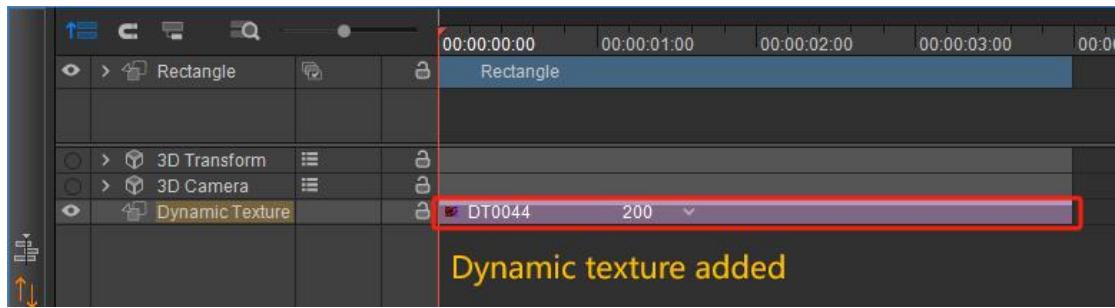

- 3) Right-click the Dynamic Texture track in the Timeline and a context menu will appear.

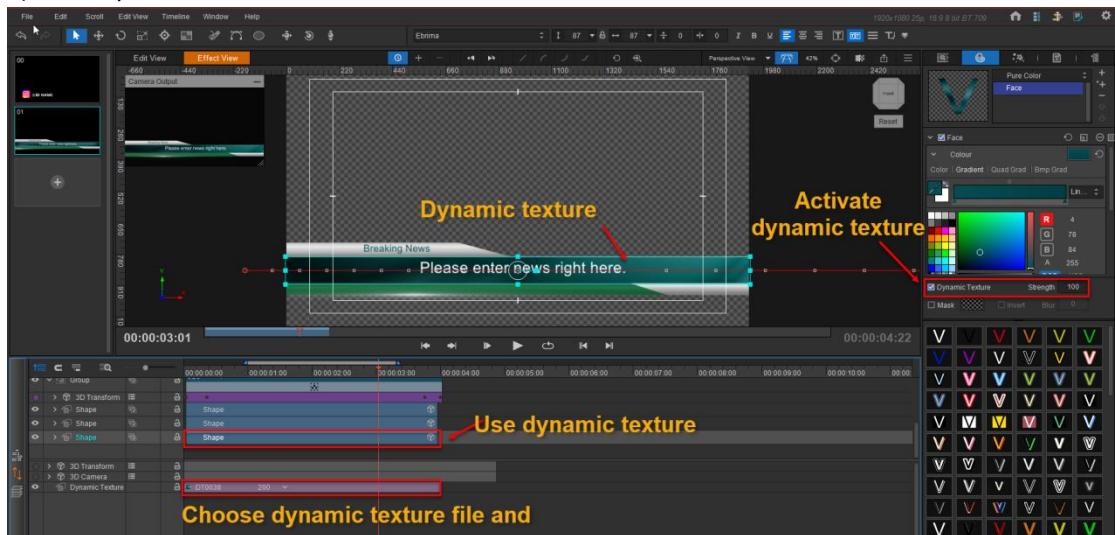

- 4) Choose Add, then select from the Dynamic Texture Library. You can make further modifications in this screen, including color and play speed. To apply, double-click on the template or select first and then click on OK.

- 5) A bar will appear on the track

- 6) Set the file In/Out points to mirror object In/Out points.
- 7) Example.

## 7.2. Rendreing

- 1) At any point in time, an object's dynamic texture is unique and can't have more than one. The dynamic texture will automatically choose the first Shader property (be it Face, Edge or Shadow).
- 2) For each layout there can only be one Dynamic Texture track, so all objects will make use of this file.
- 3) When rendering in real time, if the Dynamic Texture effects cannot be found, the object will apply the first Shader property (for example Face or Edge).

## 7.3. Examples

Dynamic Texture background 1

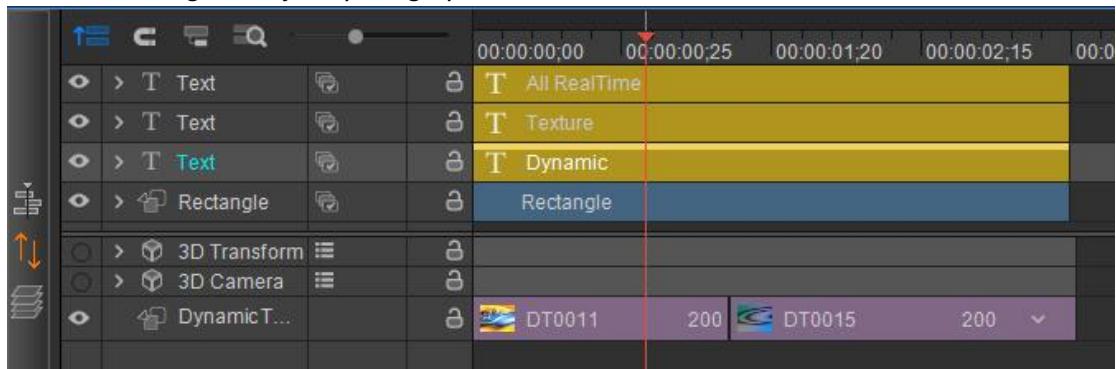

Dynamic Texture background 2

Text Face using Dynamic Texture

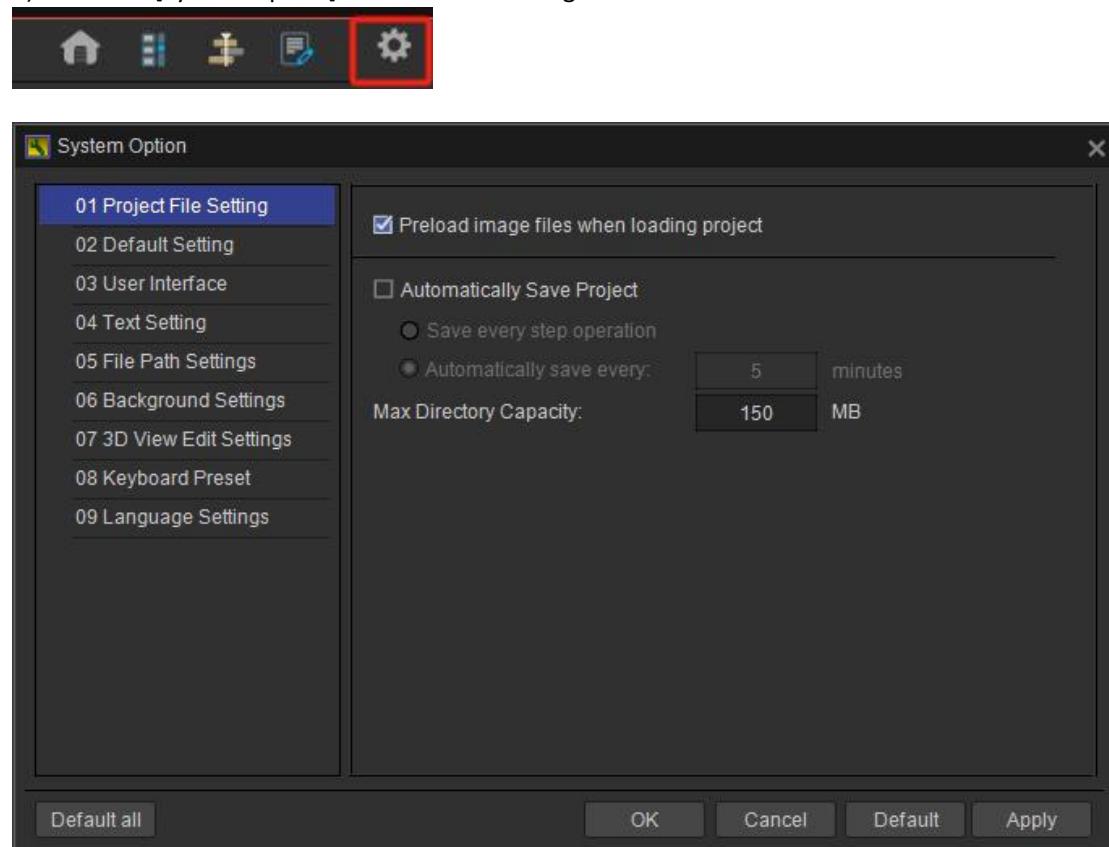

Text and Rectangle Face jointly using Dynamic Texture effects

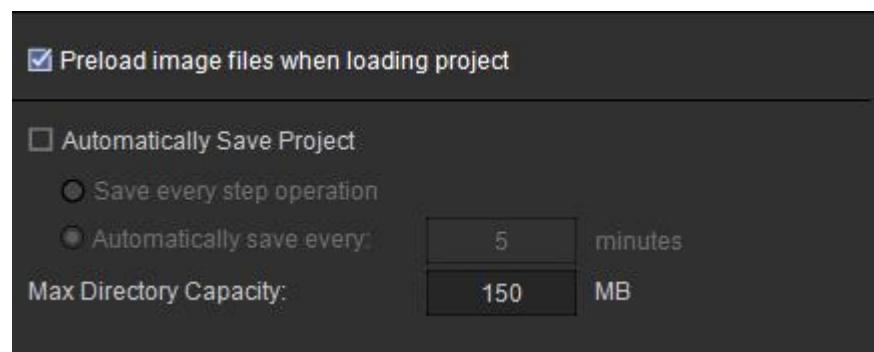

# Chapter Eight Applying Settings

Activate system settings

- 1) Press shortkey Ctrl+Shift+O
- 2) Click on [System Option] button at bottom right-hand corner

## 8.1. Project File Setting

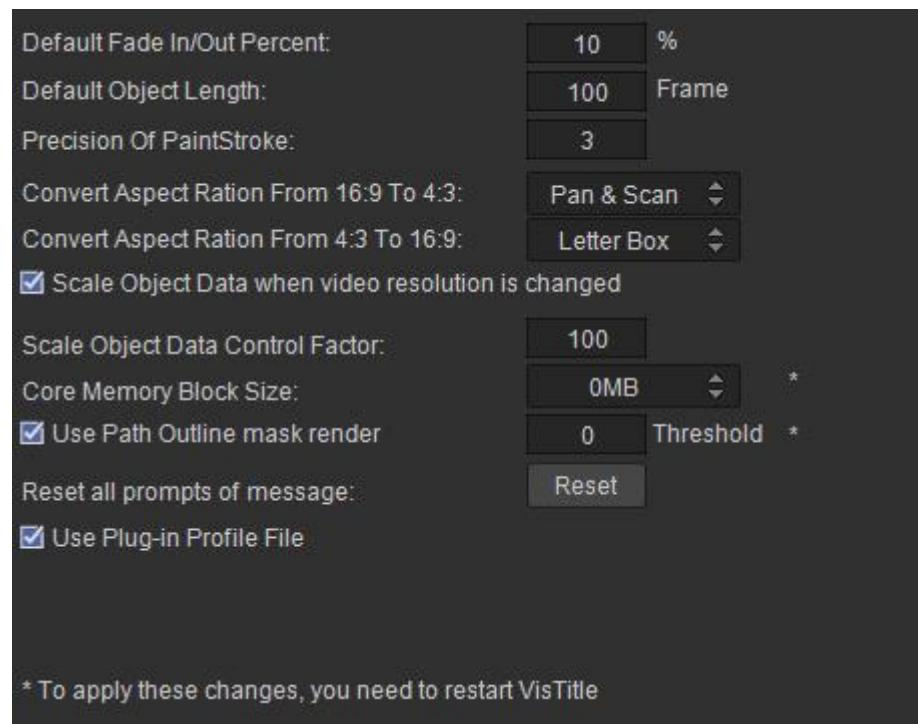

**Automatically Save Project:** whether save project automatically

**Save every step operation:** save every step operation in project

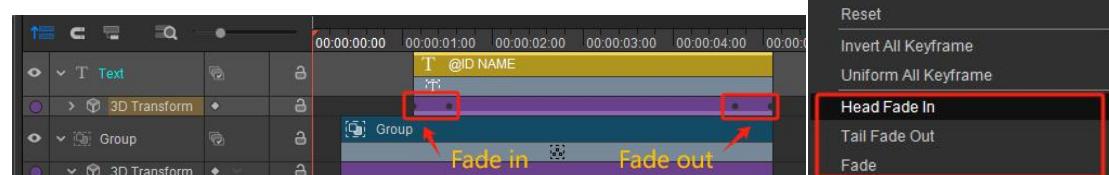

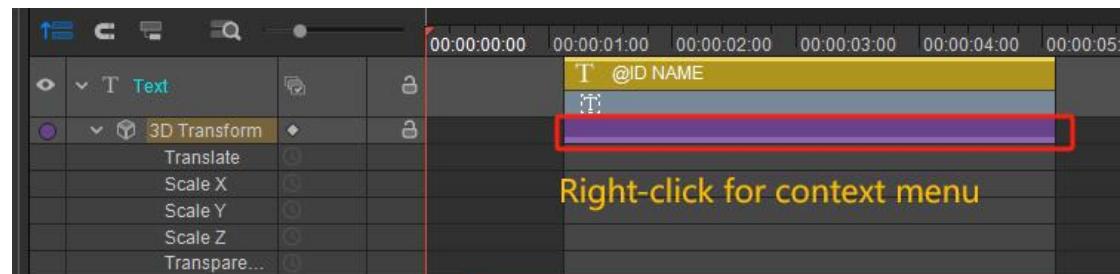

**Automatically save every \*\*\* minutes:** automatically save project every the specified time

**Max Directory Capacity:** set max capacity of auto save path

## 8.2. Default Setting

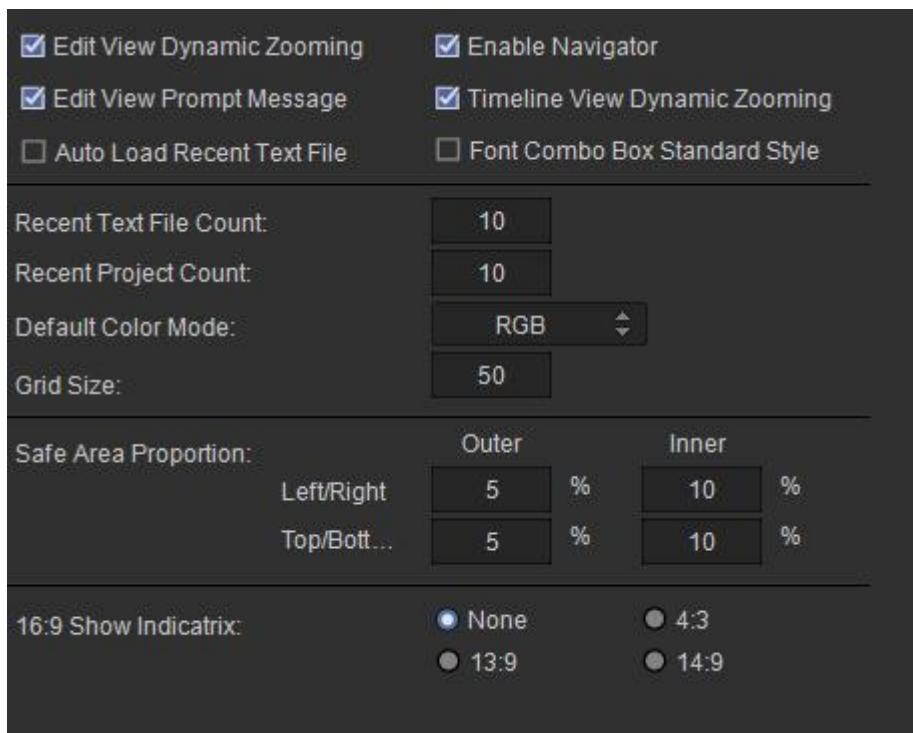

Default Fade In/Out Percent - applies default Fade In/Out settings for effects in the 3D Transform timeline track

Default Object Length - set default object play duration in the timeline

### 8.3. User Interface

Edit Screen Dynamic Zooming - double-click to adjust screen zoom

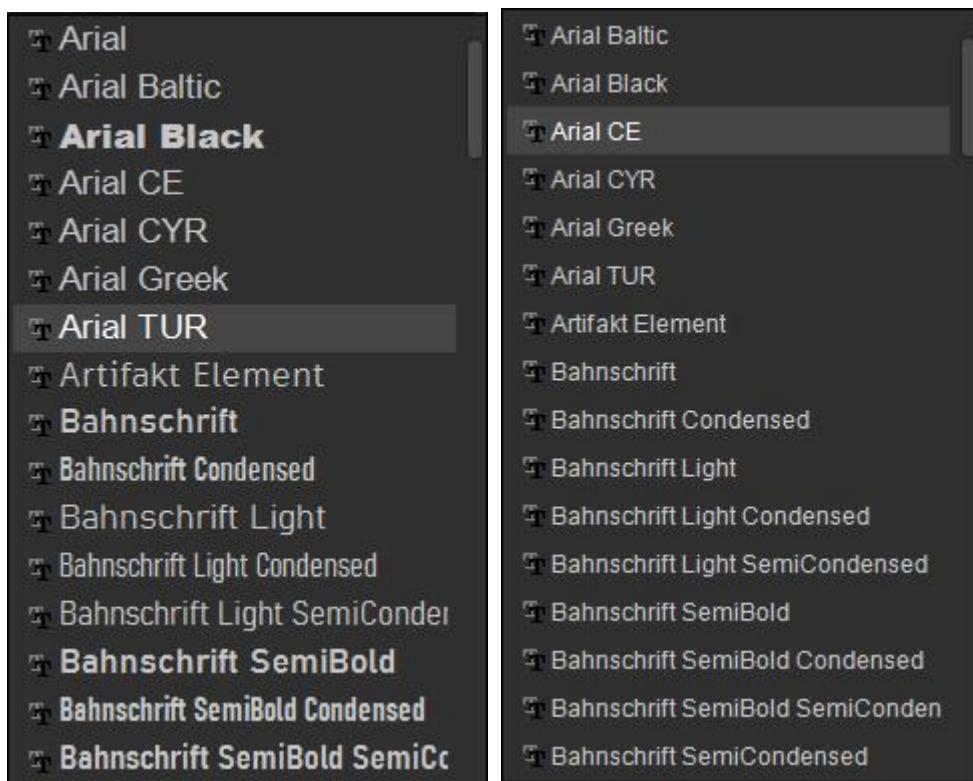

Edit Screen Prompt Message - prompt messages such as "Save File" or "Apply Effect"

Timeline Window Dynamic Zooming - double-click on the timeline to adjust window zoom

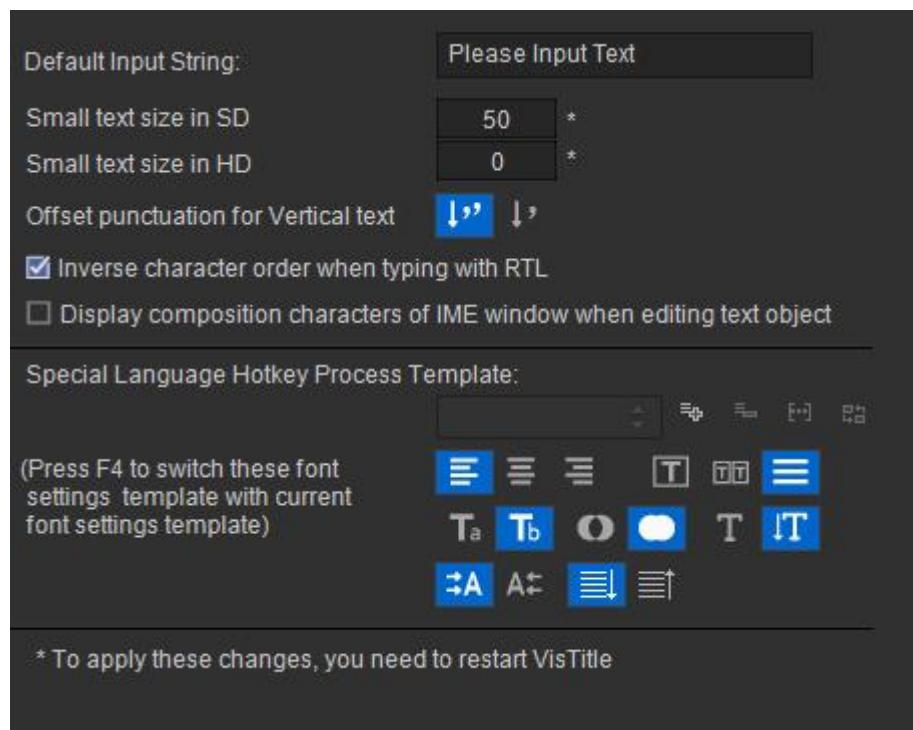

Auto Load Recent Text File - automatically load last used file at start up

Font Combo Box Standard Style - set font Standard list or Use Current Font list

Default Input String - press F2 and preset text will appear in Edit Screen

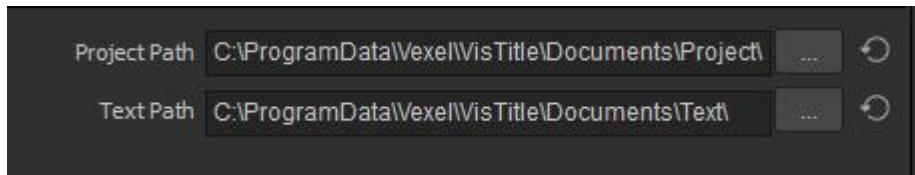

## 8.4. Text Setting

Set default input string.

Special Language Hotkey Process: switches font setting with current font setting

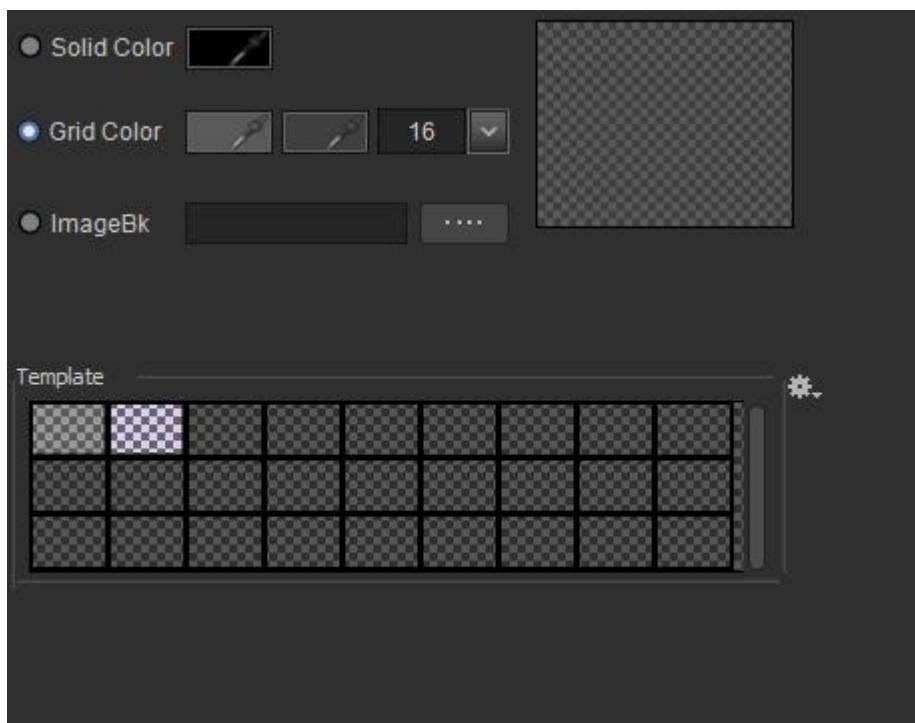

## 8.5. File Path Settings

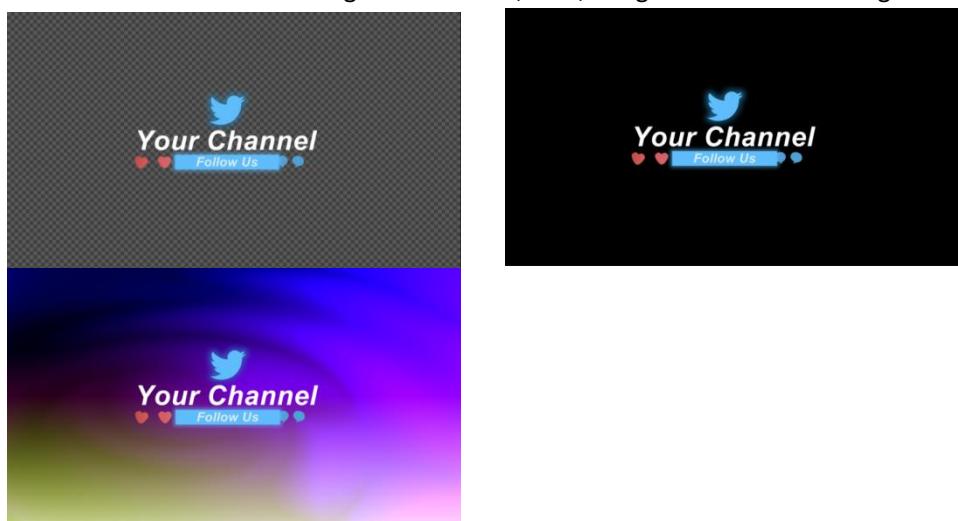

Project Path: sets project path

Text Path: sets text path

## 8.6. Background Setting

You can set Edit Screen's background as Solid, Grid, Image and save as a background template

### **8.6.1. Solid Color**

Sets one color as Edit Screen background.

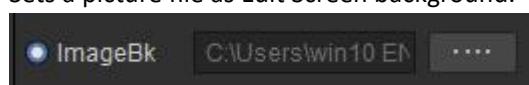

### **8.6.2. Grid Color**

Sets two colors as Edit Screen background.

### **8.6.3. Image Background**

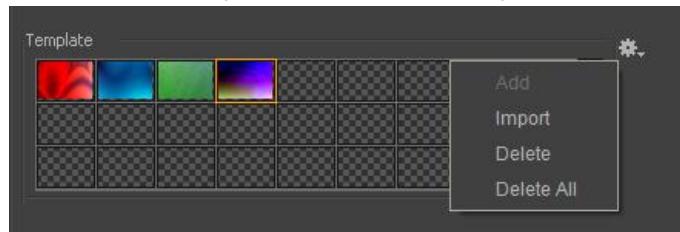

Sets a picture file as Edit Screen background.

### **8.6.4. Background Template**

To save as Background Template

- 1) Choose a background style.
- 2) Choose color or picture file.
- 3) Click on the [Options] button, from drop-down list choose:

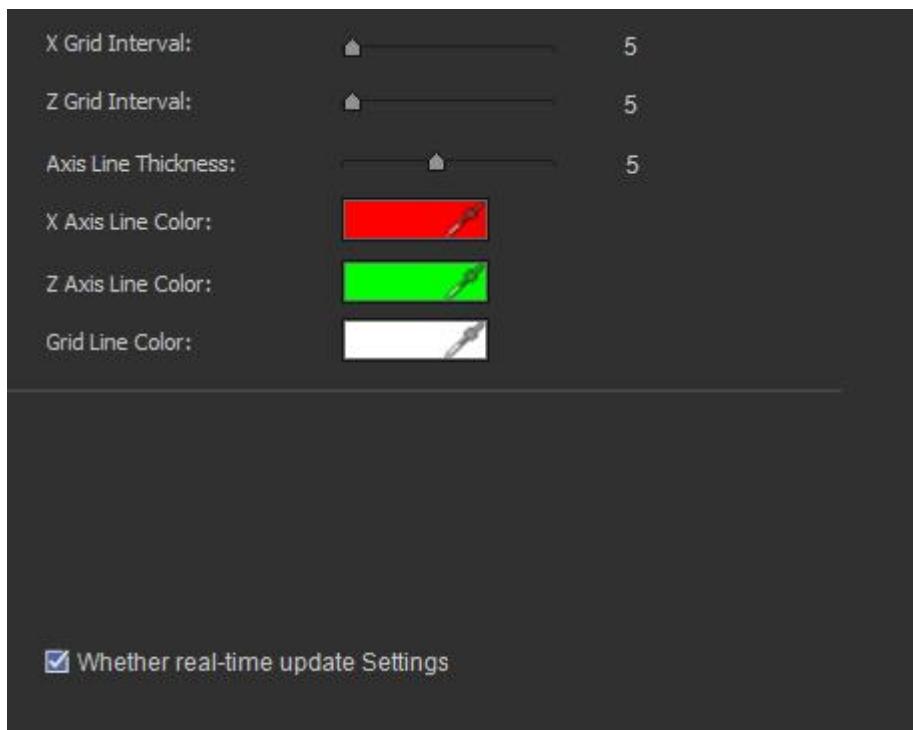

Add: adds background as template

Import: import a background

Delete: deletes background template

Delete All: deletes all templates

## 8.7. 3D View Edit Settings

**X Grid Interval:** Setting grid interval in X direction

**Z Grid Interval:** Setting grid interval in Z direction

**Axis Line Thickness:** Setting the value of the axis thickness parameter

**X Axis Line Color:** Setting the X-axis line color

**Z Axis Line Color:** Setting the Z-axis line color

**Grid Line Color:** Setting the grid line color

Enable/Disable Live Update Settings

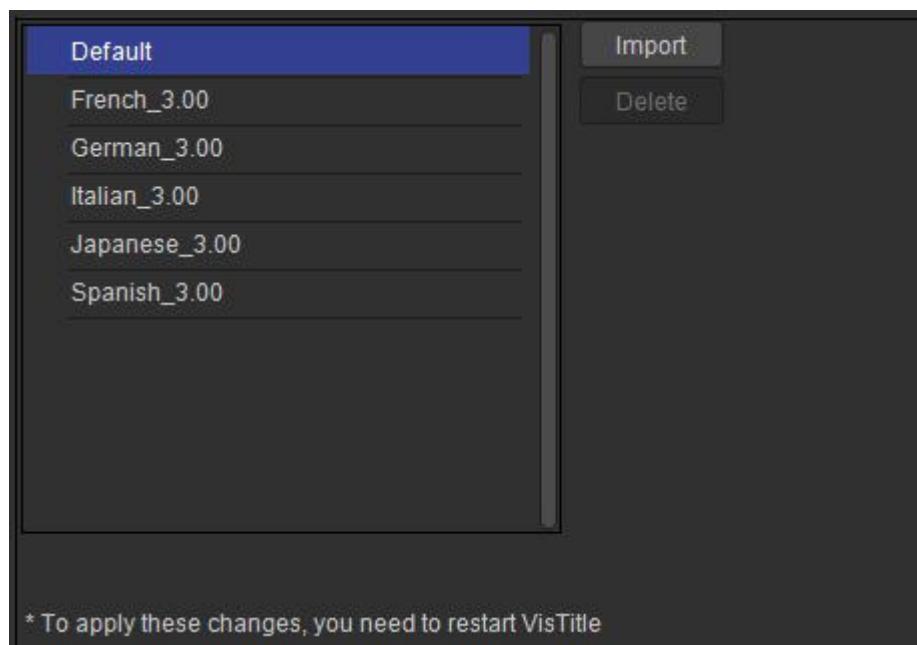

## 8.8. Keyboard Shortcut

File Command	HotKey
Global	
Start Project	Ctrl + Shift + N
New Document	Ctrl + N
Open Document	Ctrl + O
Save Document	Ctrl + S
Save Document Anim	Alt + S
Auto Save As Document	Ctrl + Shift + S
Auto Save As Document Anim	Alt + Shift + S
Save To NLE	Ctrl + Shift + E
Doc Settings	Ctrl + Shift + P
Undo	Ctrl + Z
Redo	Ctrl + Shift + Z
Library	F3
Edit View Only	F8

There are four major keyboard shortcut groups that apply to different areas: Global, Layout, Timeline and Edit Screen.

*Note: keyboard shortcuts may be edited in future editions of this software*

## 8.9. Language Setting

To change the VisTitle display language, you can select one language and click the OK button.

The right button are used to import language and delete selected language.

Note: if you want to import other display language, please connect with local dealer.

Note: to apply the language setting, you need to restart VisTitle.

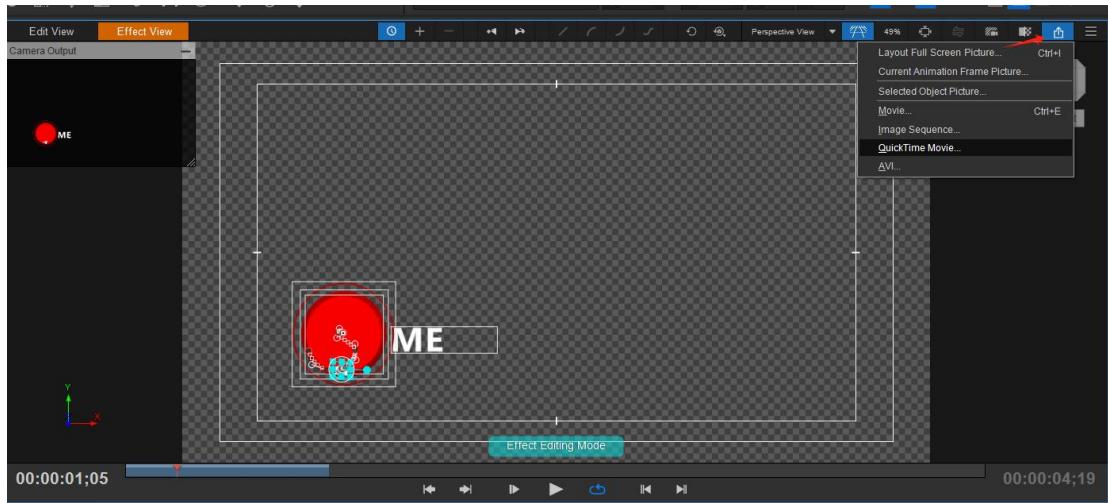

# Chapter Nine Layout Export

In practice, the layouts often need to be exported as certain formats, such as PNG sequence, animation, etc. Our software provides the following formats for the user to choose.

Click Export in Edit View (or Effect View) to select the output format, as shown in the figure below.

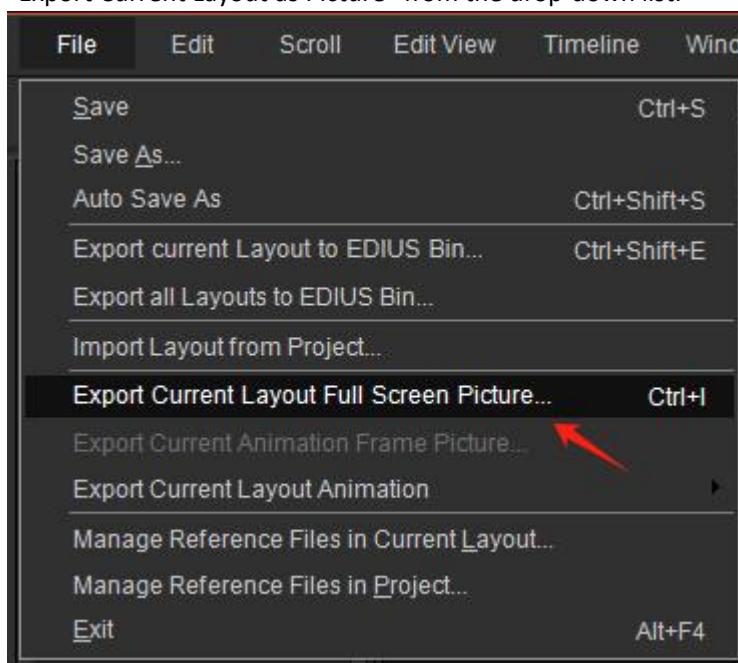

Click Export button in the Edit (or Effect) View to select the output format.

Note: In Edit View, "Output Current Animation Frame Picture" is disabled. This function is available in Effect View.

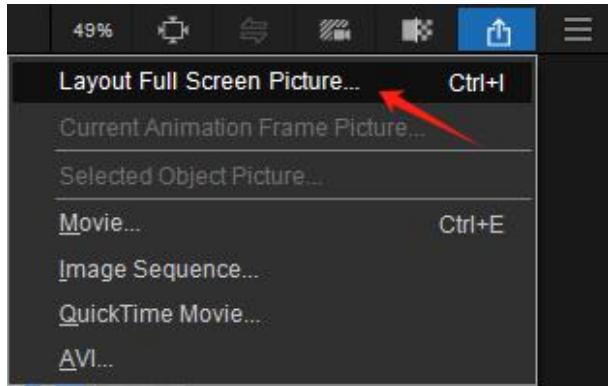

## 9.1. Export Current Layout as Picture

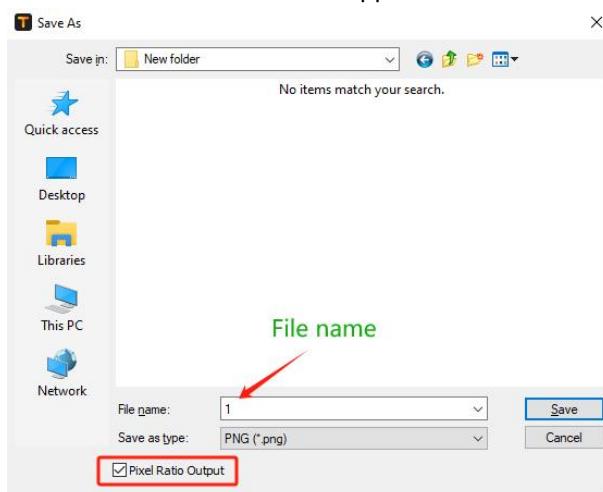

Method 1: press **Ctrl+I** or click on “File” in menu bar and “Export Layout” in tool bar, then select “Export Current Layout as Picture” from the drop-down list.

Method 2: Click Export button in the editing area and select "Layout Full Screen Picture..."

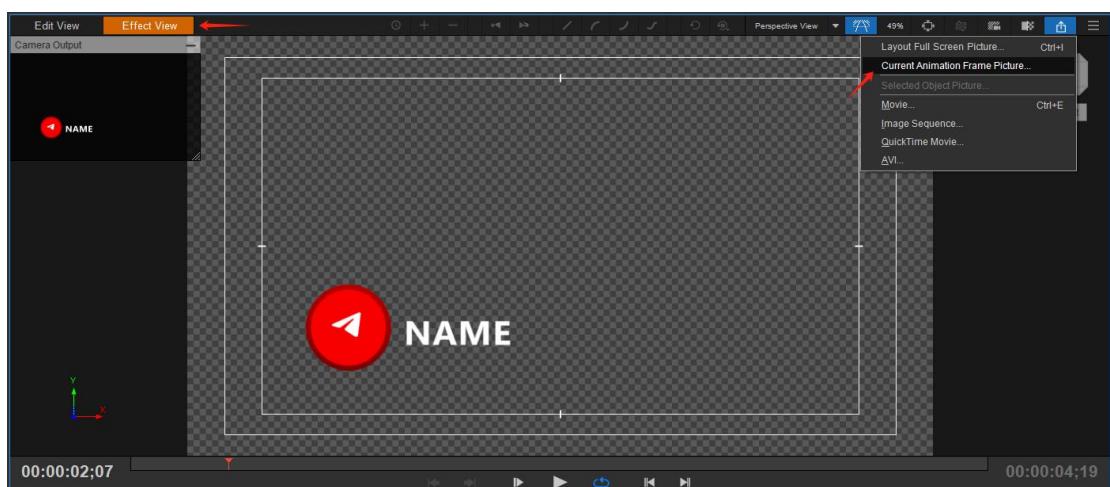

Then the Save as window will appear.

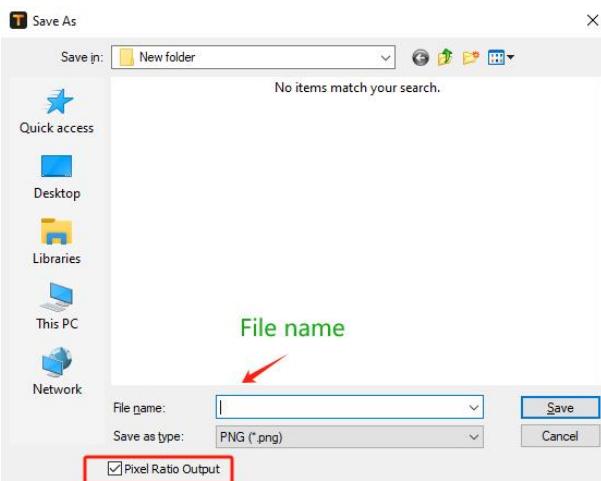

In the Save as window set path, enter file name and select file save type then click the "Save" button.

## 9.2. Export Current Frame as Picture

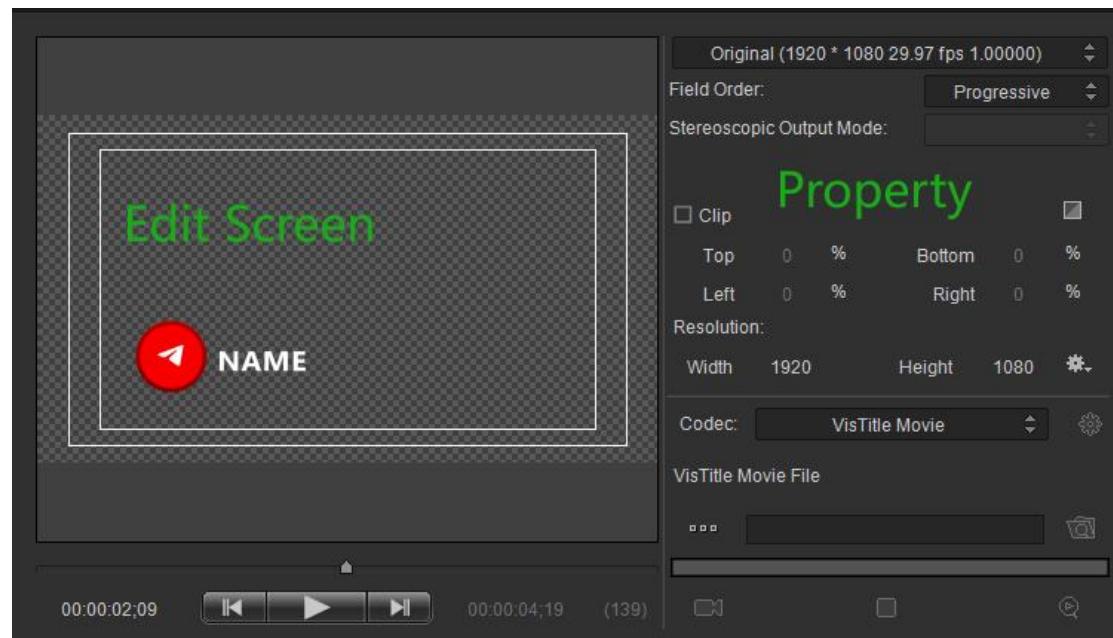

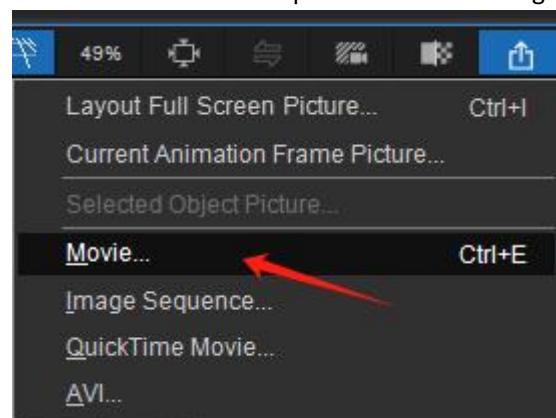

Click the Export button in effects editing area and select "Current Animation Frame Picture..."

In the Save as window set path, enter file name and select file save type then click the "Save" button.

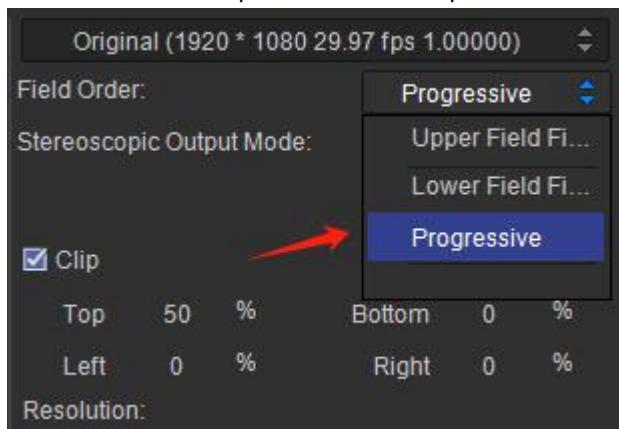

### 9.3. Export Current Layout as Movie

Press Ctrl+E or select "Export-Movie" in editing area.

### **Setting properties:**

**Field Order:** select option from the drop-down list.

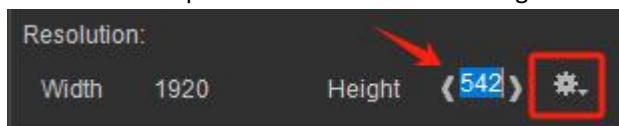

**Clip:** set parameters of Top, Bottom, Left and Right after enabling “Clip”.

### **Set parameters by:**

1. Clicking on the field and typing in the numbers
2. Dragging the cursor over the field
3. Moving cursor over the field then clicking on “<, >”

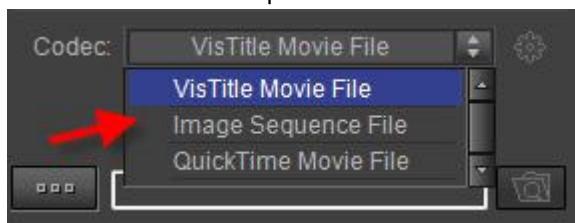

**Resolution:** set parameters of Width and Height.

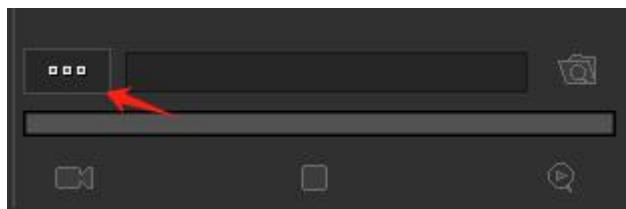

You can also click the marked button shown above then select option from the drop-down list.

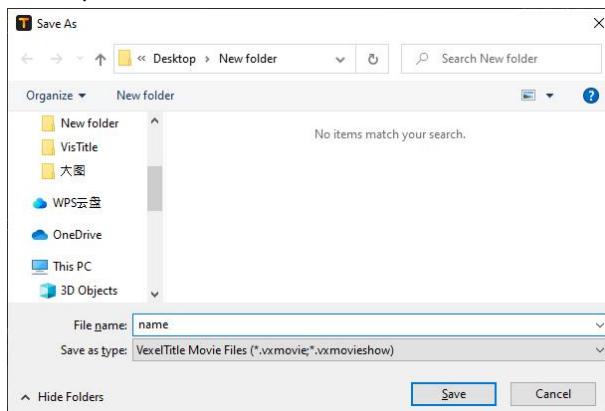

**Codec:** click on the dropdownbutton and then select option from the drop-down list.

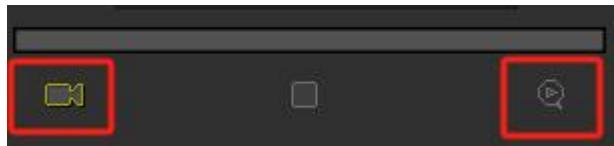

**File Path:** click the “Browse” button, the Save as window will appear.

Select path, enter file name then click on the “Save” button in the Save as window.

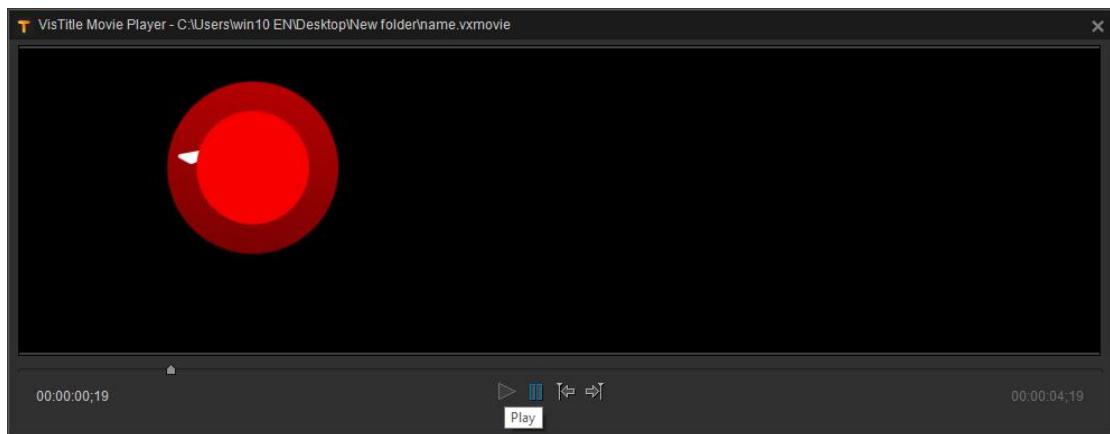

**Render and Preview:** click the “Render” button to render. After rendering, click on the “Preview” button to preview the movie file.

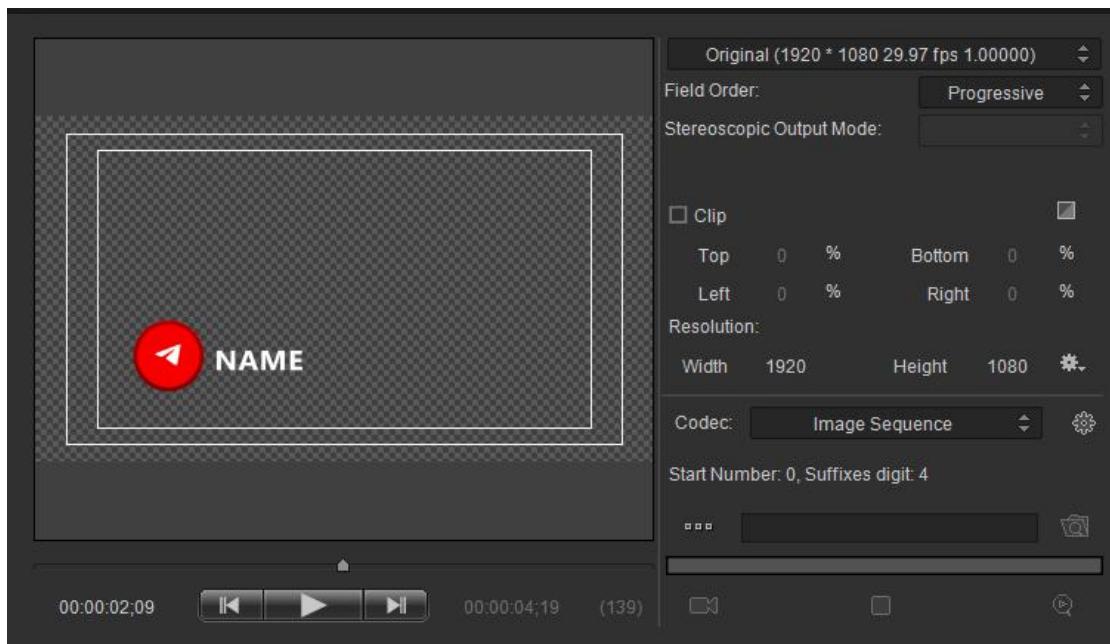

The left button is “Render” and the right is “Preview”.

Preview:

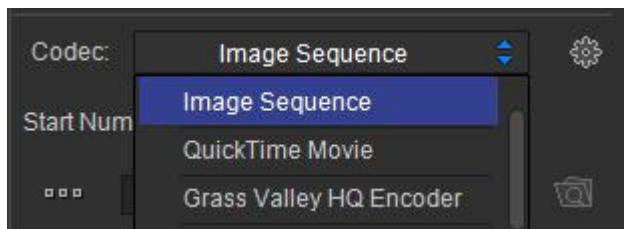

## 9.4. Export Current Layout as Image Sequence

Click on “File” in menu bar and “Export Layout” in tool bar, then select “Export Current Layout as Image Sequence” from the drop-down list. The Export Movie window will appear.

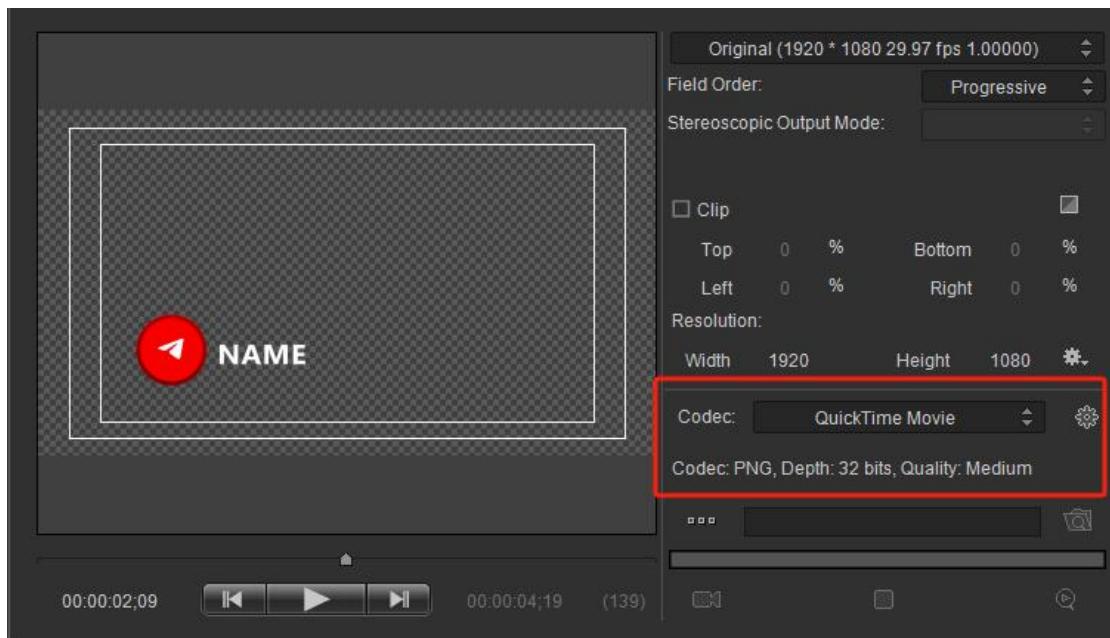

Click on the marked dropdownbutton shown above and then select option from the drop-down list.

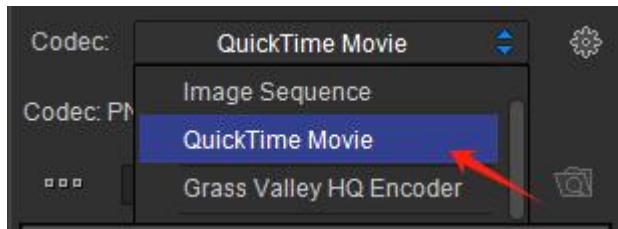

Please refer to **Export Current Layout as Movie** about operation.

## 9.5. Export Current Layout as QuickTime Movie

Click on “File” in menu bar and “Export Layout” in tool bar, then select “Export Current Layout as Quicktime Movie” from the drop-down list. The Export Movie window will appear.

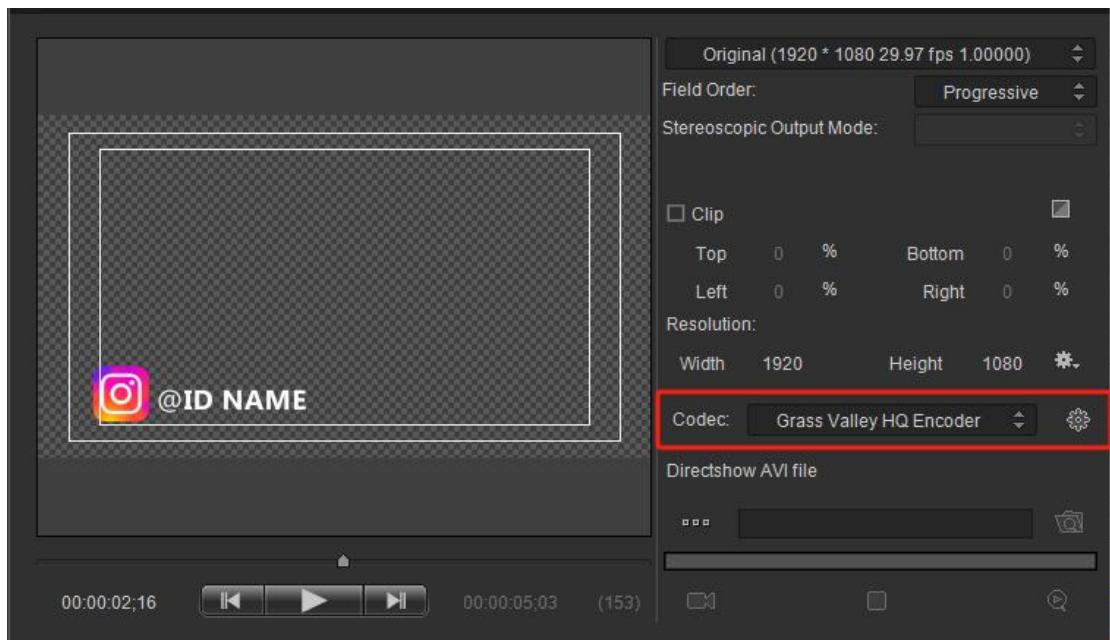

Click on the marked dropdownbutton shown above and then select option from the drop-down list.

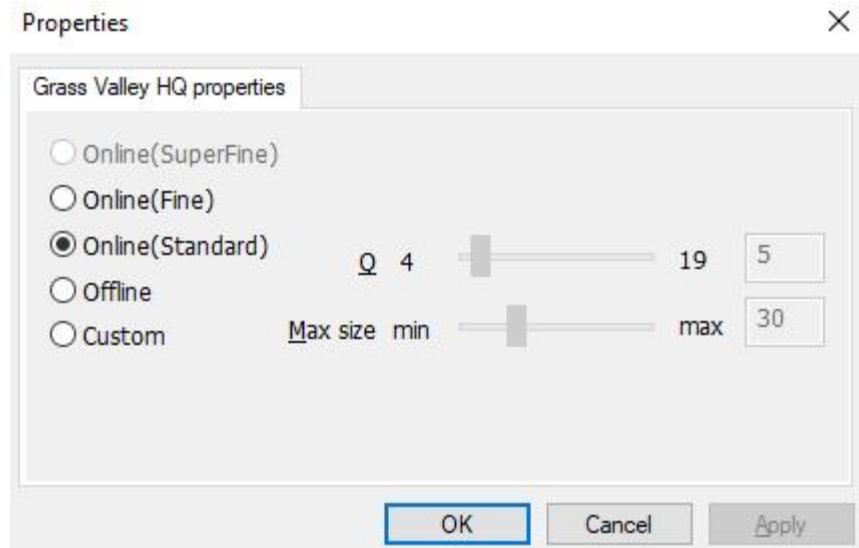

Please refer to **Export Current Layout as Movie** about operation.

## 9.6. Export Layout to AVI Animation

Click Export button under the File menu, select "Export current layout to AVI animation" from the drop-down list. The animation export window is as shown below:

Click Settings button on the right side of Codec option, the following window pops up.

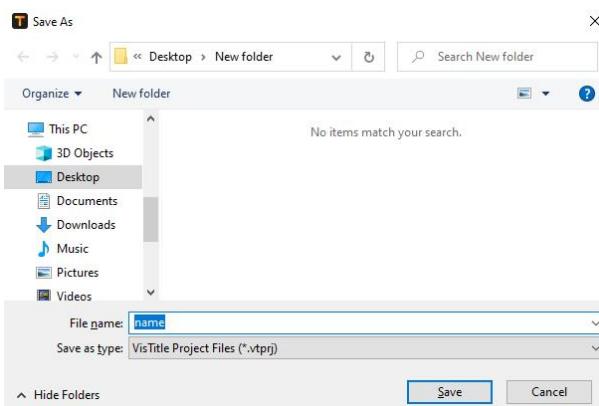

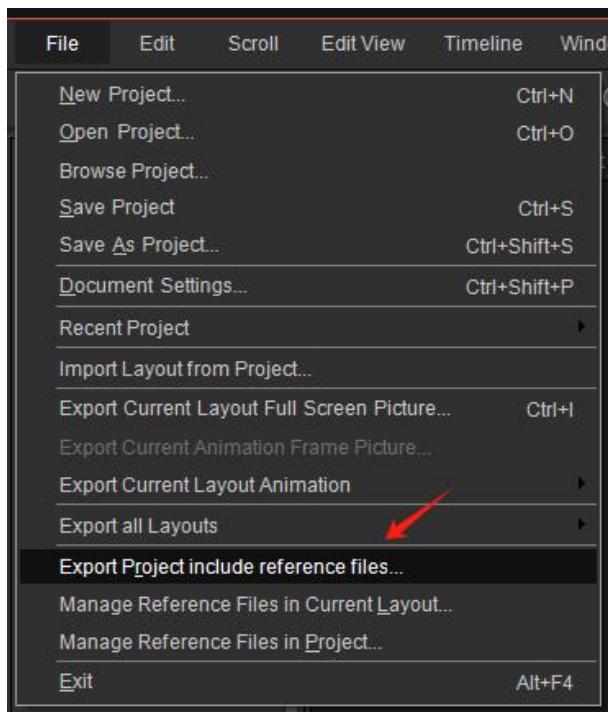

For specific setting methods of export layout to AVI animation, please refer to "Export Current Layout to Animation" chapter.

## 9.7. Export Project include reference files

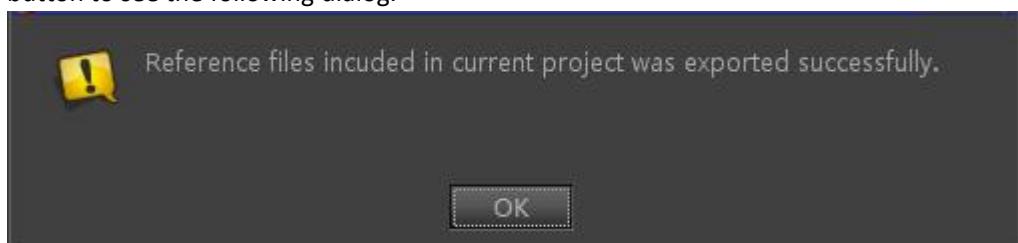

Export the current layout and reference files contained in the layout, such as pictures, animation files, and etc.

Click on "File" in menu bar, then select "Export Project include reference files" from the drop-down list. The Save as window will appear.

Note: This function requires starting VisTitle software from desktop as standalone. It's not available in VisTitle which is opened from EDIUS.

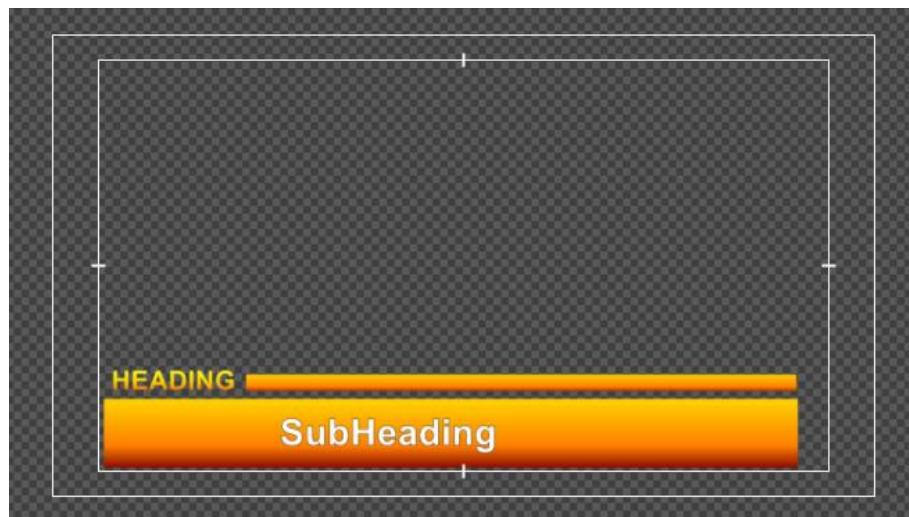

In the Save as window set path, enter file name and select file save type then click the "Save" button to see the following dialog.

Click the "OK" button, you can open the path and the following will appear.

# Chapter Ten Examples

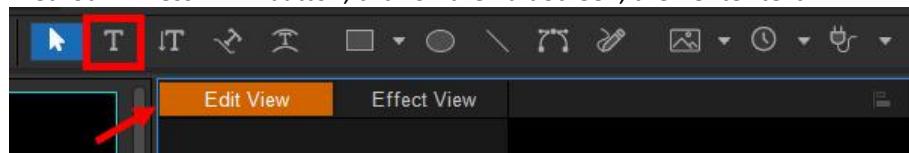

## 10.1. Create Title

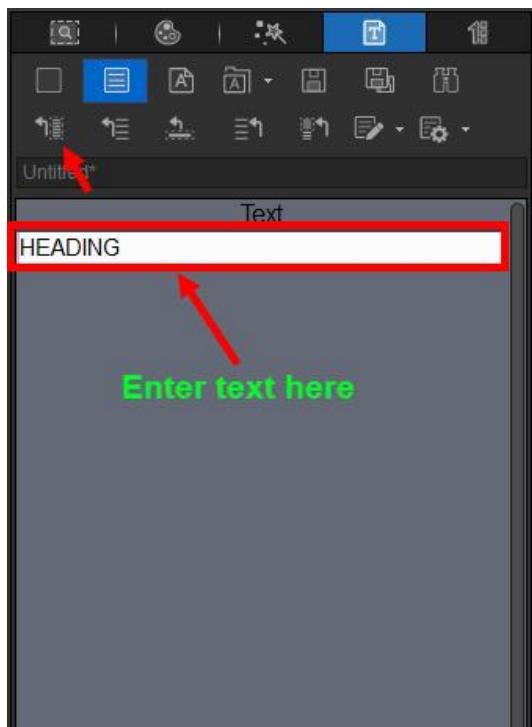

### 10.1.1. Text

- 1) Enter the text "Heading" font size 32, and "SubHeading" font size 29.

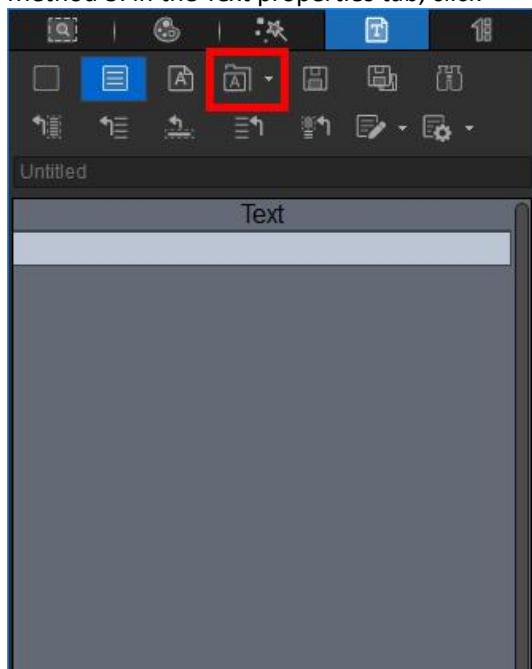

Method 1: Press button, click on the Edit Screen, then enter text.

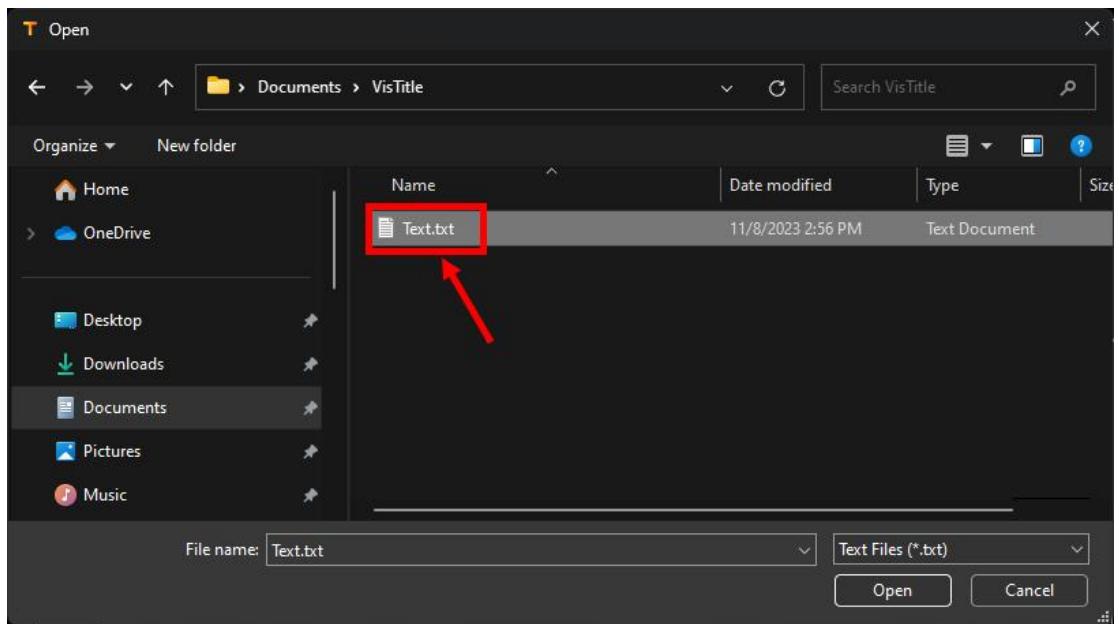

Method 2: in the Text properties tab, click on button

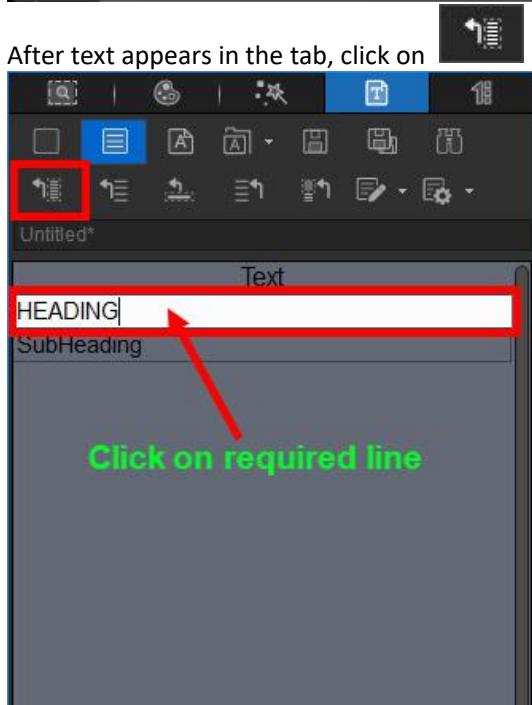

Method 3: in the Text properties tab, click  button

Open saved file

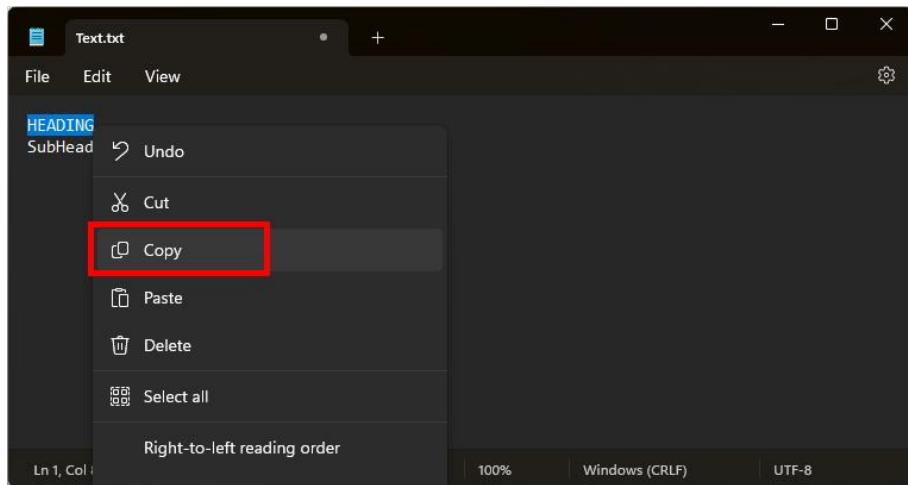

After text appears in the tab, click on button

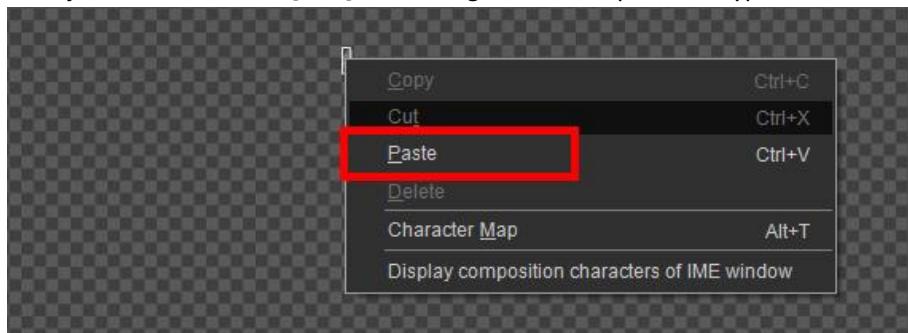

Method 4: use System paste

Copy text from desired location

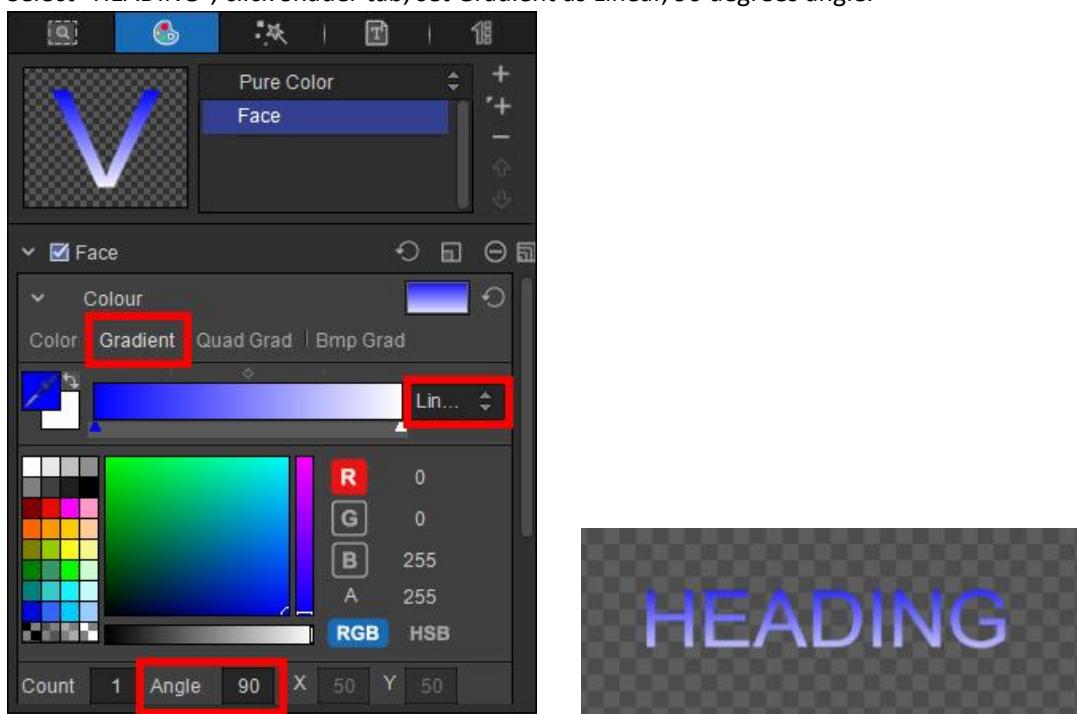

In Object Menu Bar click [Text] button, right-click and paste, or type Ctrl+Shift+V to paste.

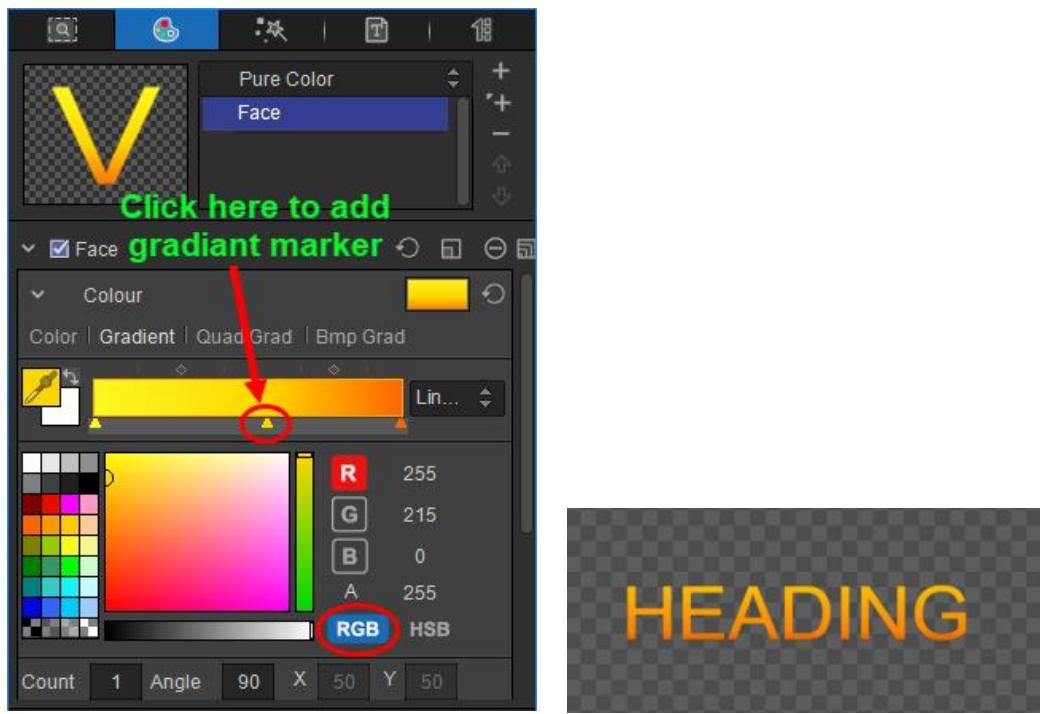

## 2) Color

Method 1: edit color in the Shader tab

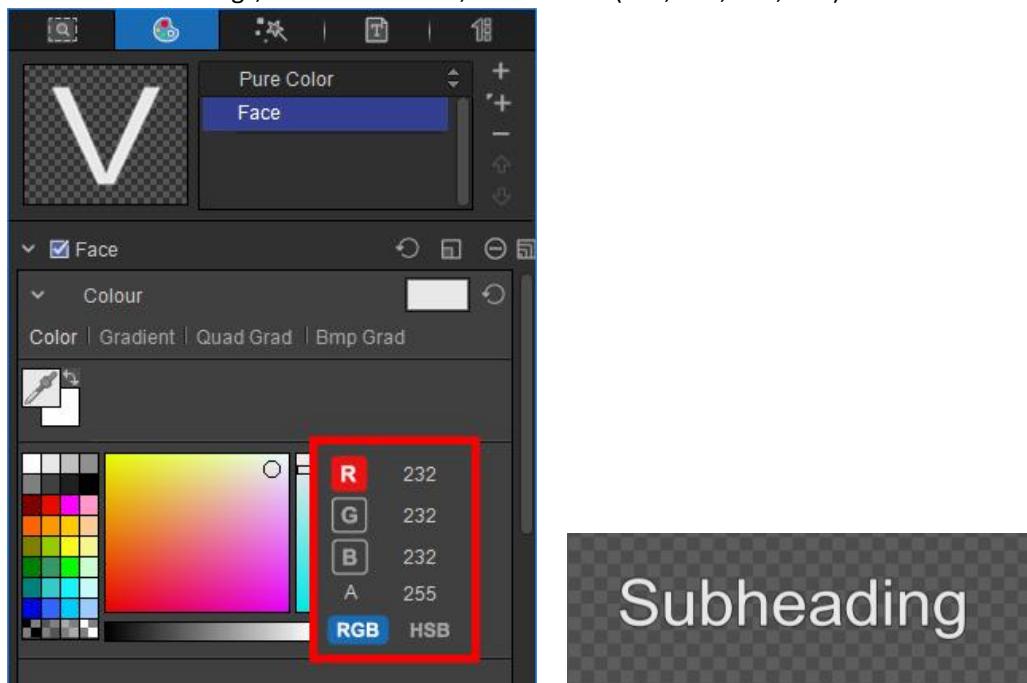

Select "HEADING", click Shader tab, set Gradient as Linear, 90 degrees angle.

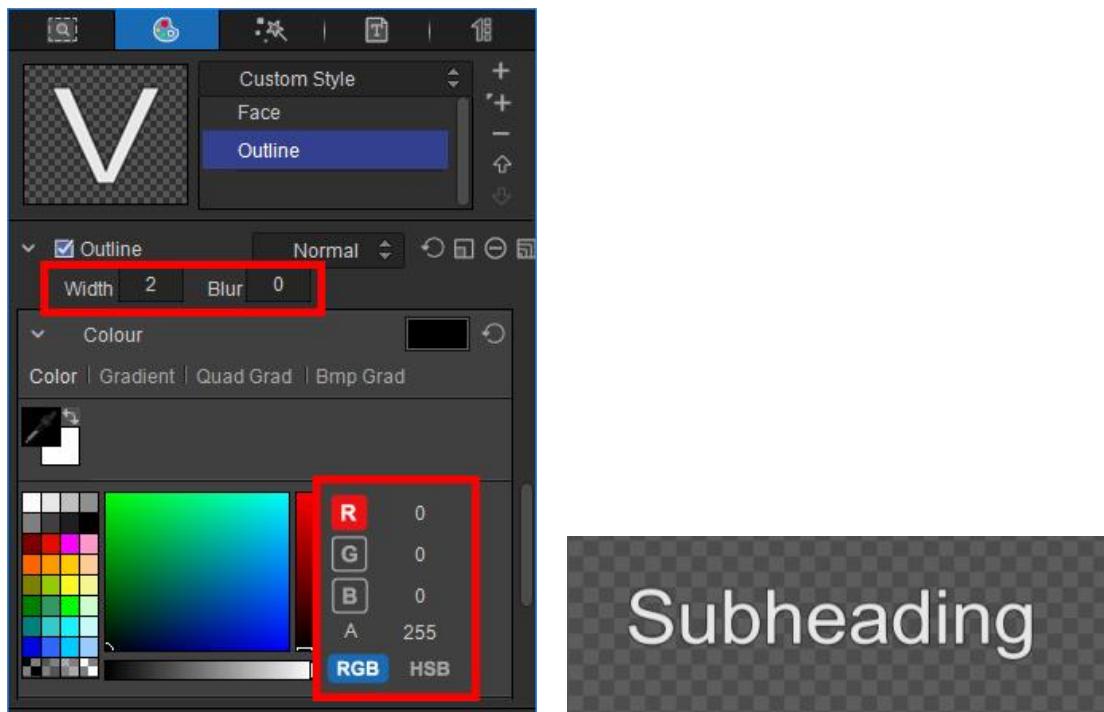

Add a Gradient point, choose RGB style, and set gradient points to (255, 215, 0, 255), (255, 128, 0, 255), (130, 0, 0, 255)

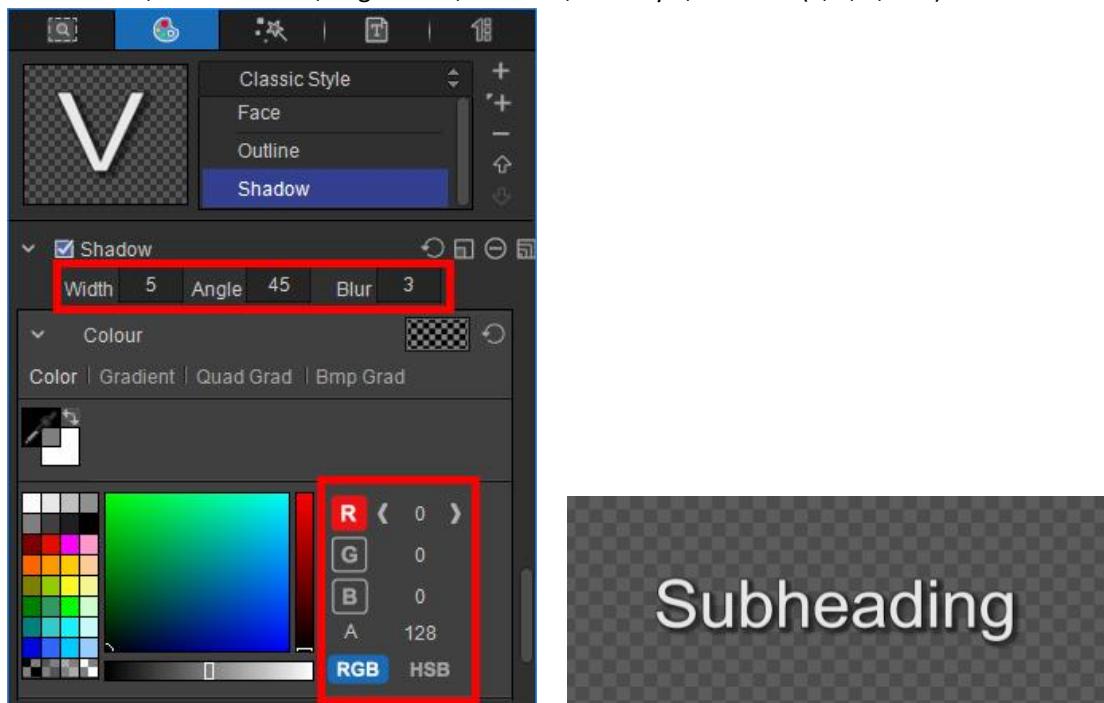

Choose "SubHeading", enter Shader tab, set RGBA to (232, 232, 232, 255)

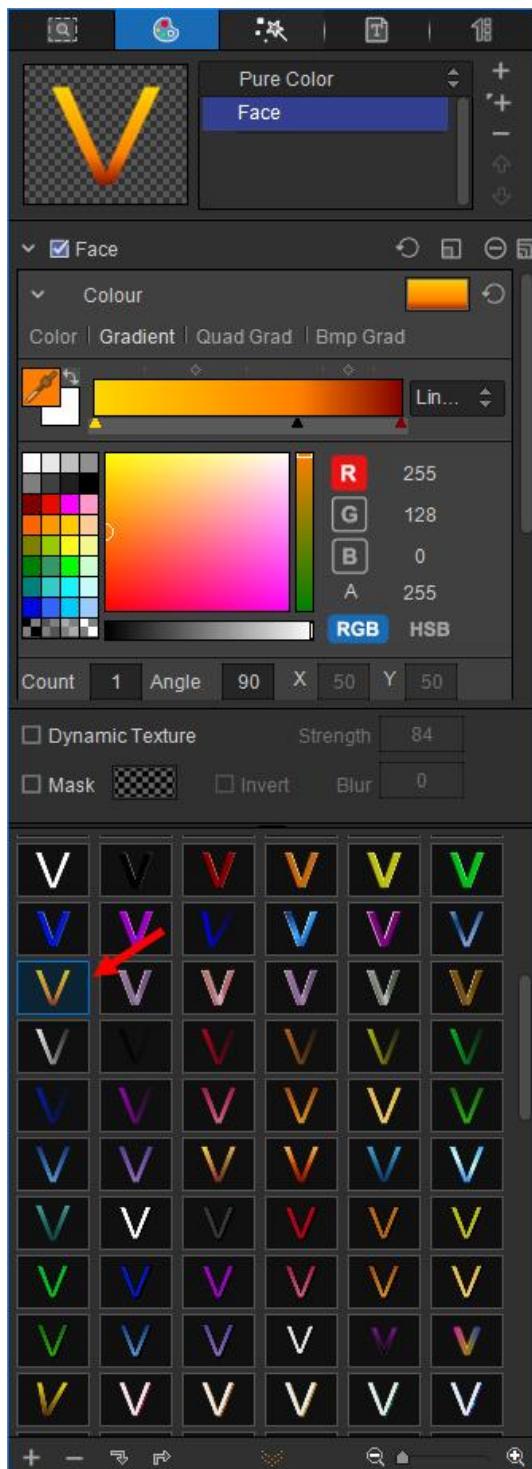

Click on , add Edge, set width to 2, set blur to 0, RGB style, RGBA to (0, 0, 0, 255)

Add Shadow, set width to 5, angle to 45, blur to 3, RGB style, RGBA to (0, 0, 0, 128)

Method 2: Double-click on the text and select shader from library.

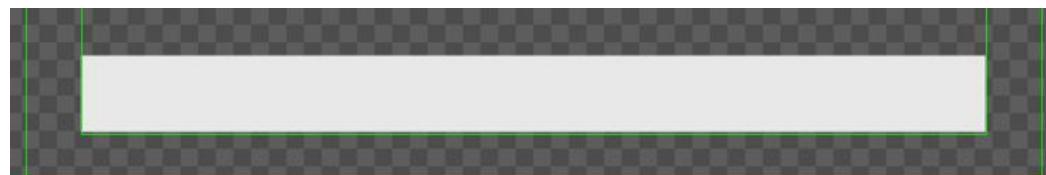

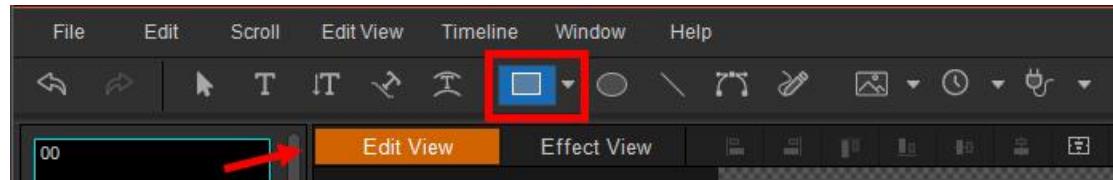

Method 3: Open Shader Template Library, open Single Color catalogue, choose shader 020.

## 10.1.2. Liner

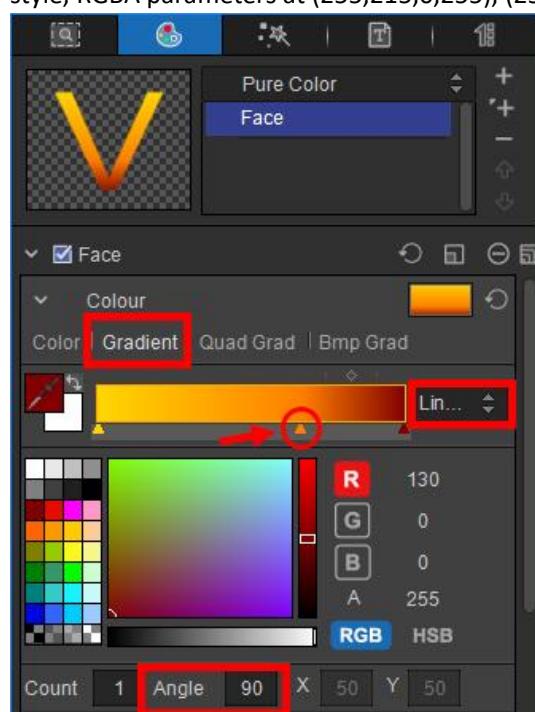

### 1) Create liner

Create a rectangle on the Edit Screen

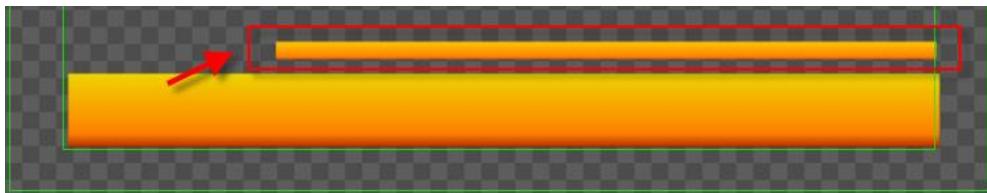

### 2) Set shader

Select object, in tab choose Gradient-Linear, angle 90, add a Gradient Point, RGB style, RGBA parameters at (255,215,0,255), (255,128, 0,255), (130,0,0, 255)

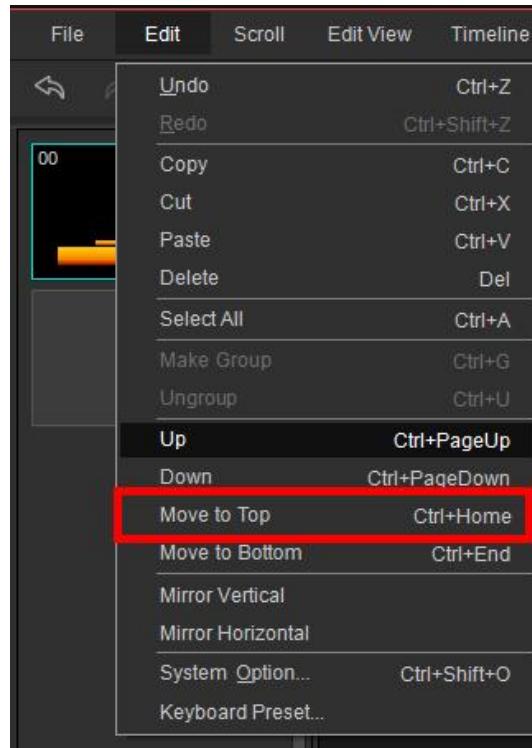

Use the same method to create another rectangle

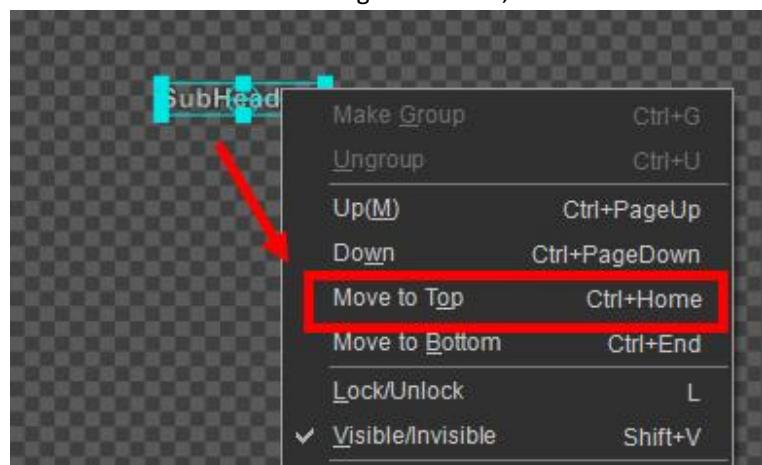

### 3) Set text and object level

As the text was created before the object, the object will cover the text.

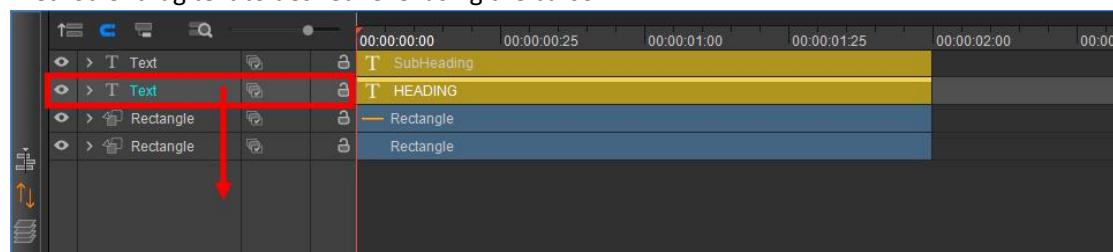

Method 1: Select text, in Edit Menu Bar choose Move to Top, or type Ctrl+Home.

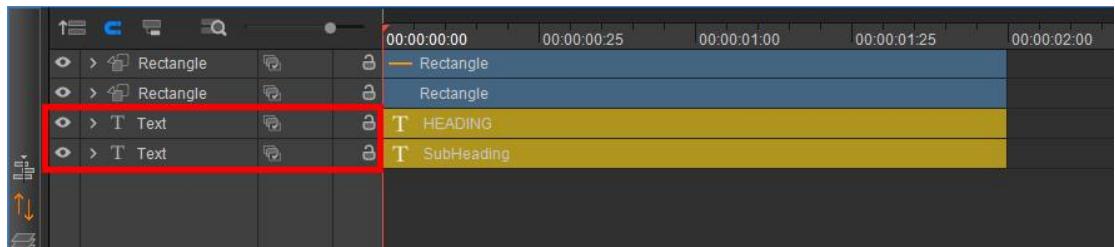

Method 2: in the Edit Screen right-click text, from context menu choose Move to Top

Method 3: drag text to desired level using the cursor.

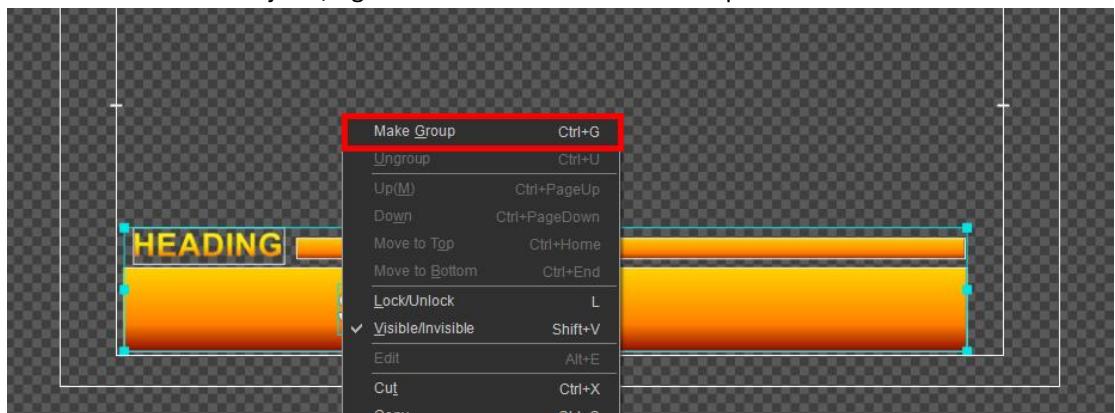

### 10.1.3. Make Group

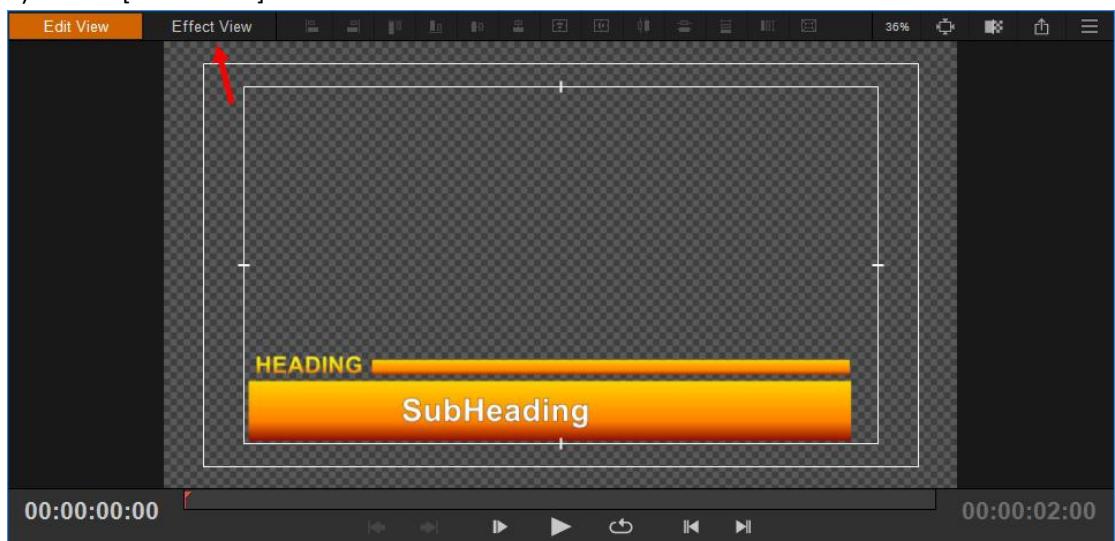

Method 1: select all objects in Edit Scree, type Ctrl+G

Method 2: Select all objects, right-click then choose Make Group from context menu

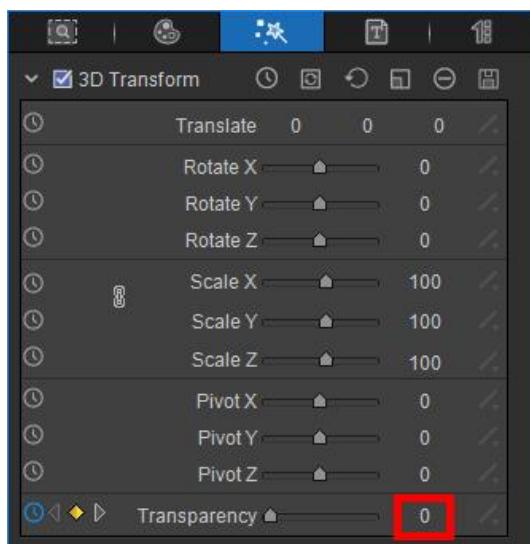

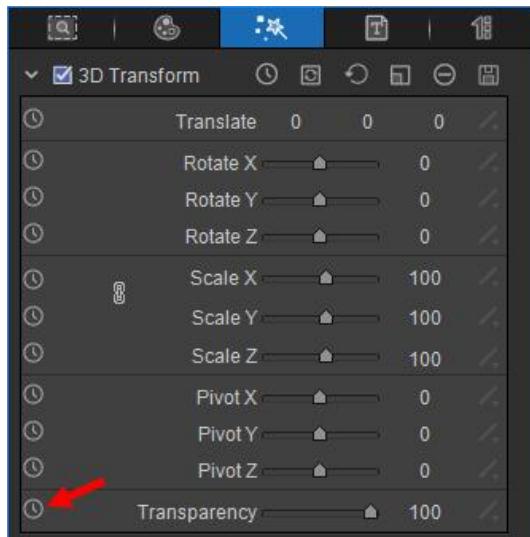

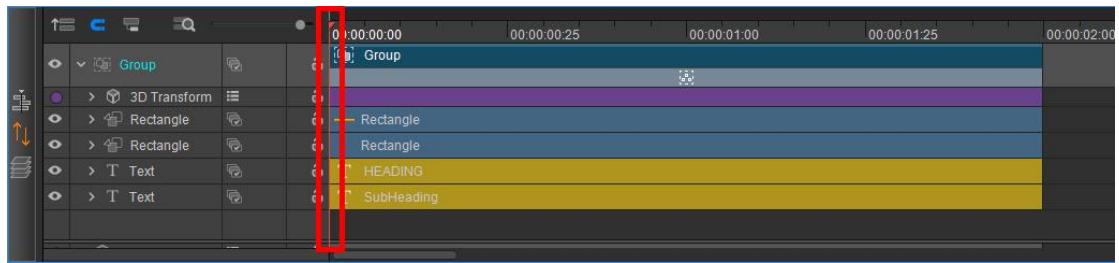

### 10.1.4. Fade In/Out Animation

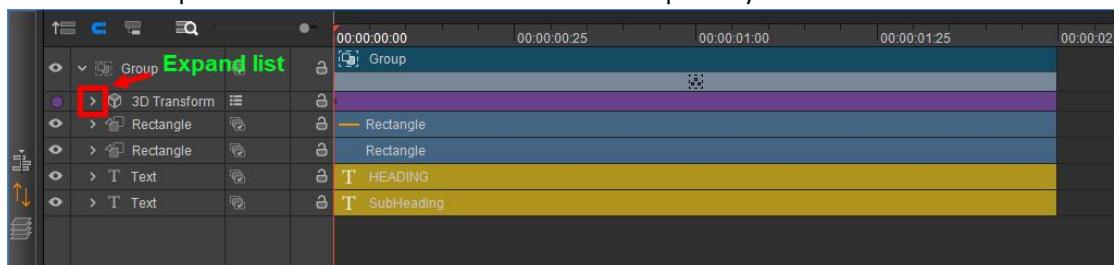

- 1) Click [Effect View] to activate 3D editor.

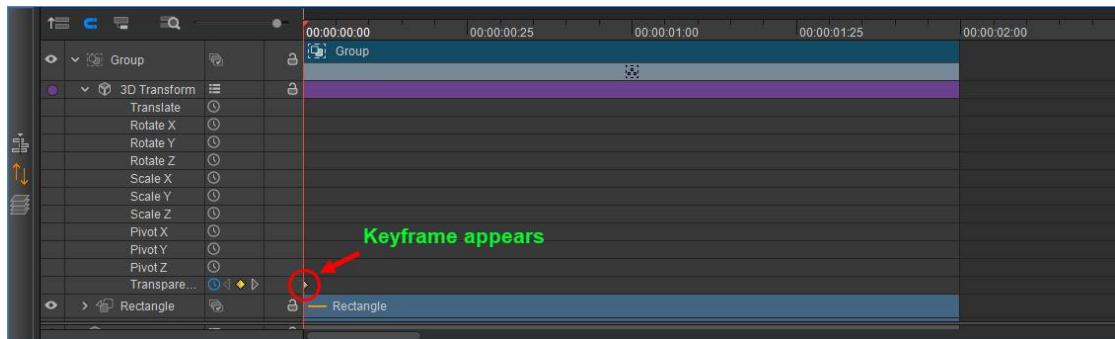

- 2) Click  to open Effect tab, activate Transparency Keyframe, set transparency to 0, open group in Timeline.

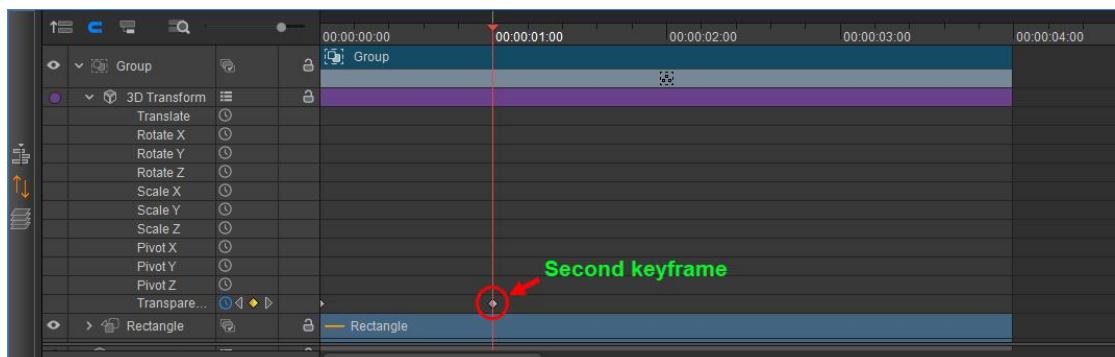

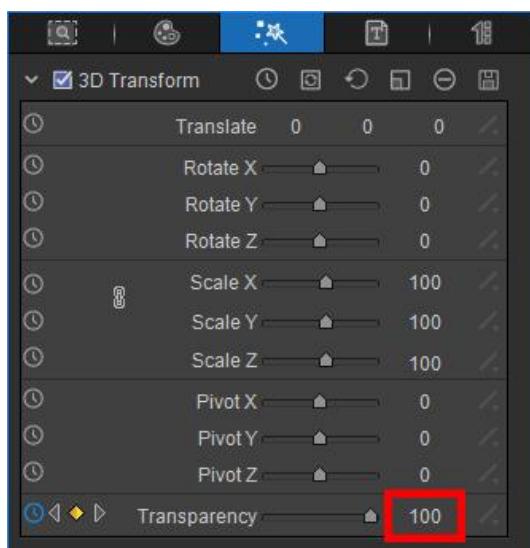

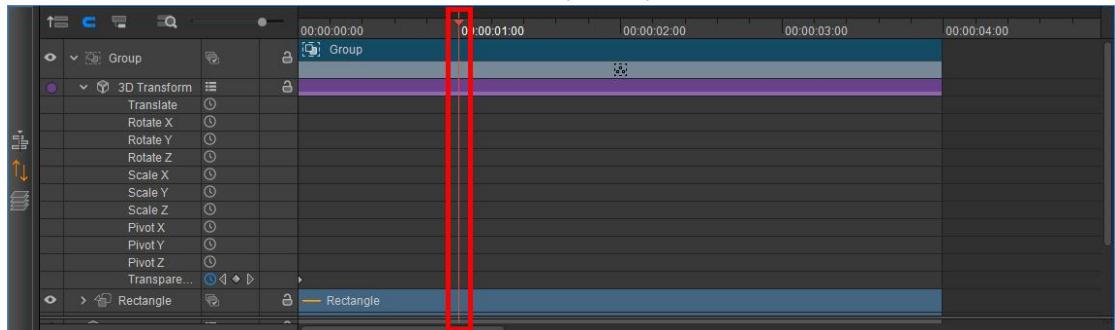

Double-click expand 3DTransform track and choose "Transparency".

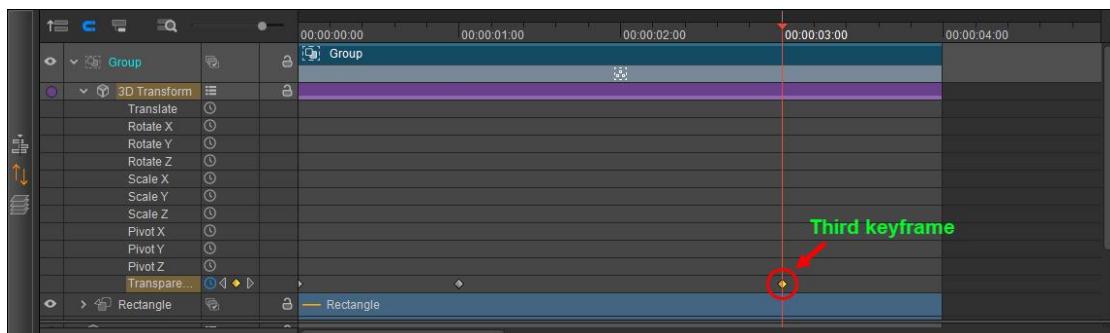

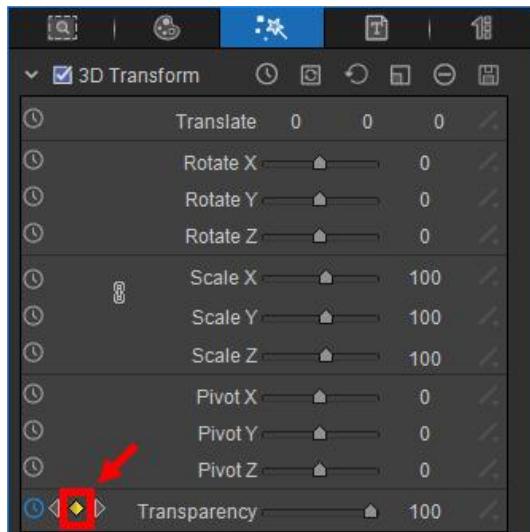

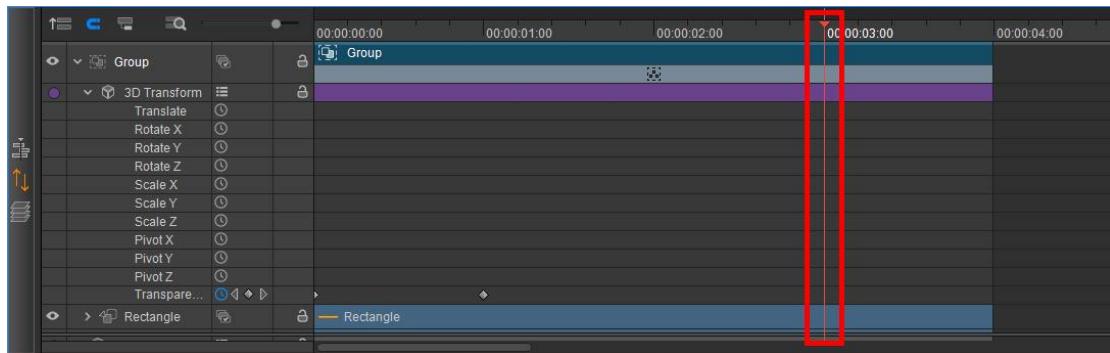

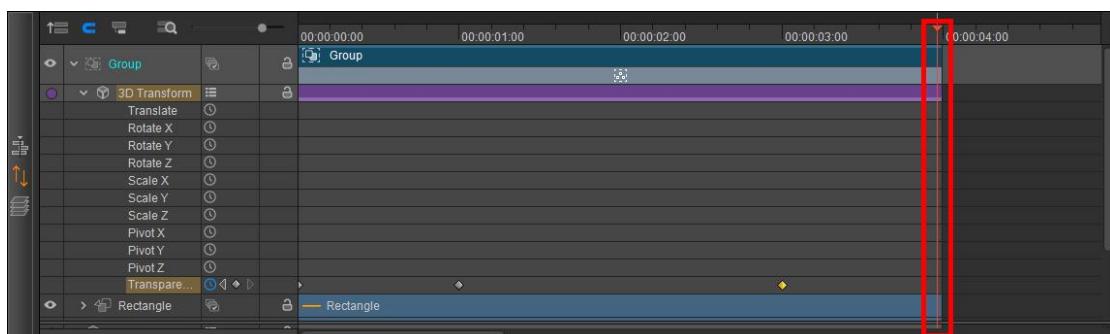

- 3) Move Timeline marker to 1 second, set Transparency to 100.

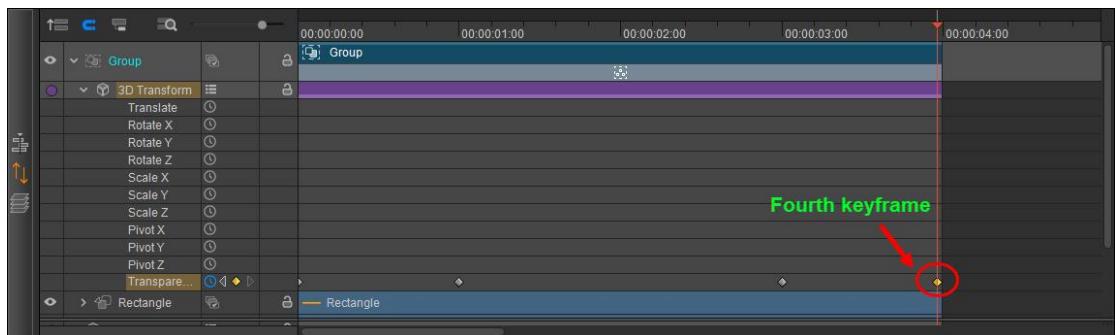

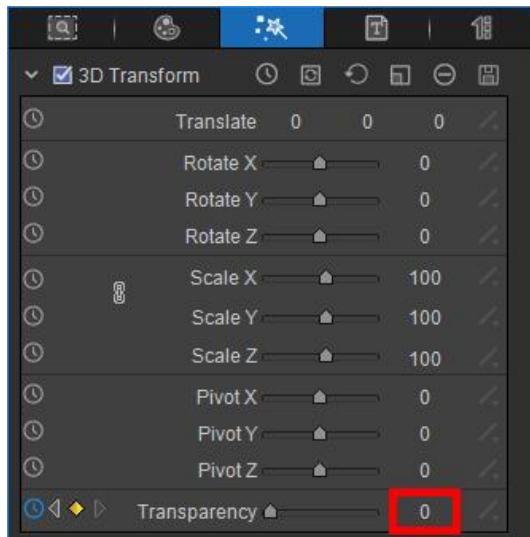

- 4) Move Timeline marker to 3 seconds, then click Add/Delete Keyframe ◊.

5) Move Timeline marker to Choice End

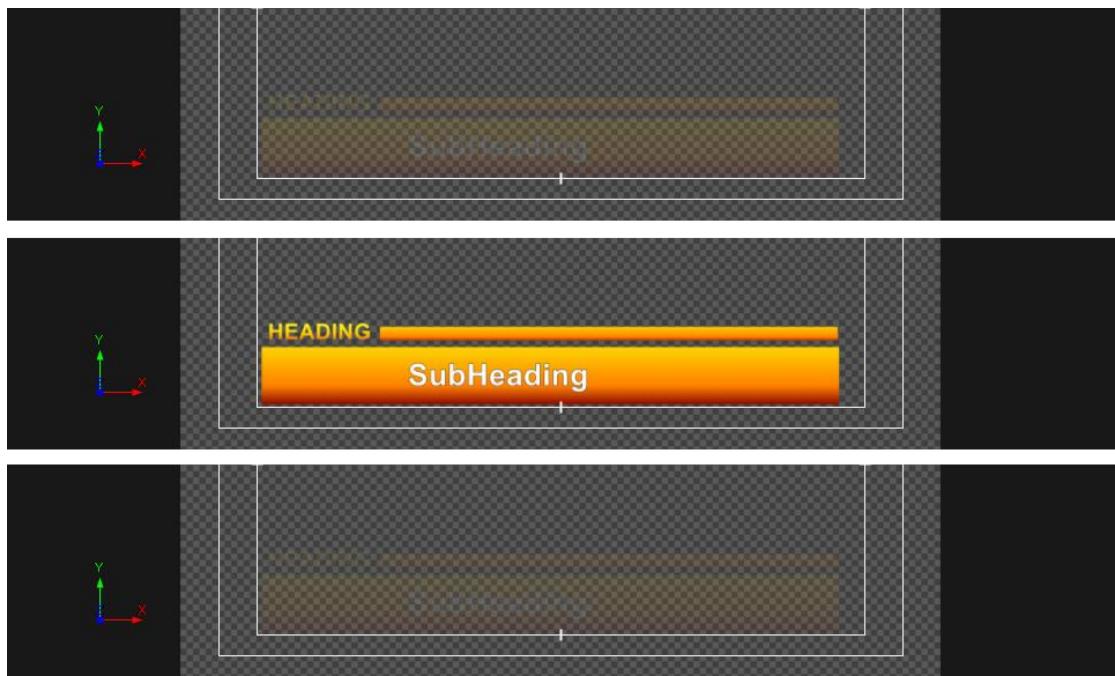

Set Transparency value to 0.

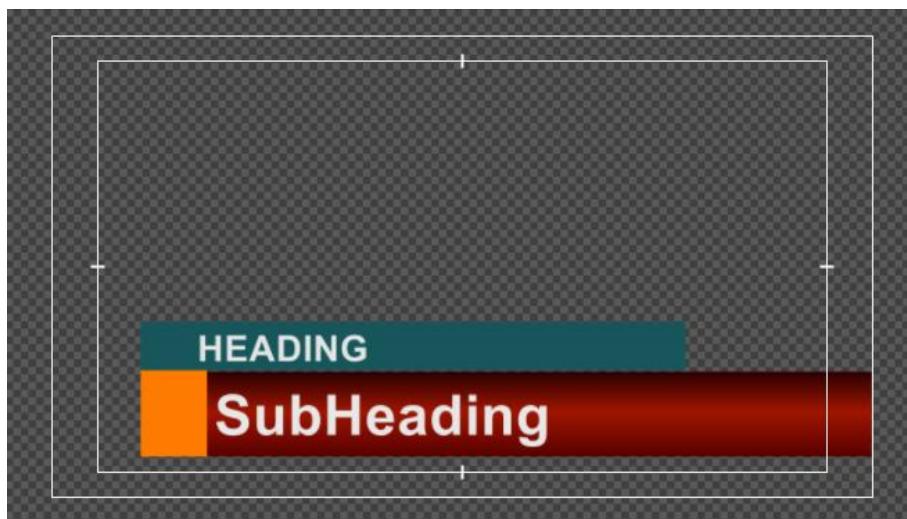

6) Press button to see Fade In/Out effects.

### 10.1.5. Preview

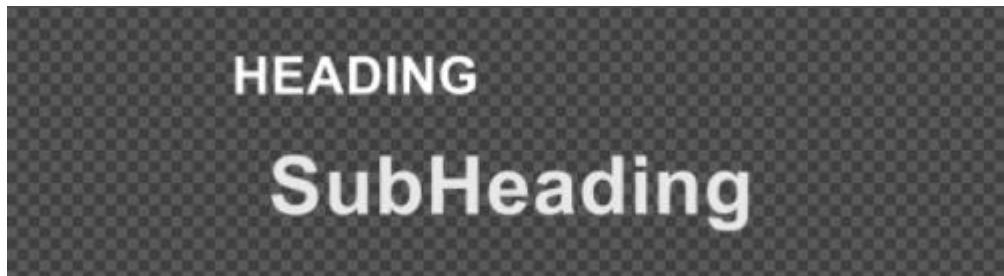

## 10.2. Create Effect Title

### 10.2.1. Text

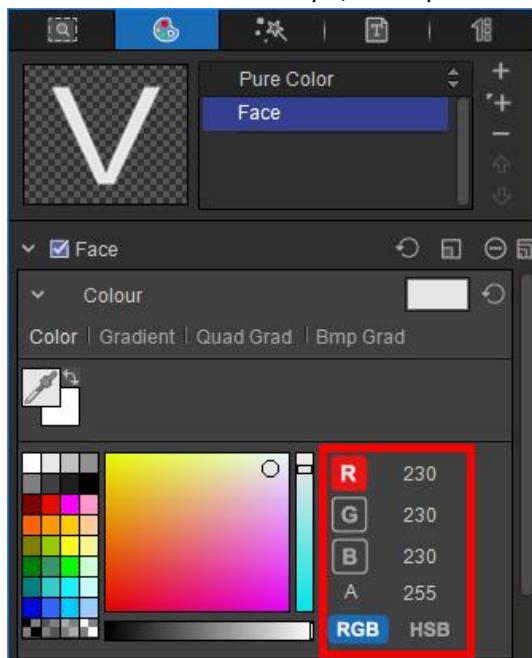

#### 1) Enter Text

Click , enter "HEADING" font size 20, and "Subheading" font size 37.

## 2) Shader

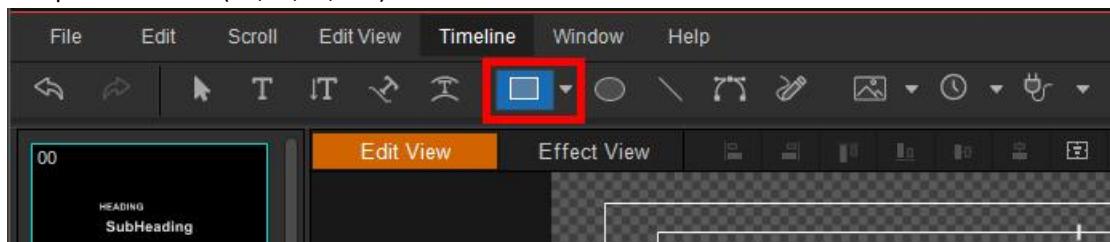

In Shader tab set to RGB style, RGBA parameters at (230,230,230,255)

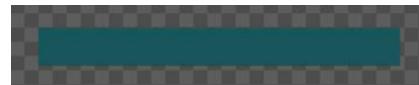

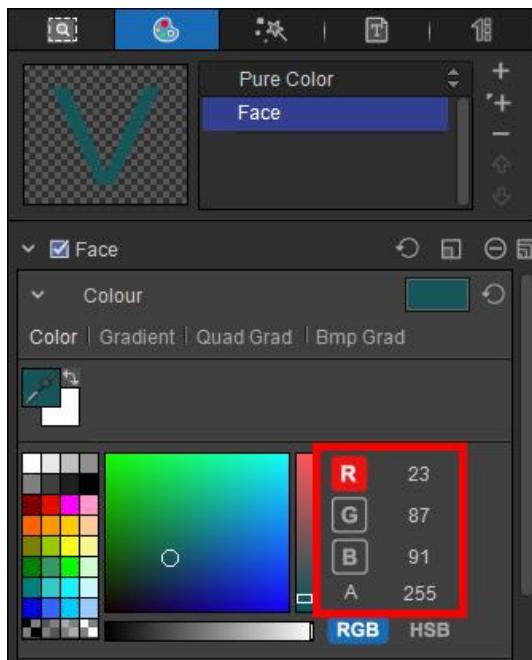

## 10.2.2. Liner

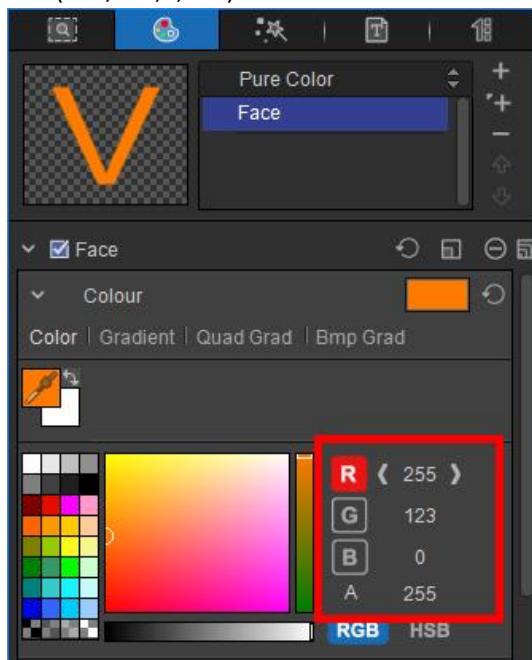

### 1) Create liner and shader

1. Green Rectangle: in Edit Screen create rectangle, open Shader tab, set to RGB, RGBA parameters to (23,87,91,255)

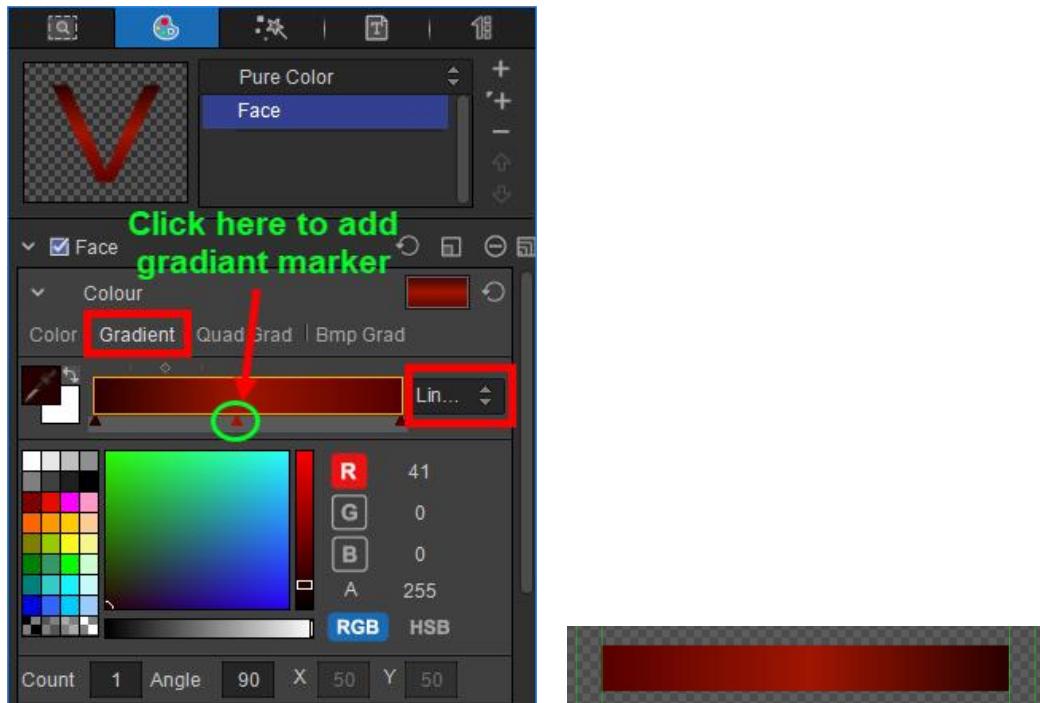

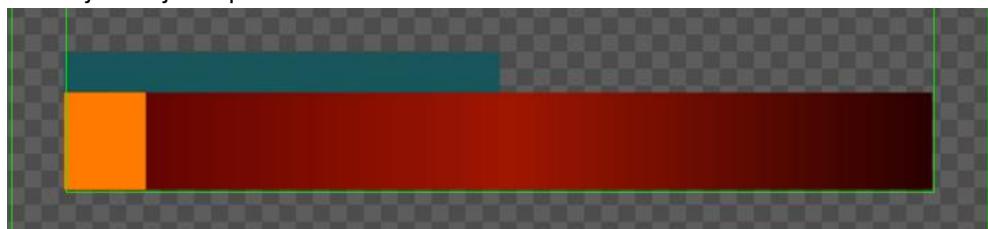

2. Orange Rectangle: create rectangle, open Shader tab, set to RGB, RGBA parameters to (255,123,0,255)

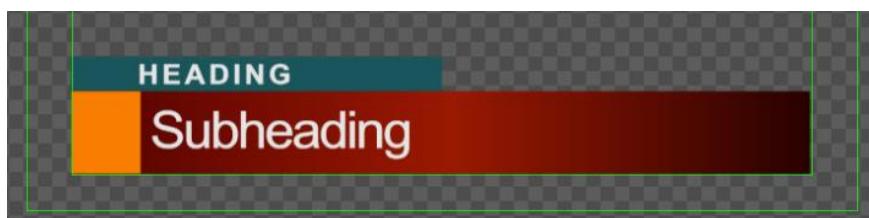

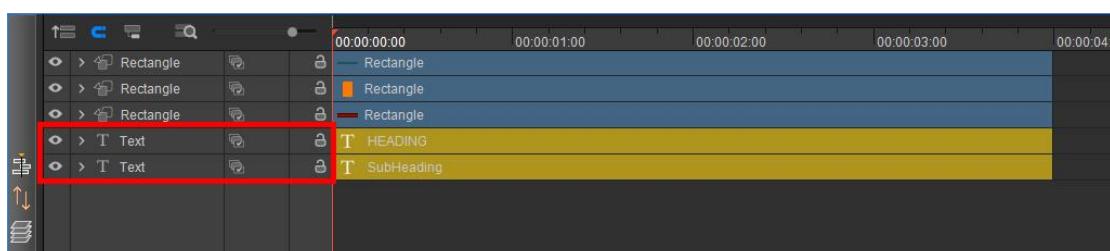

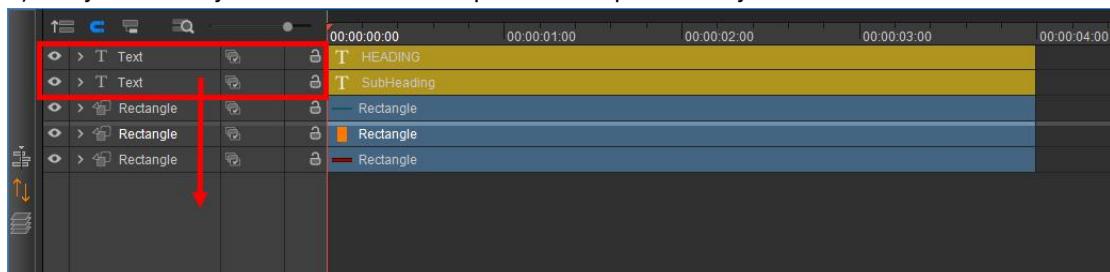

3. Red Gradient Rectangle: copy-paste orange rectangle, extend length, open shader tab, set Gradient to Linear, add a Gradient Point, set to RGB, RGBA parameters to (41,0,0,255),(160,22,1,255) (85,0,0,255)

4. Adjust objects' position and size

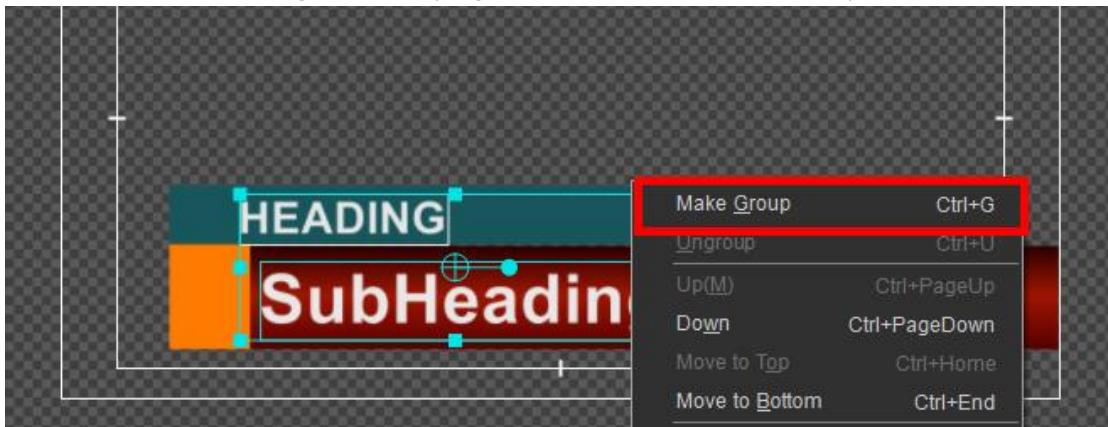

2) Adjust text-object levels so all text is placed on top of the objects.

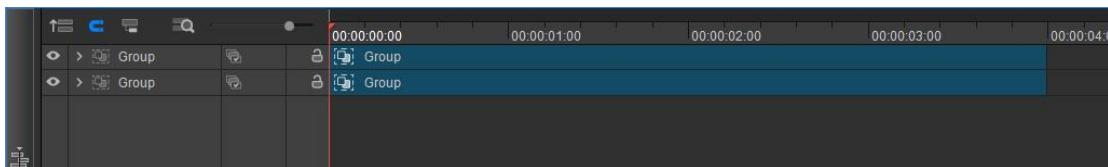

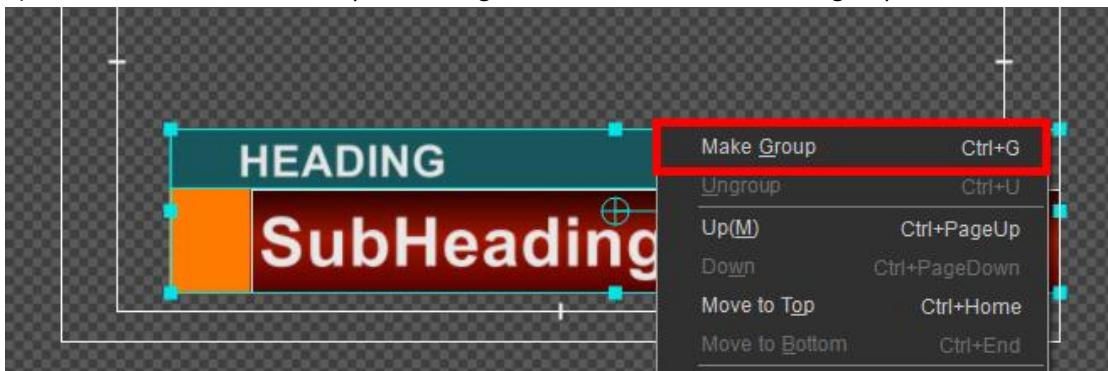

### 10.2.3. Make Group

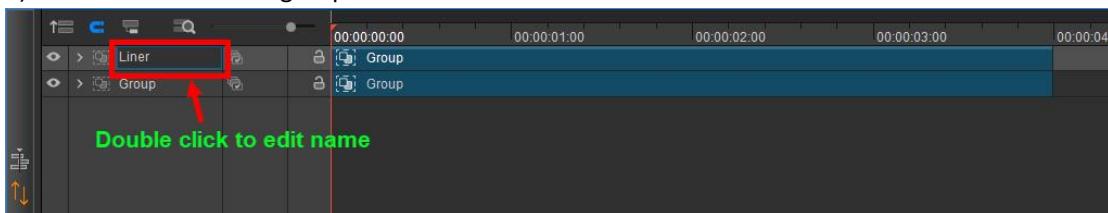

- 1) Select both texts using the Ctrl key, right-click and choose "Make Group" from context menu.

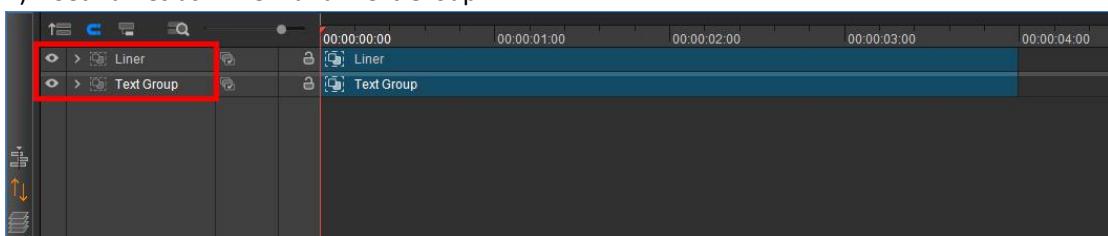

- 2) Use same method to Group all rectangles. The Timeline now has two groups.

- 3) Double-click to edit group names

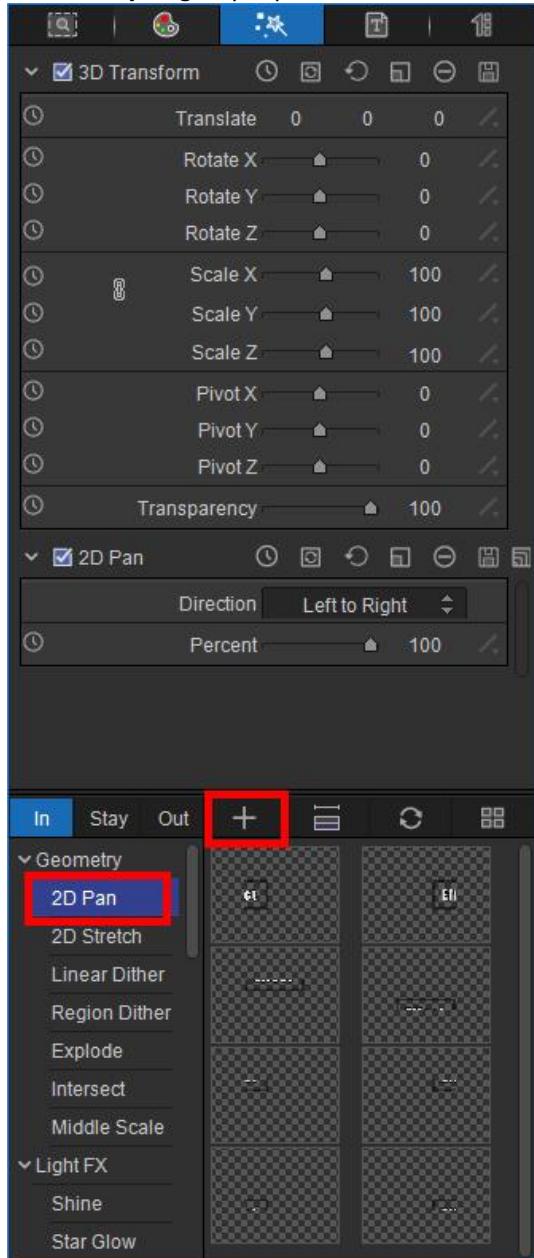

- 4) Set names as "Liner" and "Text Group"

## 10.2.4. Create Effect Animation

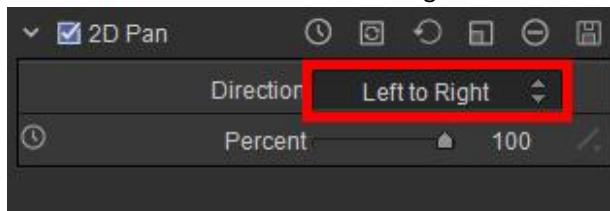

### 1) Add Effect

Click on object group, open Effect tab, choose 2D Pan, then click on 

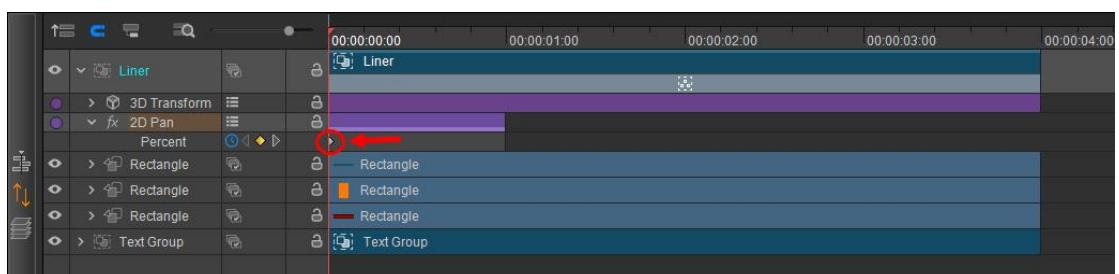

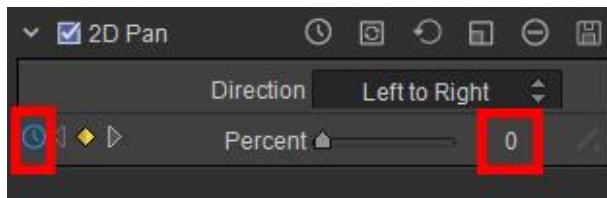

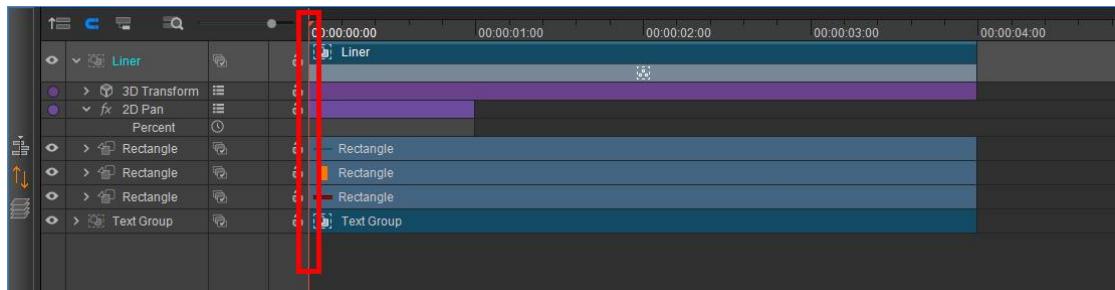

### 2) Set Keyframe

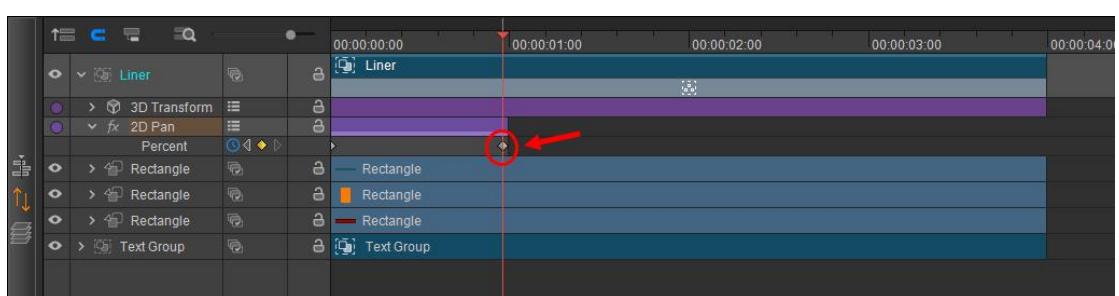

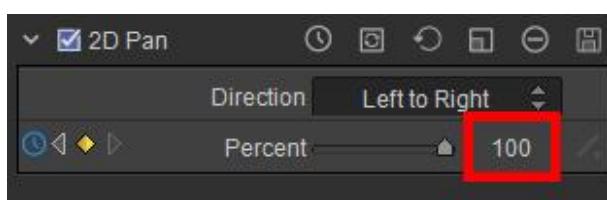

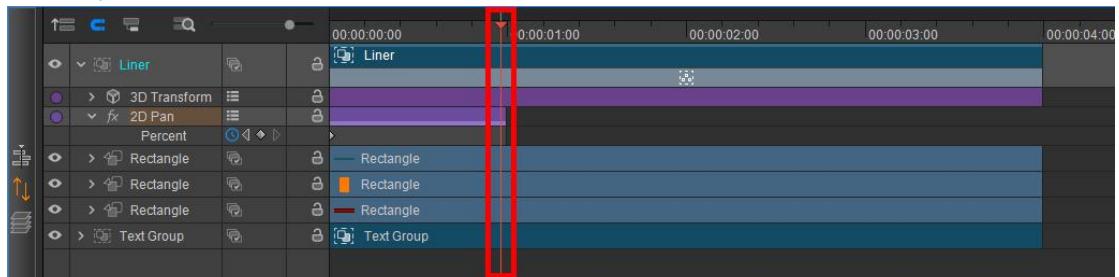

#### 1. Set 2D Pan direction as Left to Right

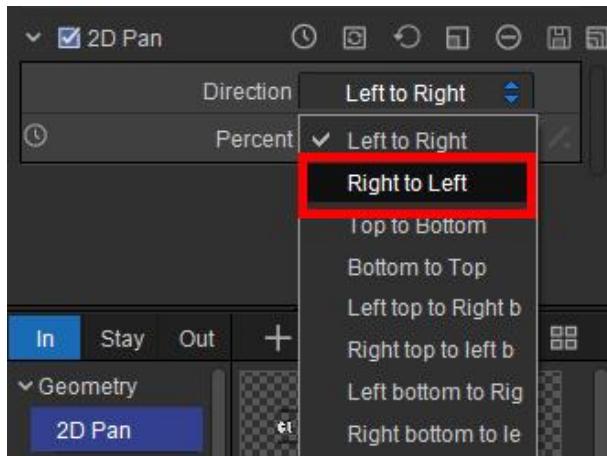

#### 2. Activate effect in Timeline Set percent to 0 at In point

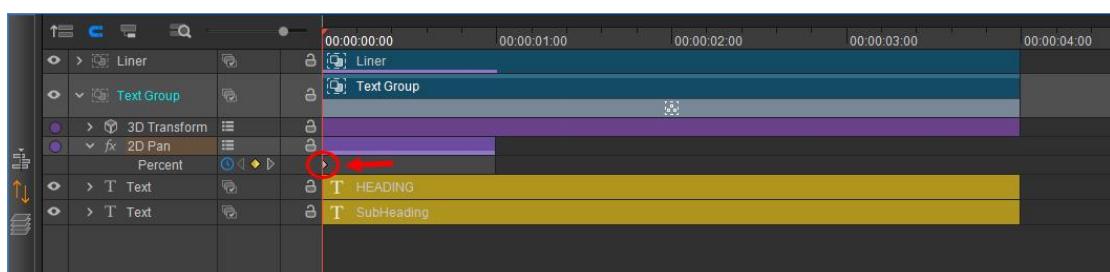

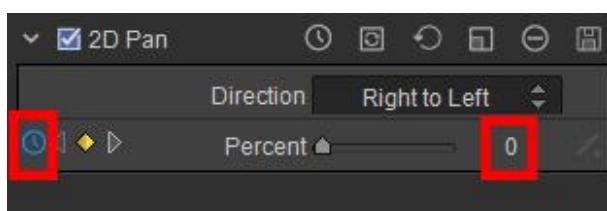

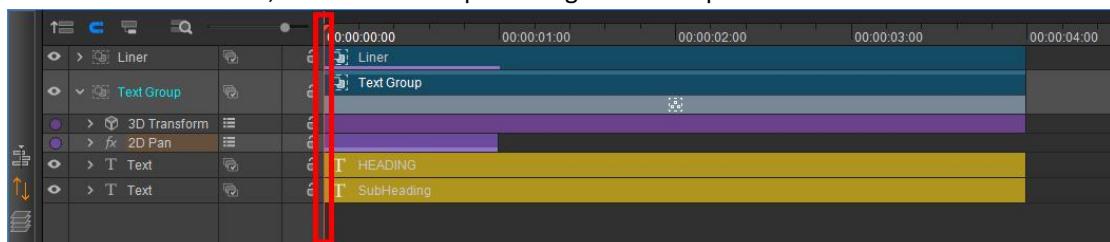

### 3. Set percent to 100 at 1 second

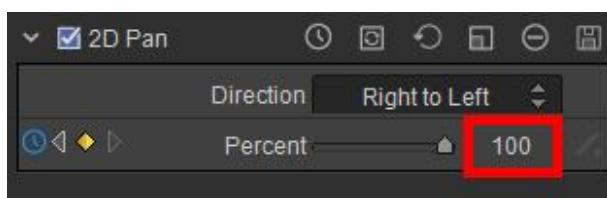

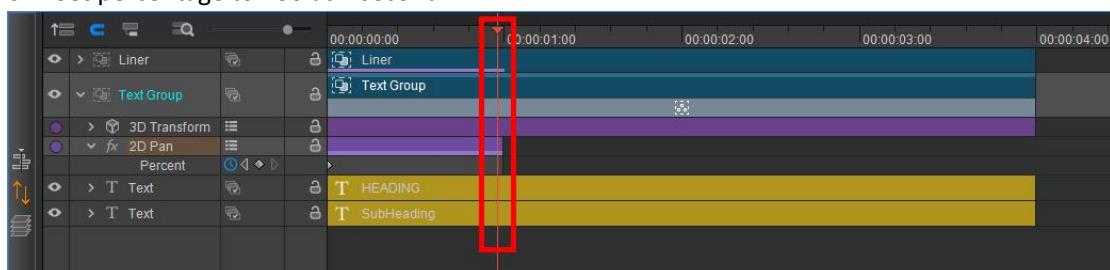

### 4. Set text group animation 2D Pan, Right to Left

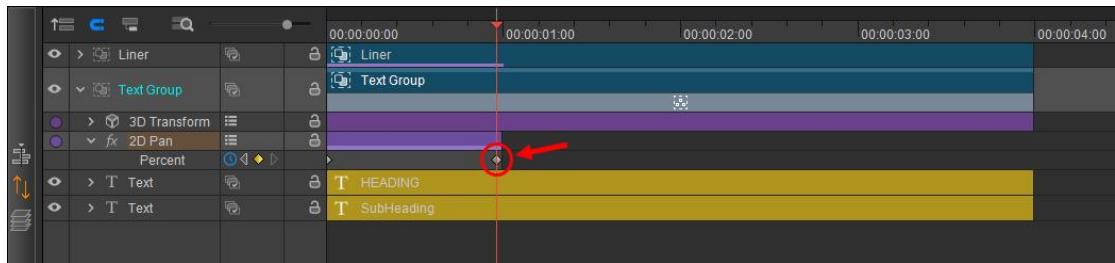

5. Activate animation, in Effect tab set percentage to 0 at In point

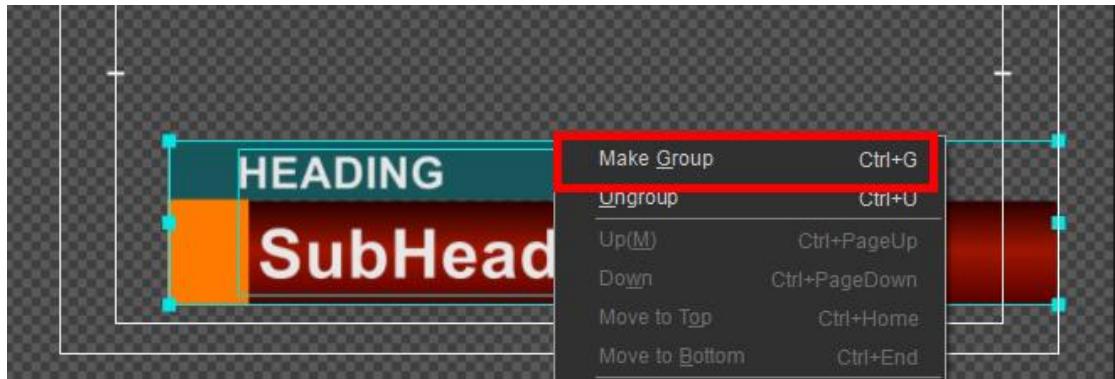

6. Set percentage to 100 at 1 second

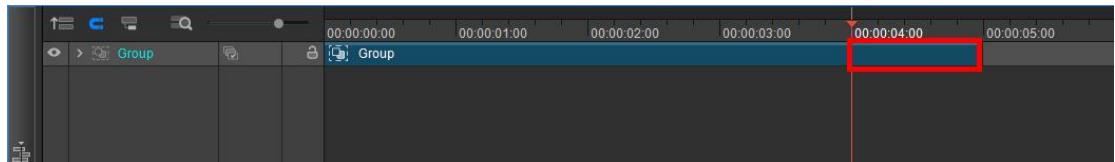

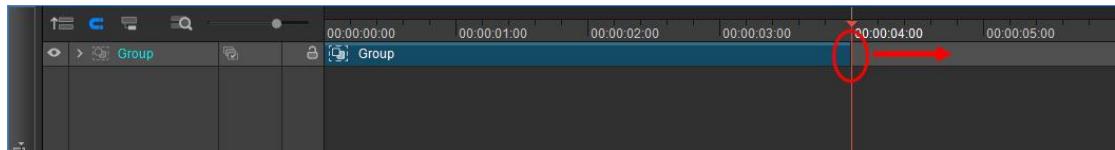

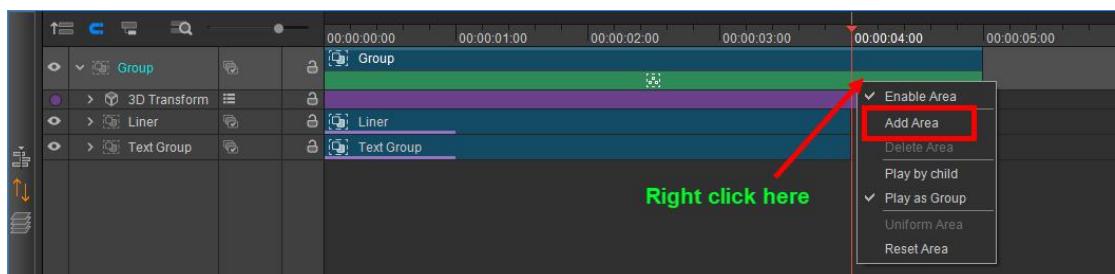

7. In the Edit Screen choose both groups, right-click and choose Make Group from context menu

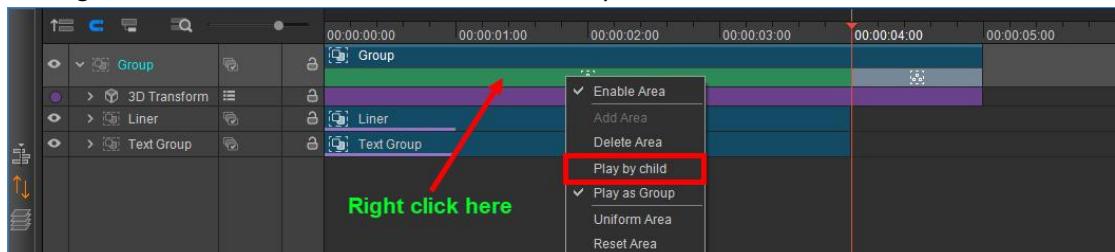

8. Hold Shift, drag Group End to 5 seconds on the Timeline

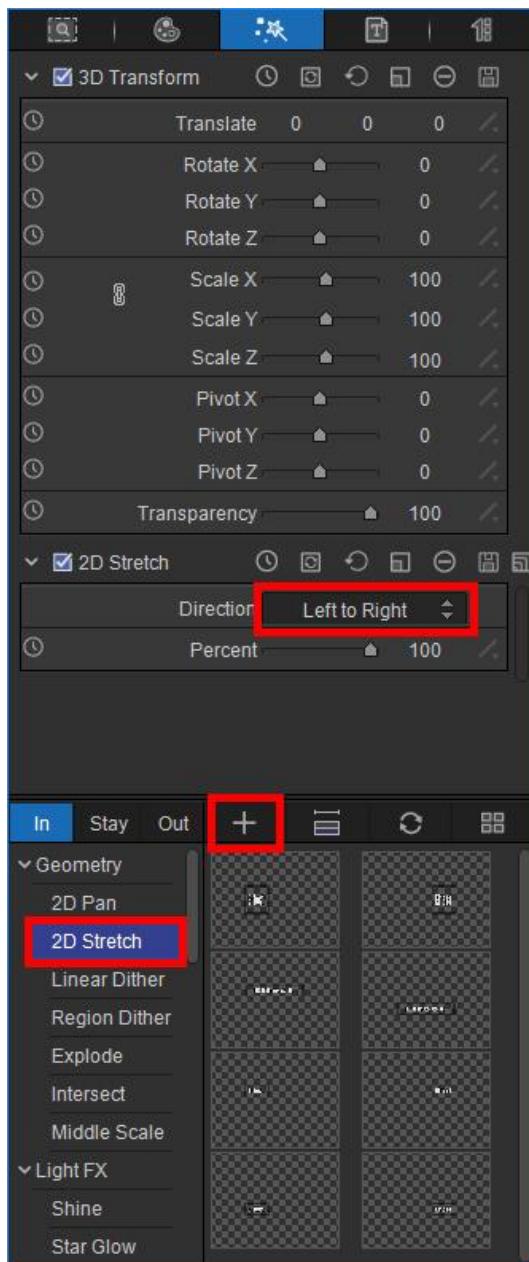

9. Set Timeline marker at 4 seconds, right-click on the track shown below, from context menu choose "Add Area"

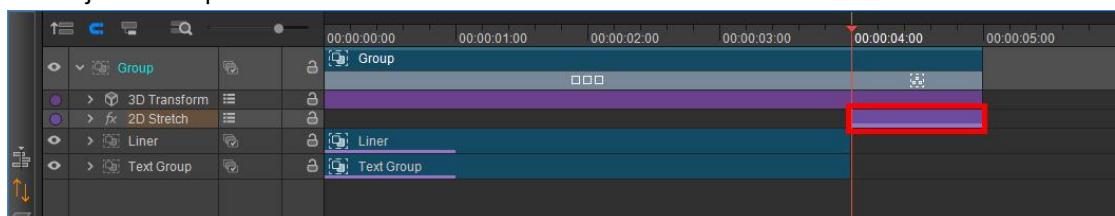

10. Right-click on the track shown, then choose "Play as Child"

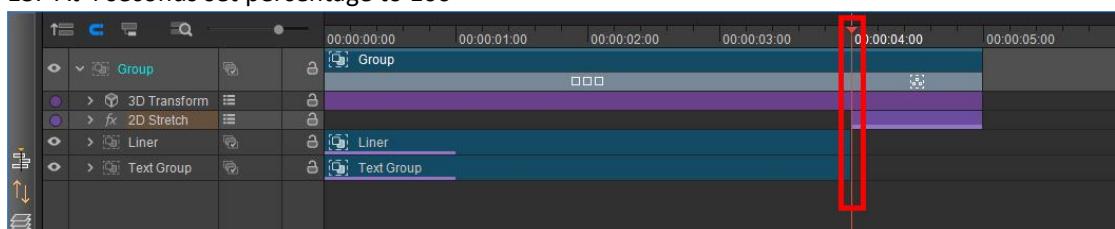

11. Add 2D Stretch effect, from Left to Right.

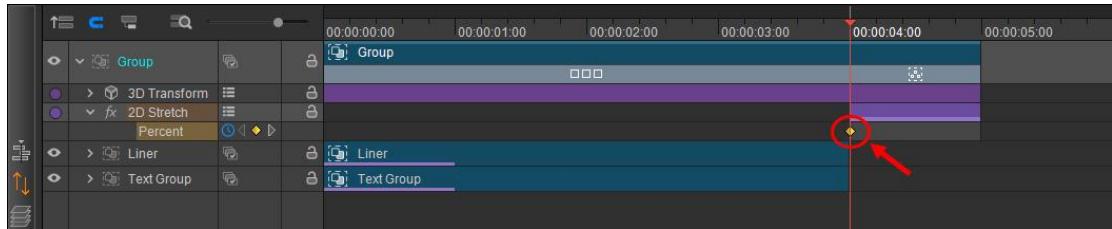

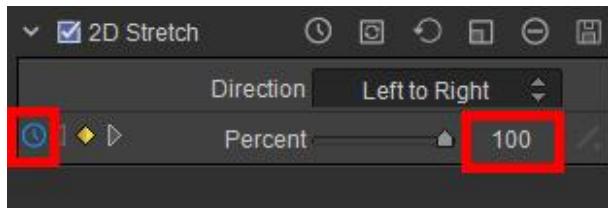

12. Adjust effect position and duration

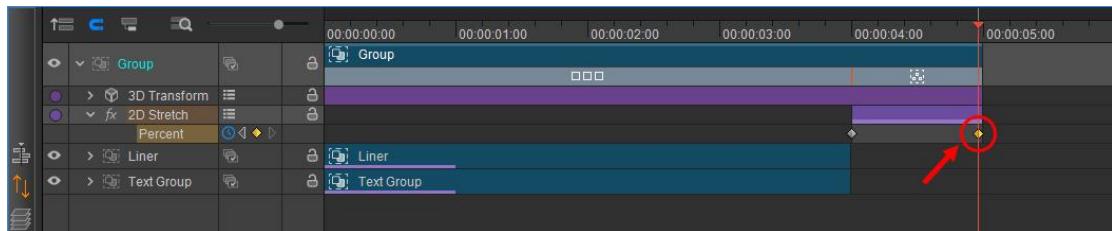

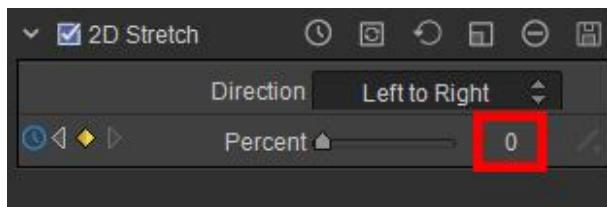

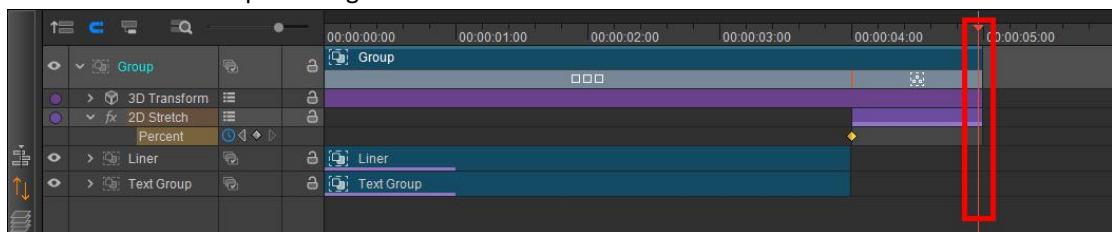

13. At 4 seconds set percentage to 100

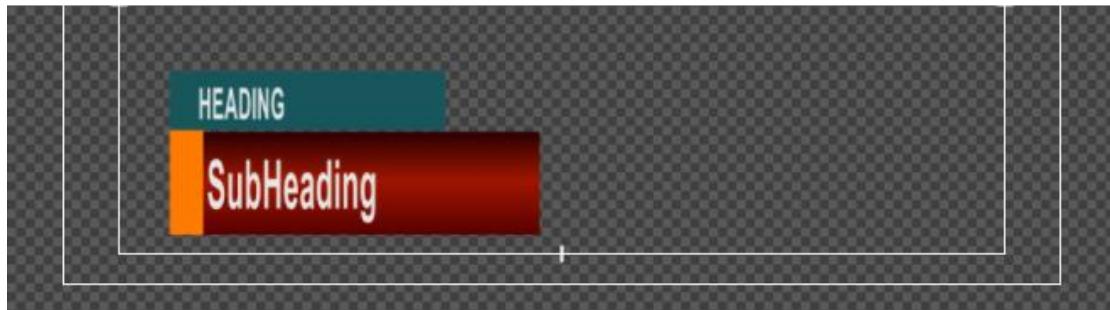

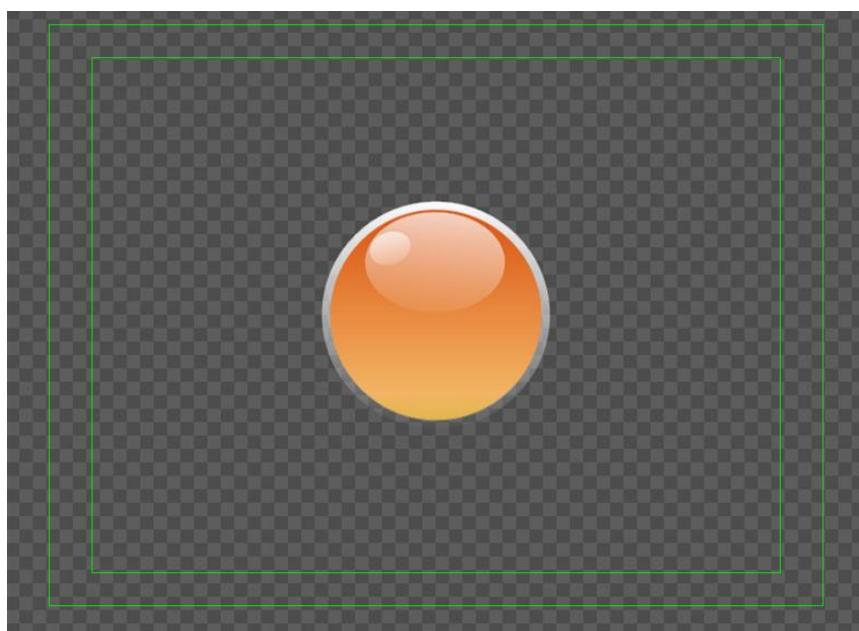

14. At 5 seconds set percentage to 0

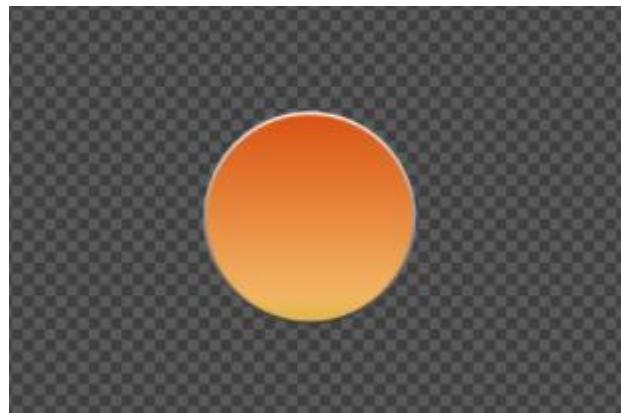

## 10.2.5. Preview

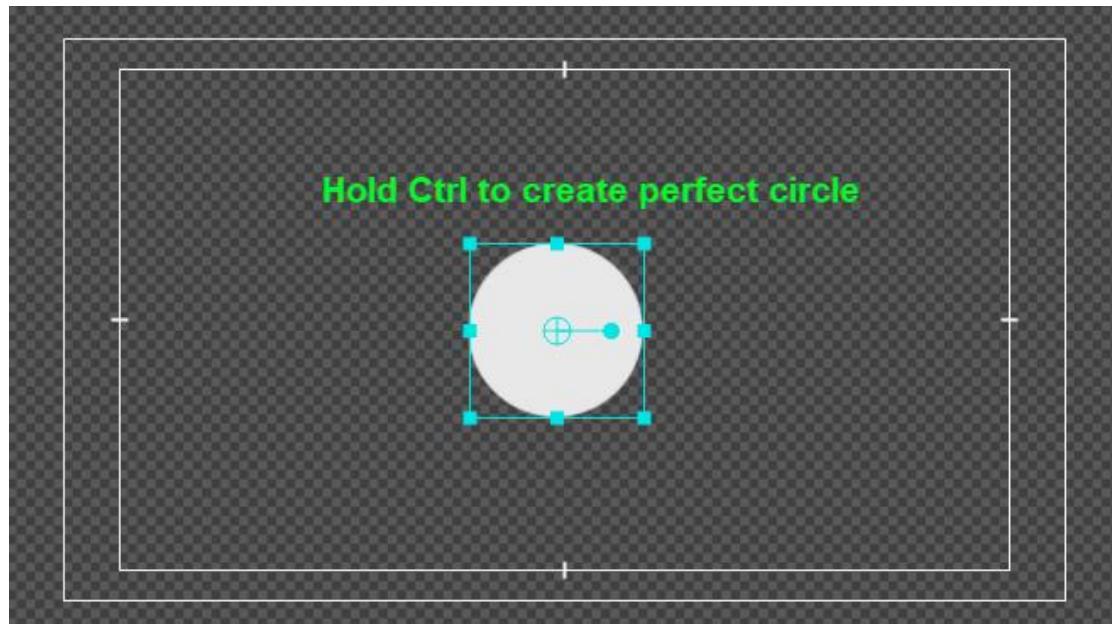

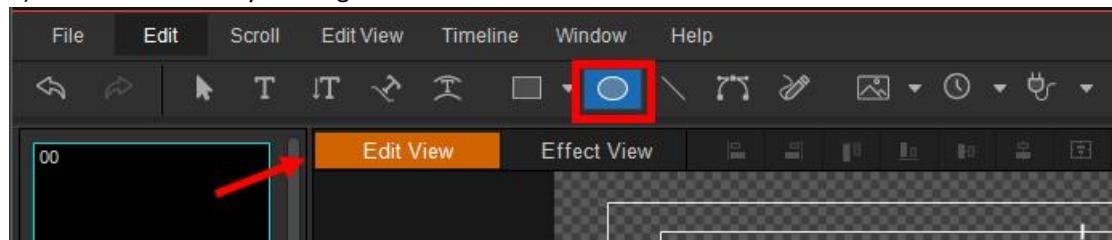

### 10.3. Create Button

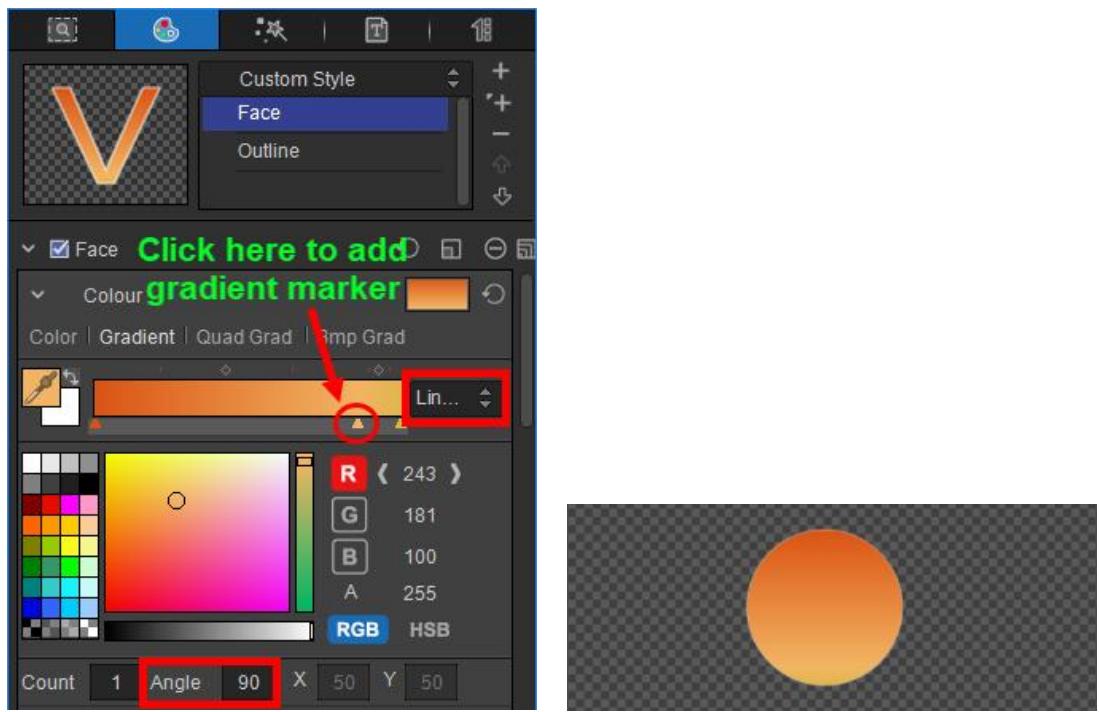

### 10.3.1. Draw Circle

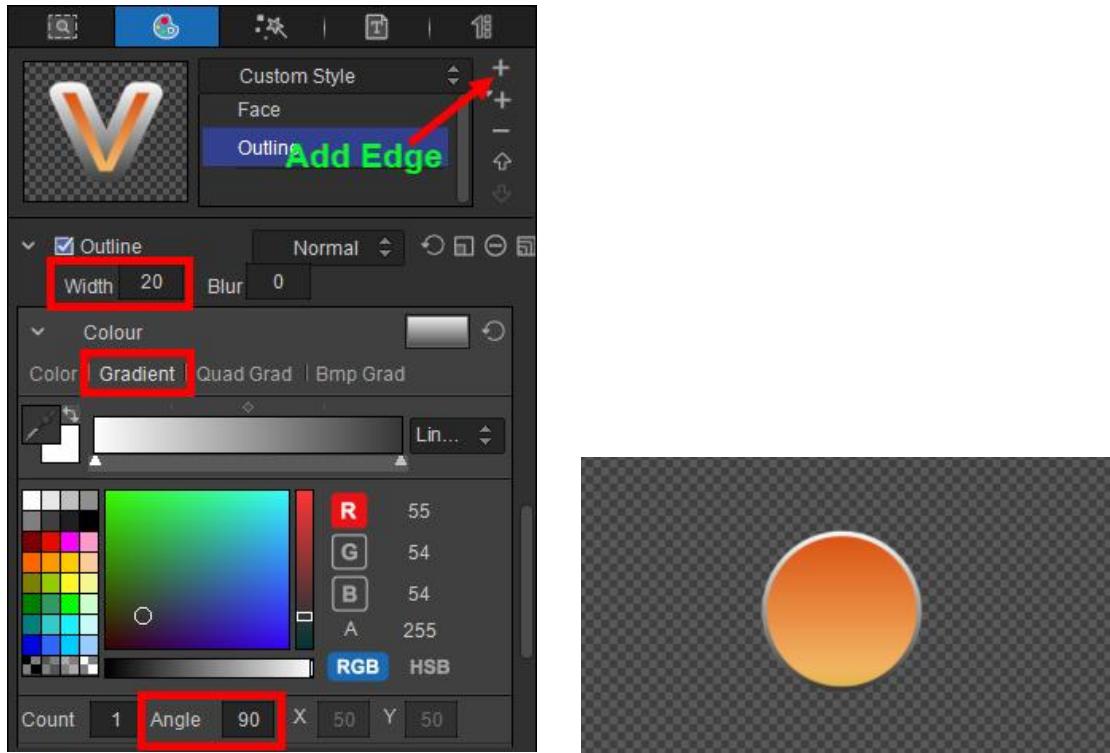

- 1) Create a circle by holding Ctrl.

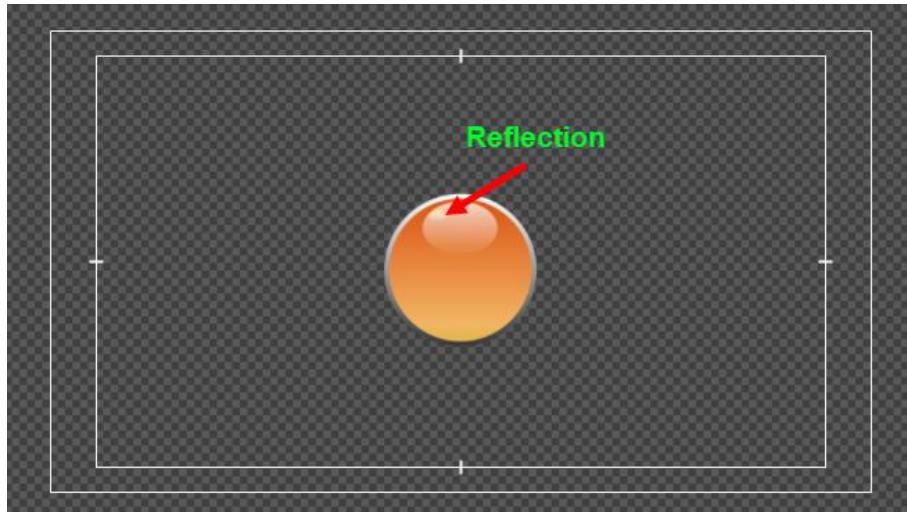

- 2) Set Shader: Gradient to Linear, 90 degrees, add Gradient Point, RGB, RGBA parameters to (218,83,20,255),(243,181,100,255),(224,182,74,255)

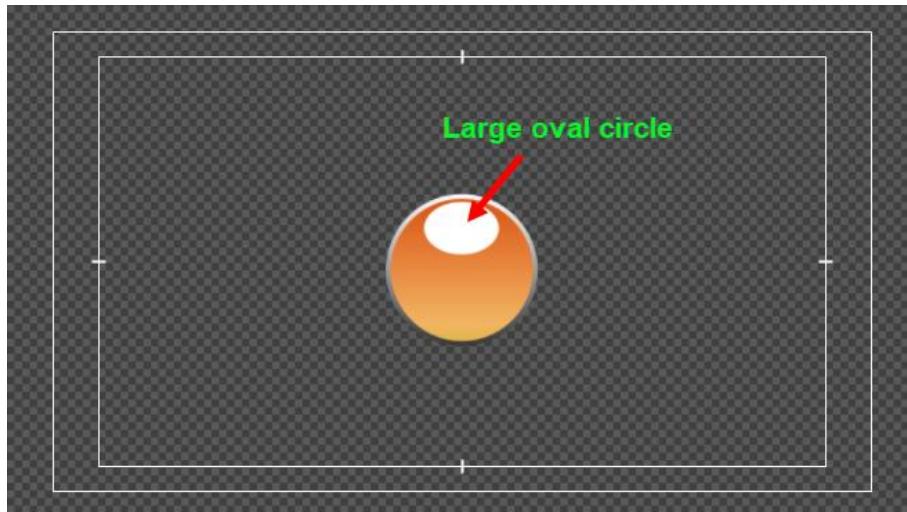

- 3) Add Edge: Width 20, Gradient to Linear, 90 degrees, both Gradient Point RGBA parameters set to (255,255,255,255),(55,54,54,255)

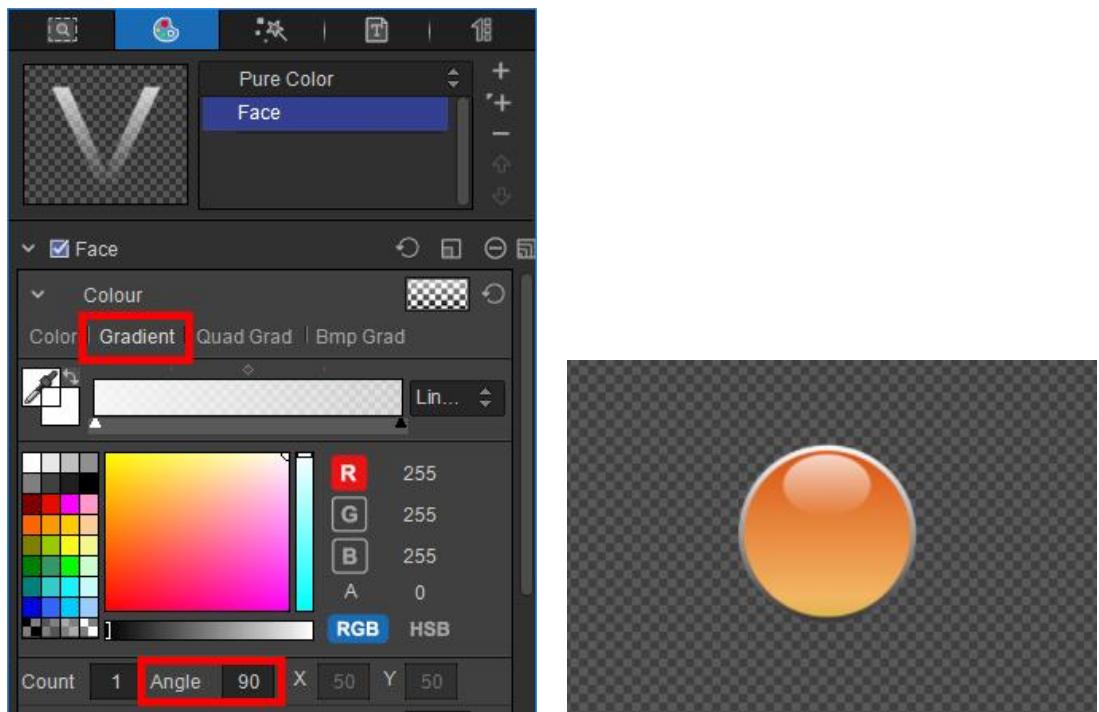

### 10.3.2. Draw Reflection

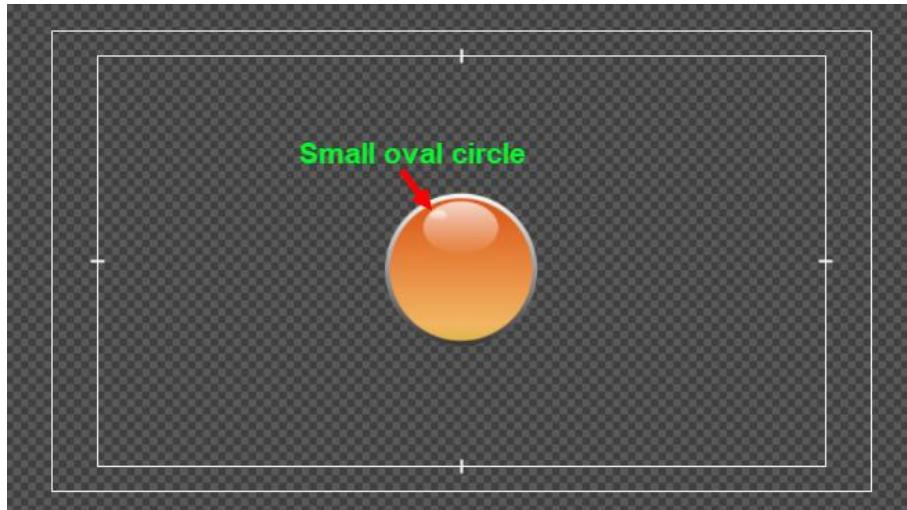

- 1) Using the Object Menu Bar, create a large oval-shaped circle

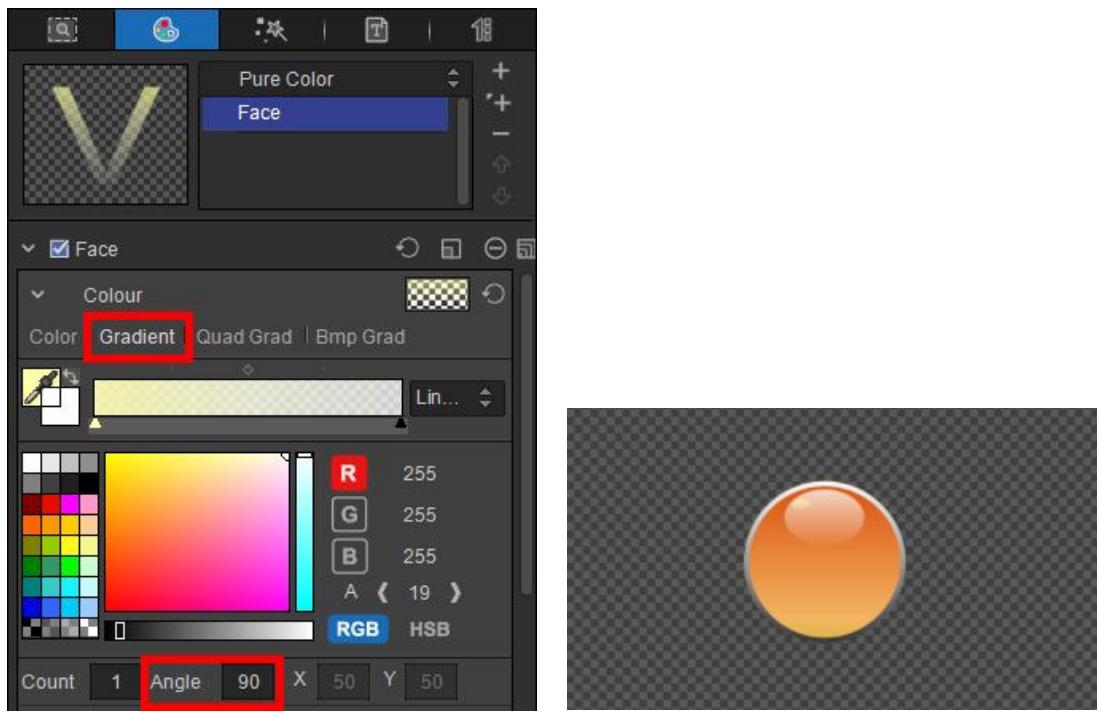

- 2) Set Shader: Gradient to Linear, 90 degrees, both Gradient Point RGBA parameters to (255,255,255,205),(255,255,255,0)

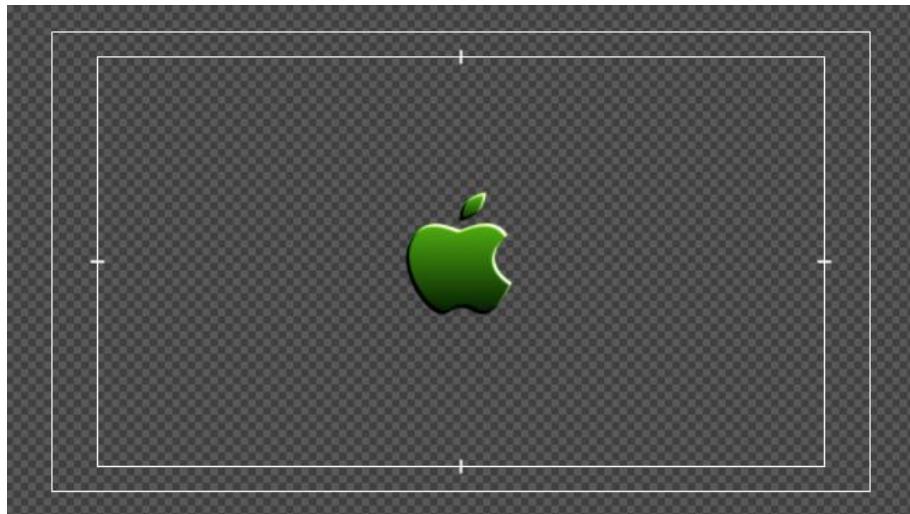

3) Using the Object Menu Bar, create a small oval-shaped circle

4) Set Shader: Gradient to Linear, 90 degrees, both Gradient Point RGBA parameters to (255,255,155,182),(255,255,255,19)

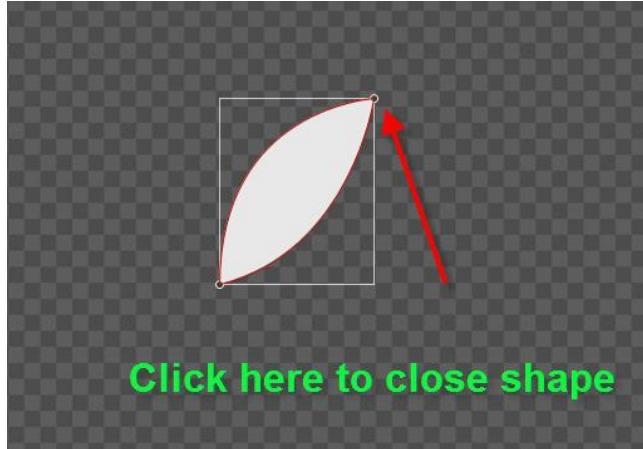

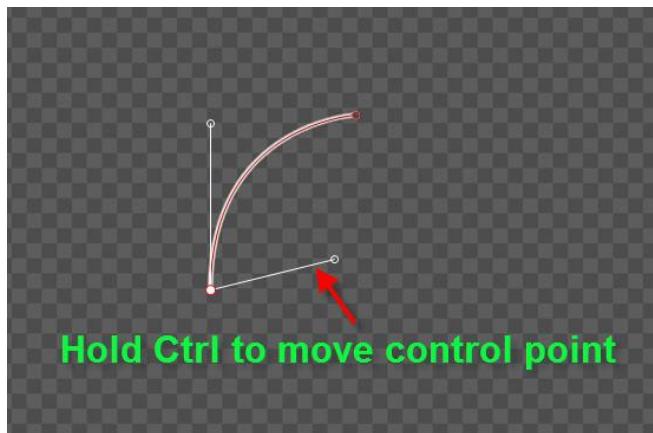

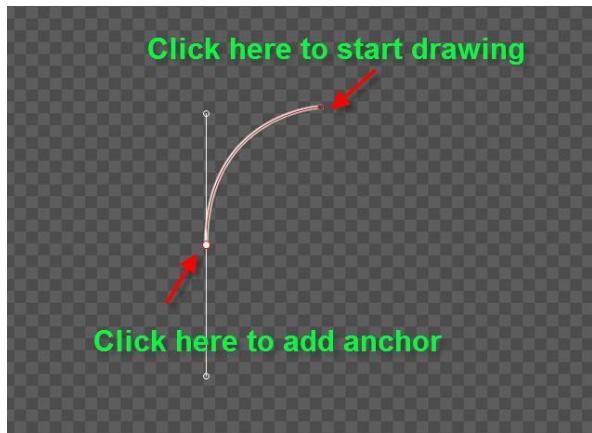

## 10.4. Create Custom Shape

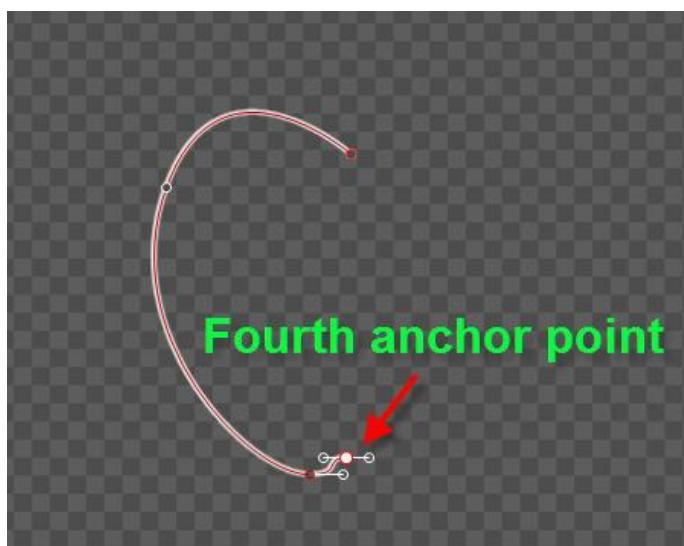

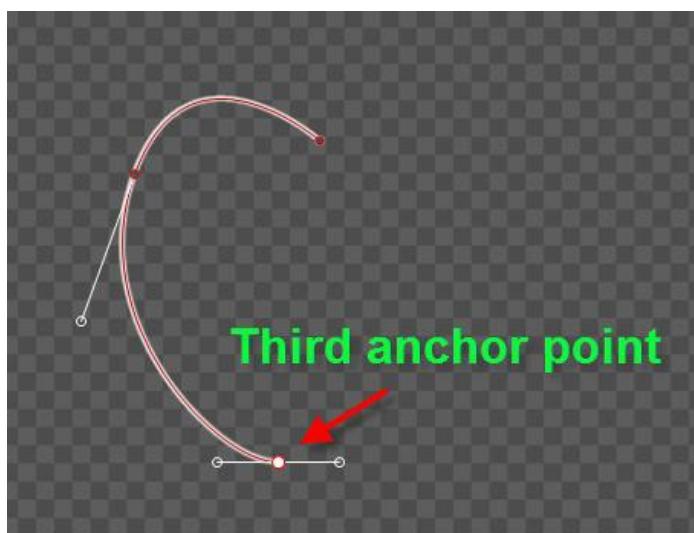

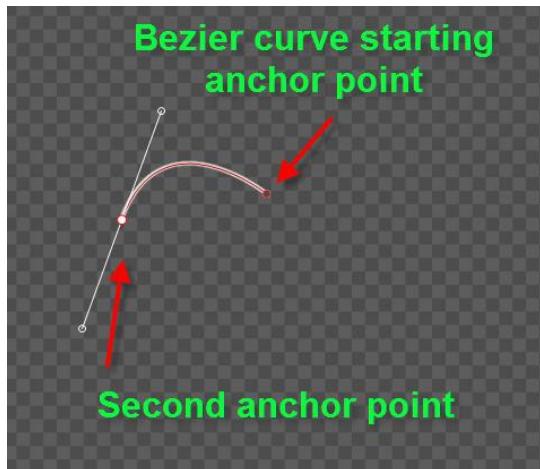

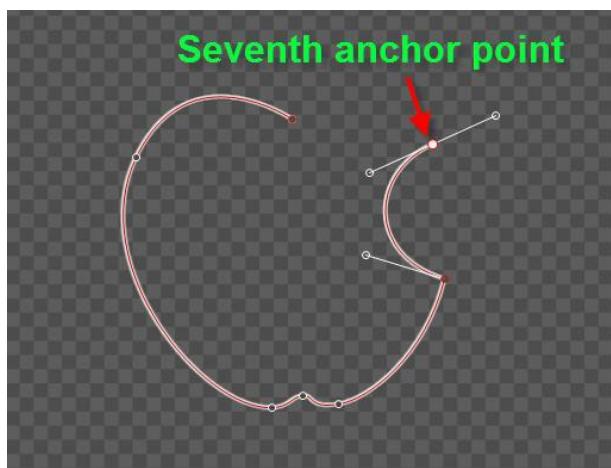

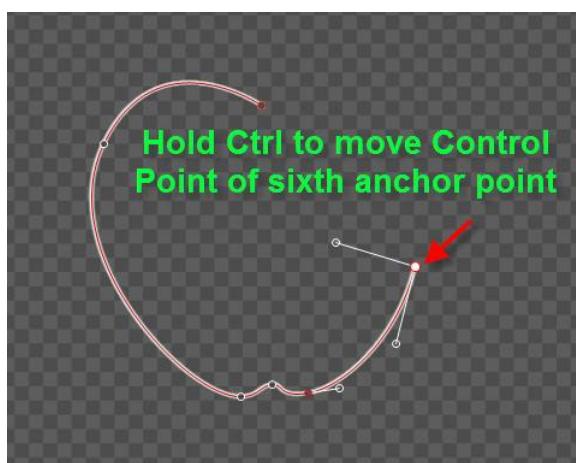

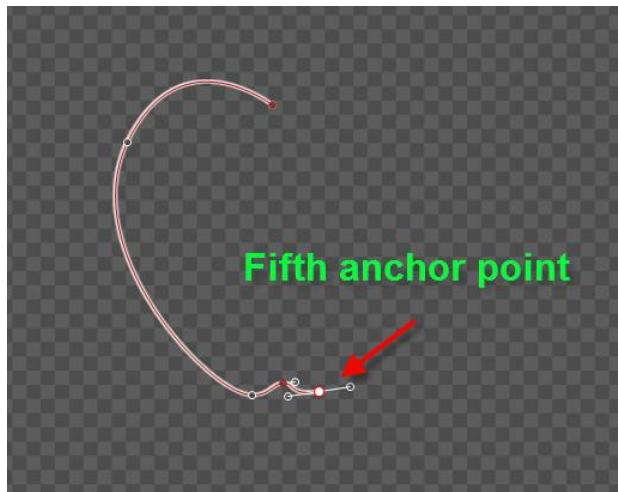

### 10.4.1. Draw Leaf

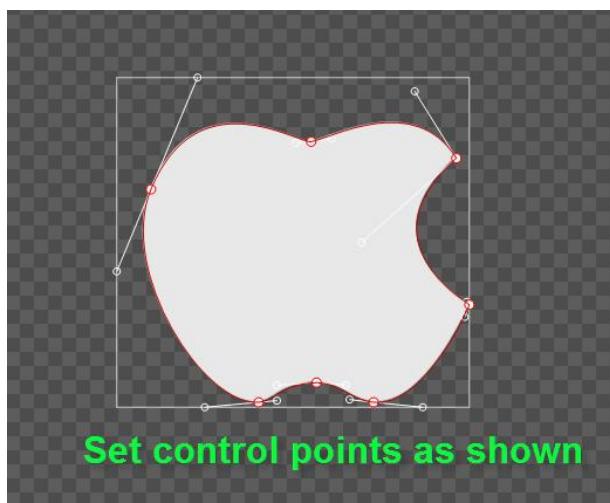

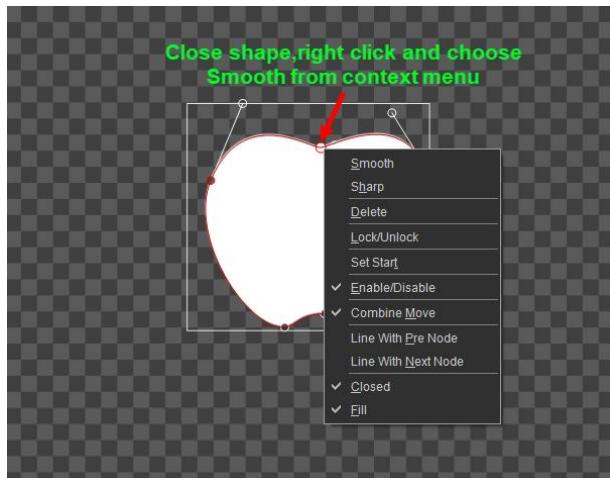

Use the Bezier Curve tools to draw the following lines

#### 10.4.2. Draw Apple

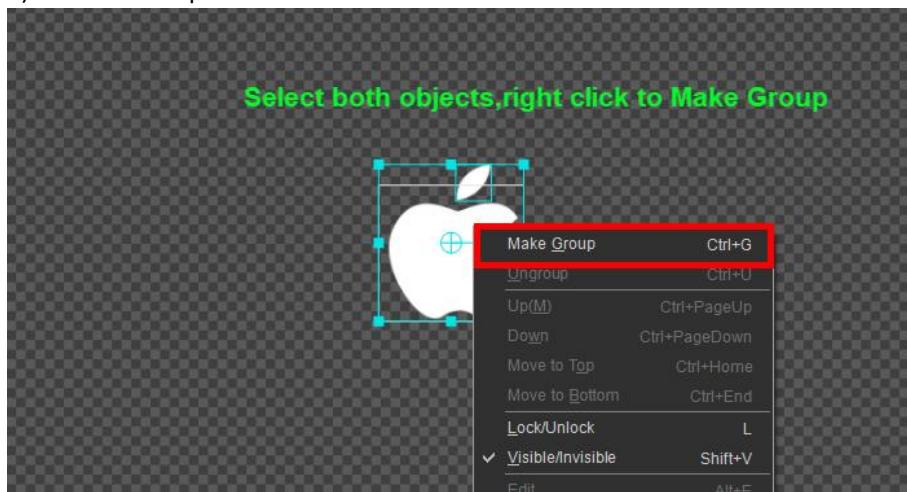

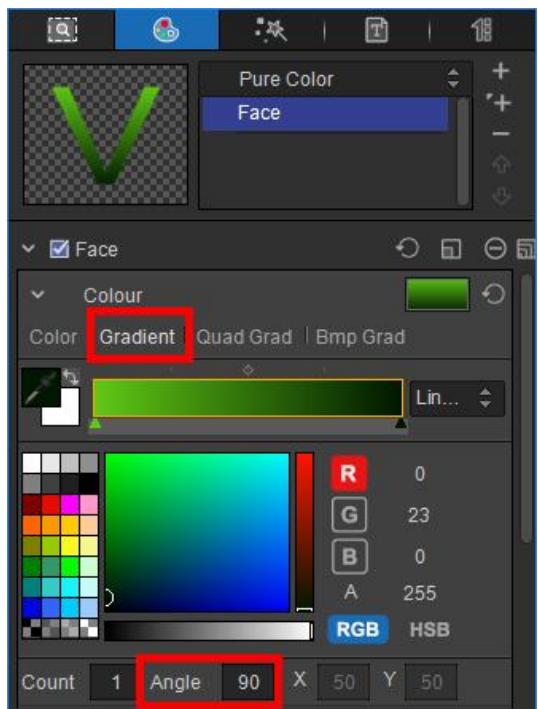

#### 10.4.3. Shader

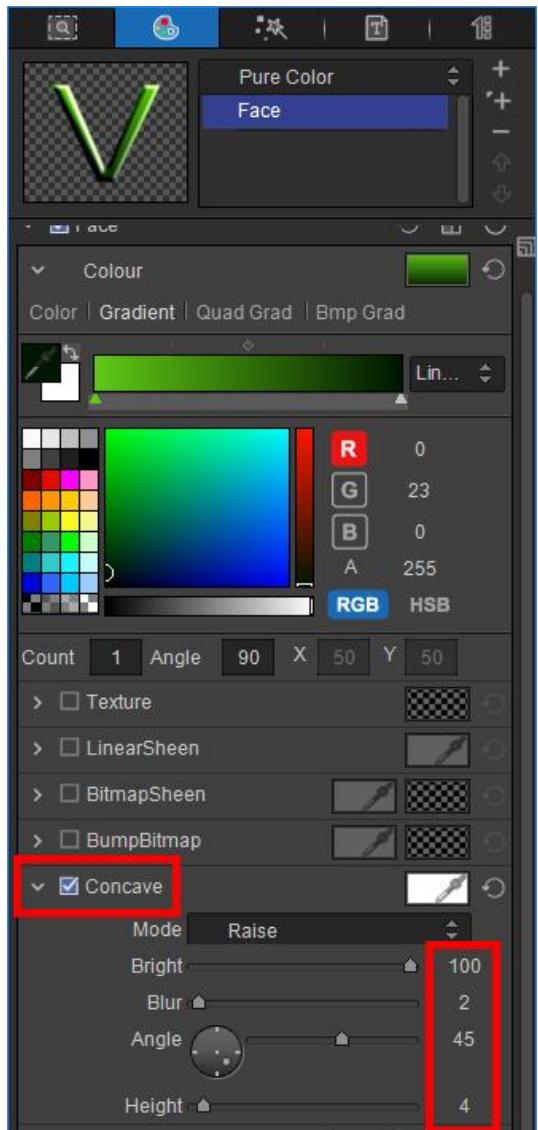

##### 1) Make Group

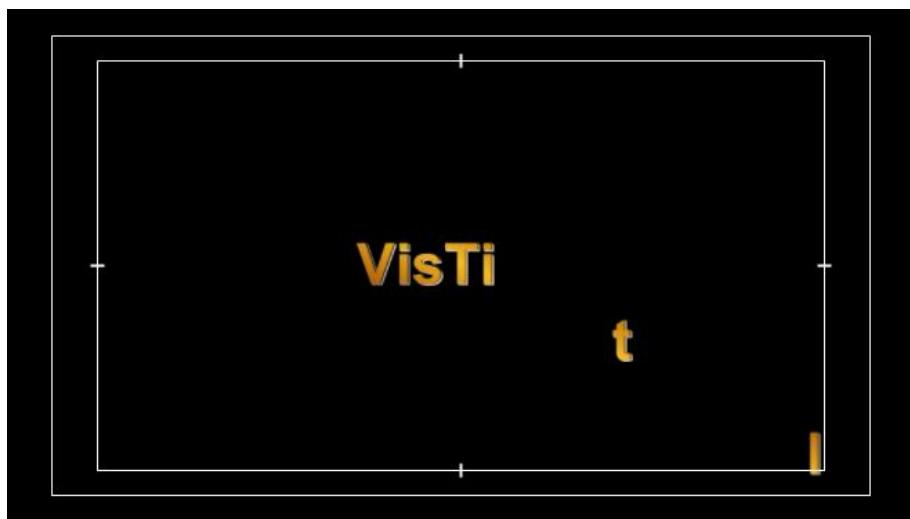

- 2) Set Shader: Gradient to Linear, 90 degrees, RGB, both Gradient Point RGBA parameters set to (96,201,21,255),(0,23,0,255)

- 3) Set Concave effect: Raise mode, Brightness 100, Blur level 2, 45 degree angle, Height 4.

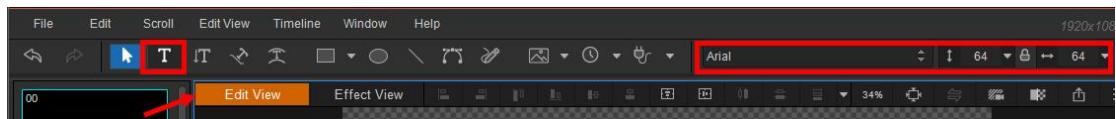

## 10.5. Create Play by Character

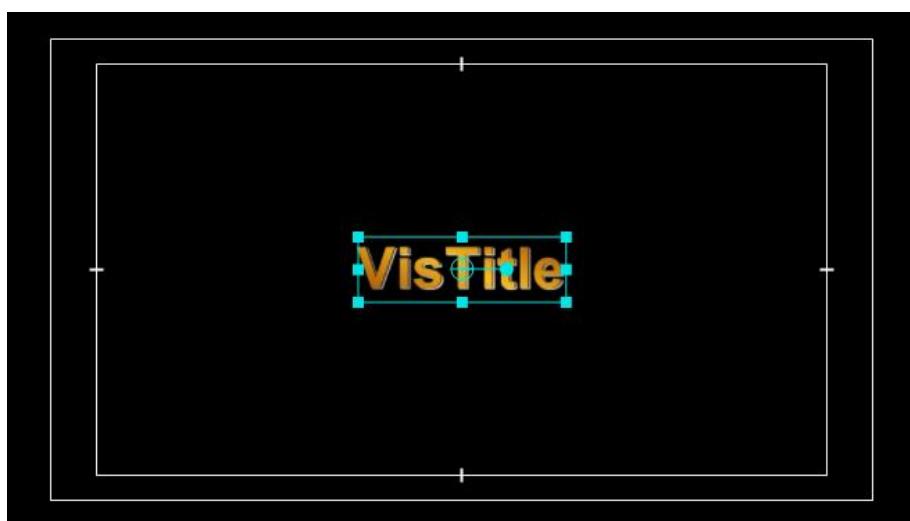

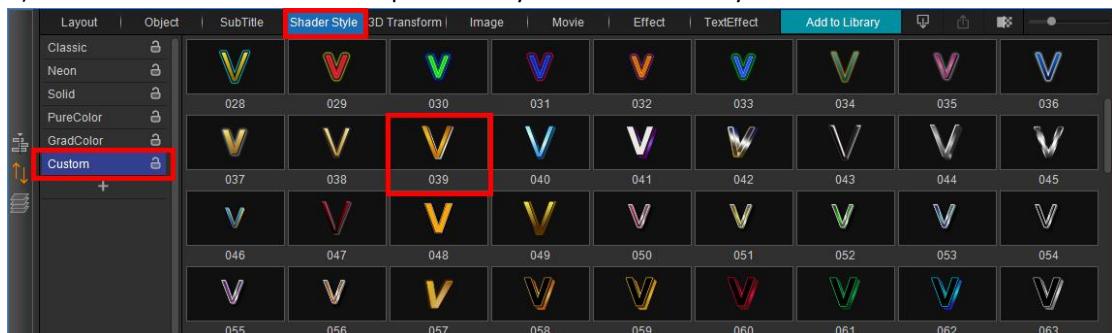

### 10.5.1. Enter Text and Shader

- 1) Using the Object Menu Bar [Text] button, enter "VisTitle", font size 64, and press "C" to centre.

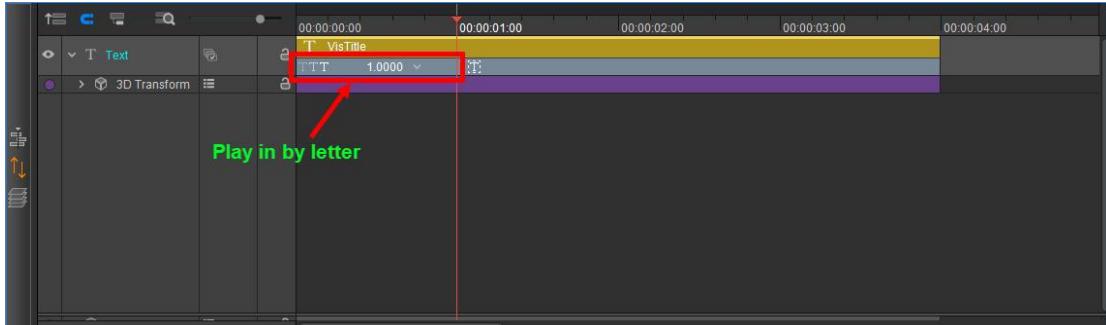

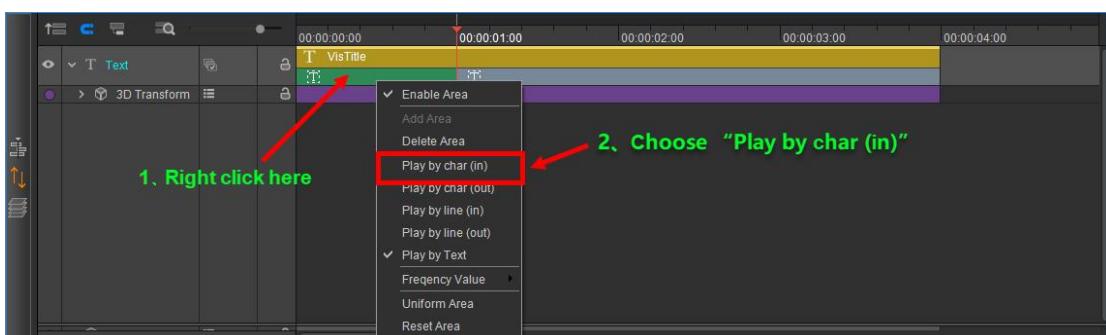

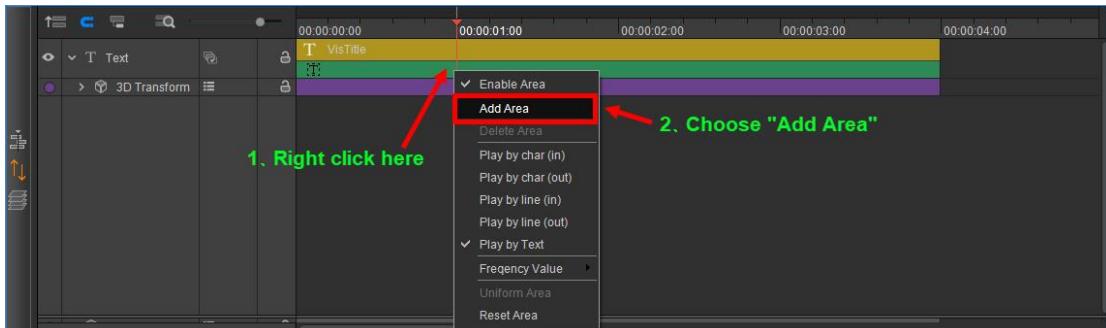

- 2) Shader: from the shader template library double-click on style 039

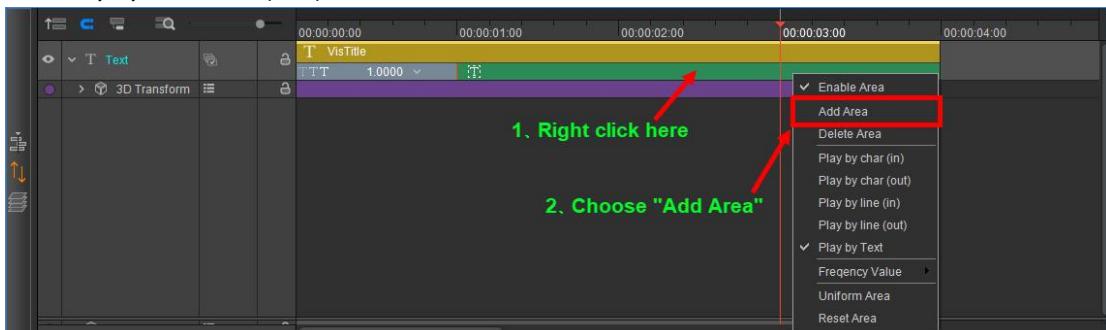

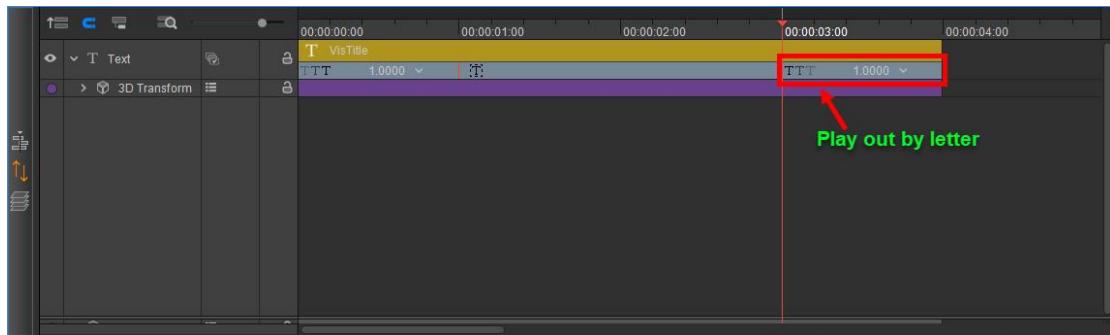

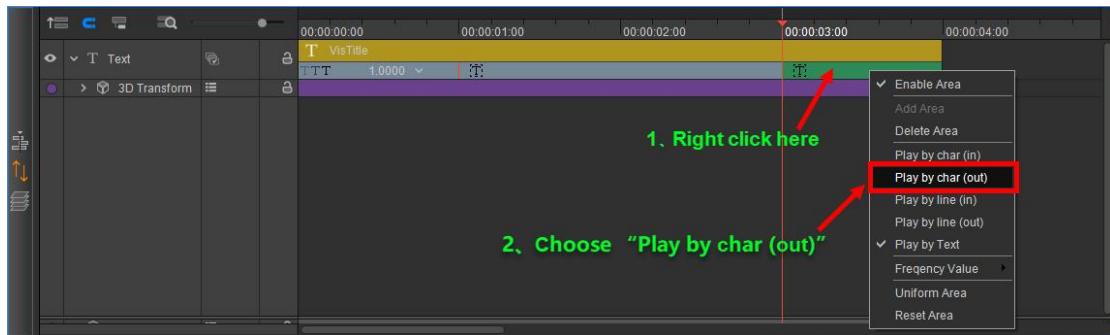

## 10.5.2. Add Area

- 1) Expand text track, drag timeline marker to 1 second, right-click on the Text track, choose Add Area. In first area, right-click and choose Play by Character (In).

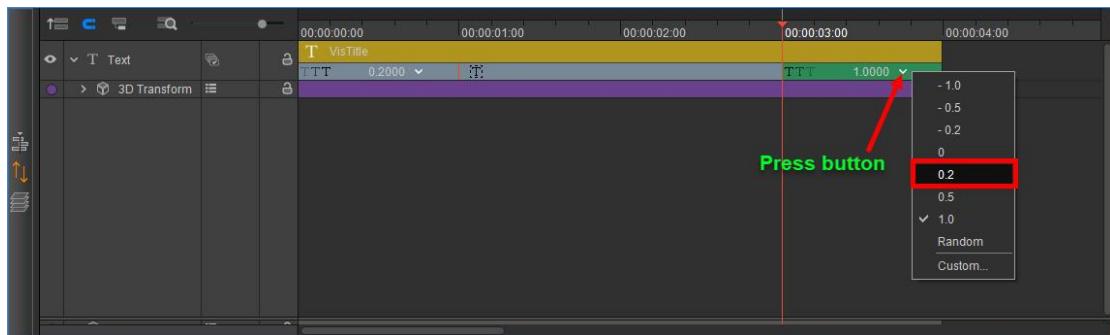

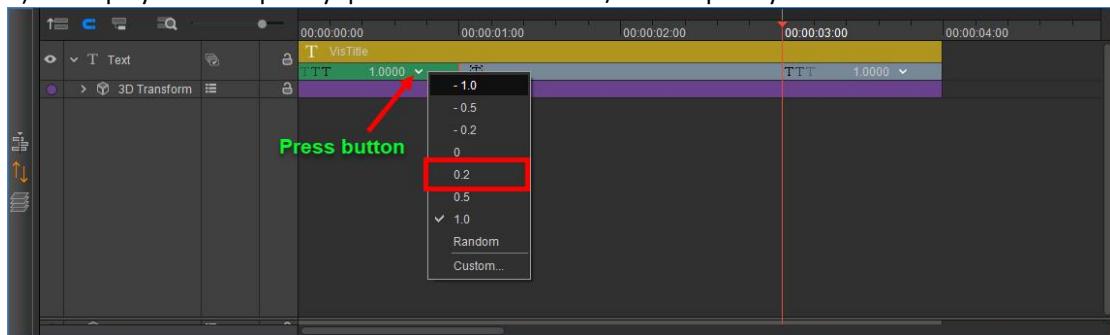

- 2) Drag timeline marker to 3 seconds, right-click Add Area. In last area right-click and choose Play by Character (Out)

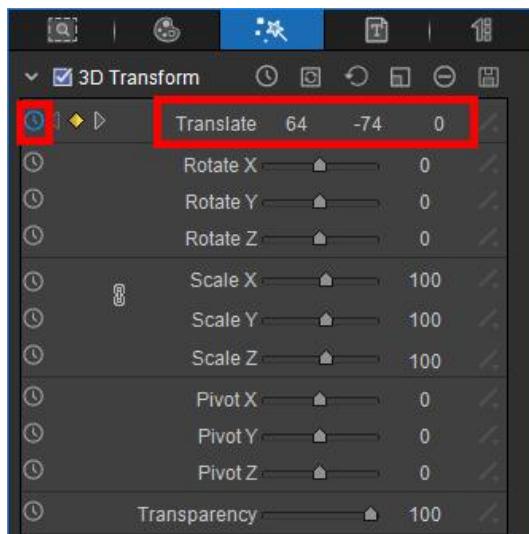

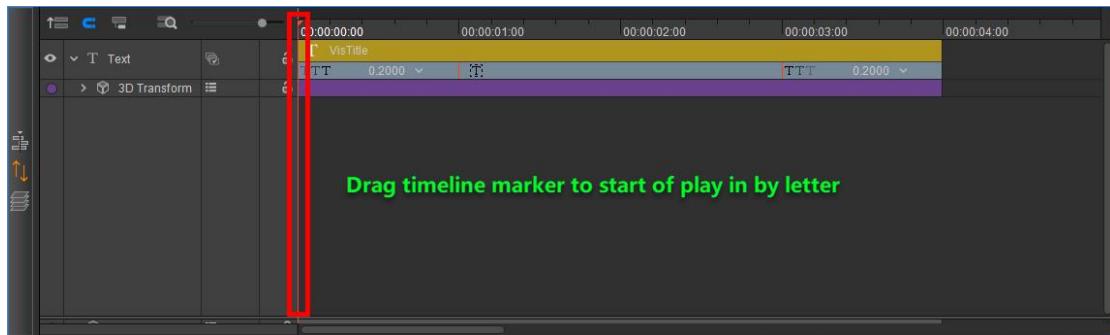

- 3) Set play area Frequency: press to set 0.2 In/Out frequency values.

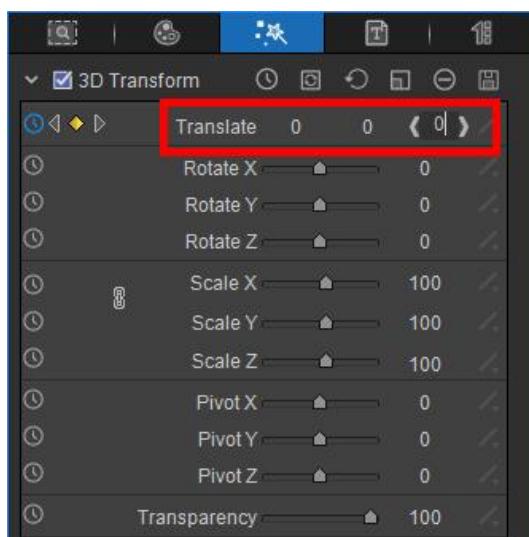

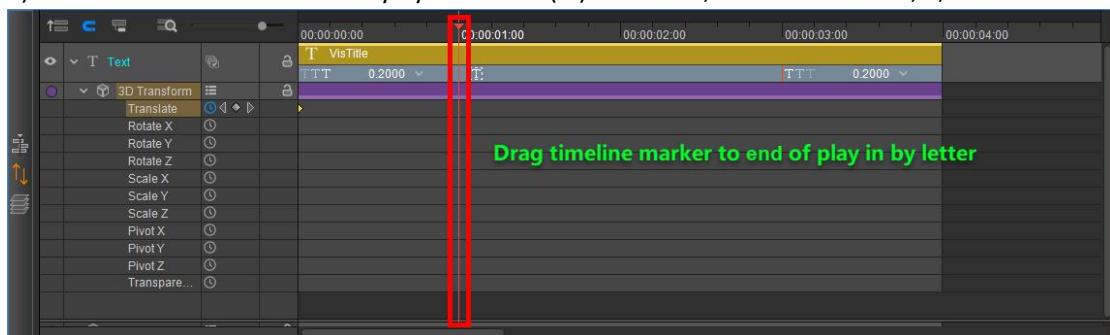

### 10.5.3. Set Keyframe in 3D Transform

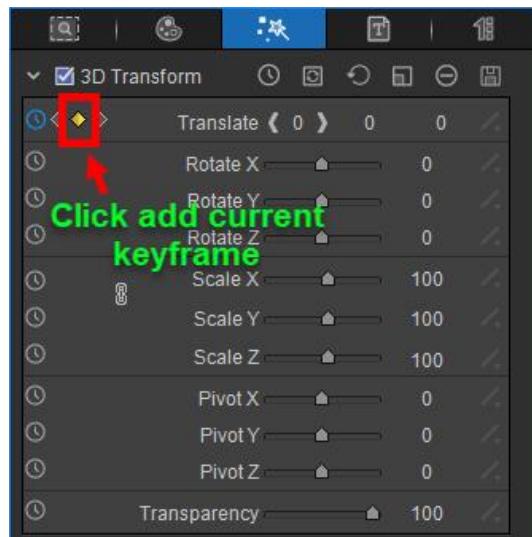

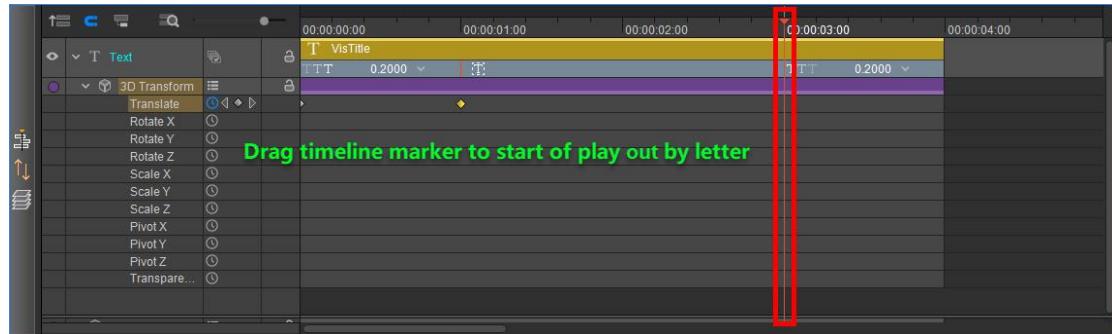

- 1) Drag timeline marker to start position, open Effect tab, set Translate XYZ positions to 64, -74, 0.

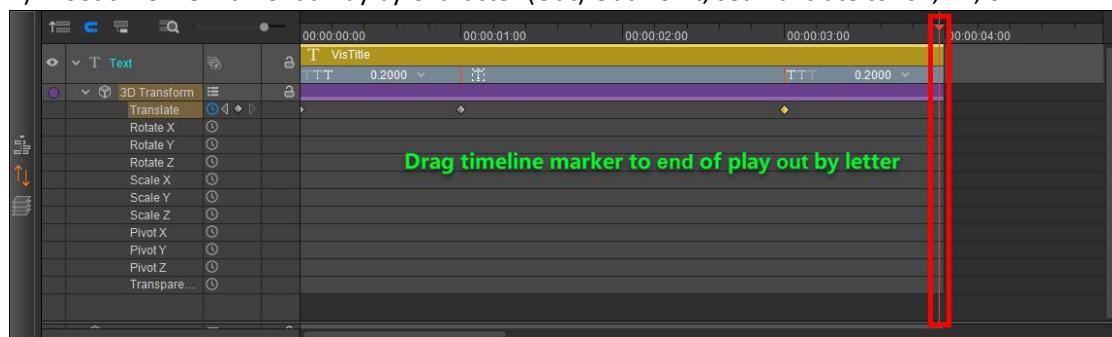

2) Place timeline marker at Play by Character (In) Out-Point, set Translate to 0, 0, 0

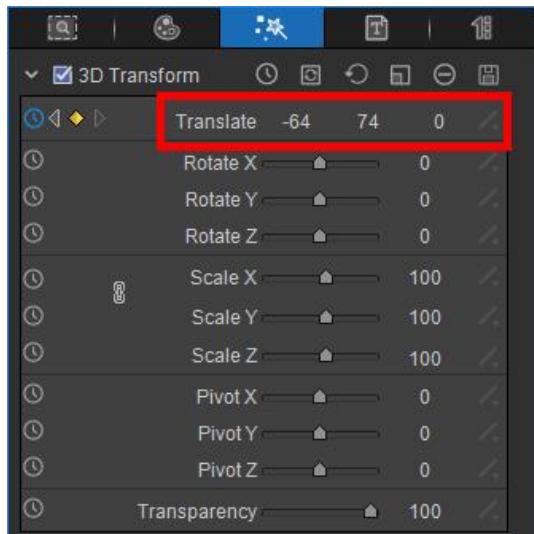

- 3) Set timeline marker at Play by Character (Out) In-Point, click Add Keyframe

- 4) Set timeline marker at Play by Character (Out) Out-Point, set Translate to -64, 74, 0

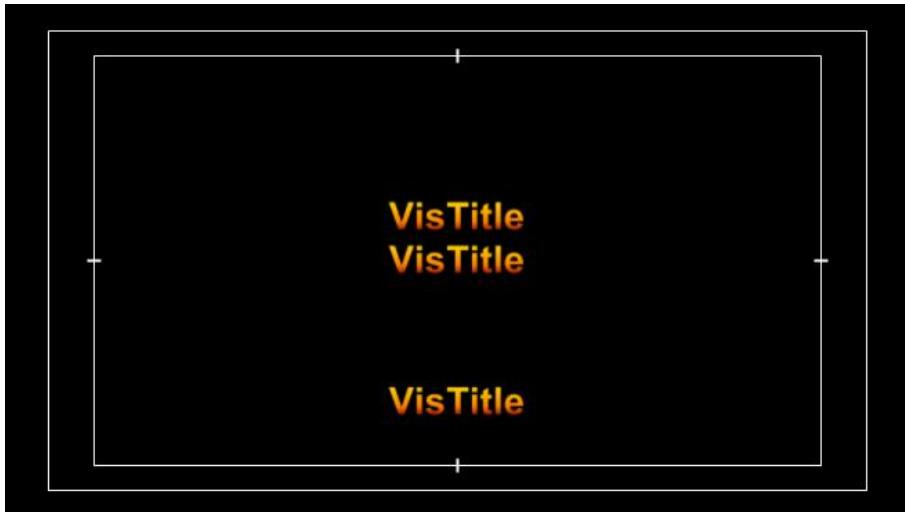

#### 10.5.4. Preview

## 10.6. Create Play by Line

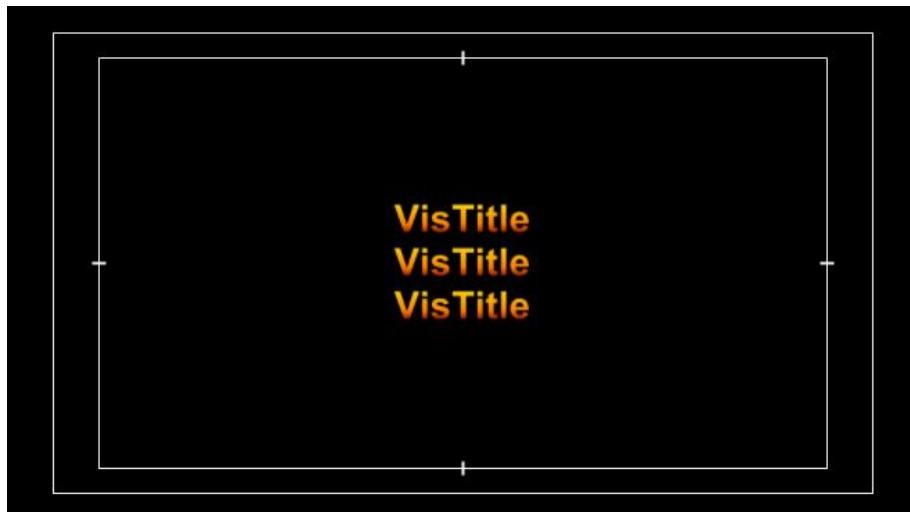

### 10.6.1. Enter Text and Shader

- 1) Write "VisTitle" three times on three different lines, size 40, press "C" to centre.

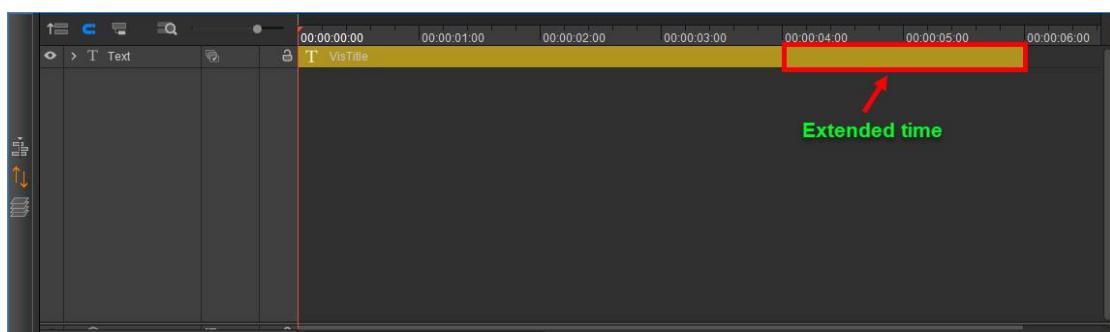

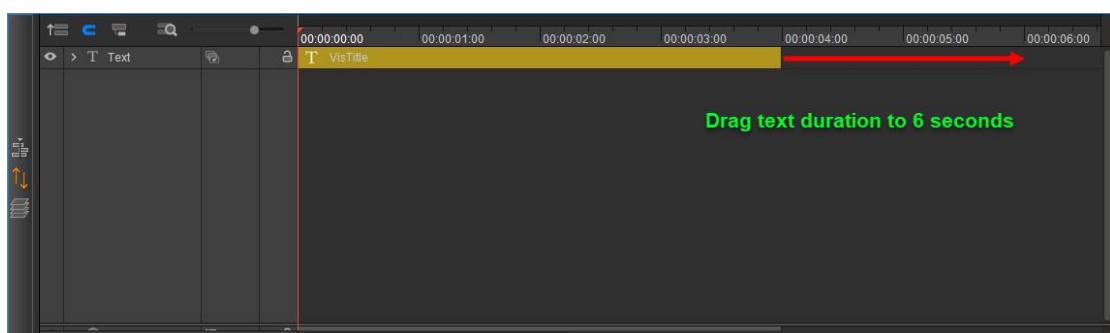

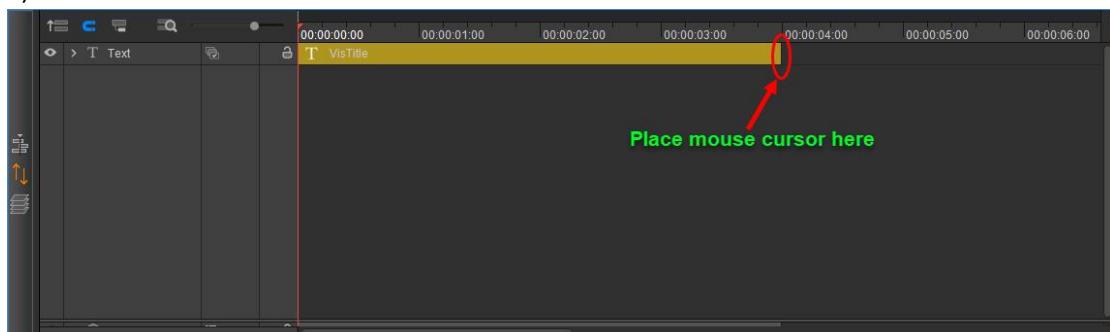

- 2) Shader: apply shader 020 from the templates library

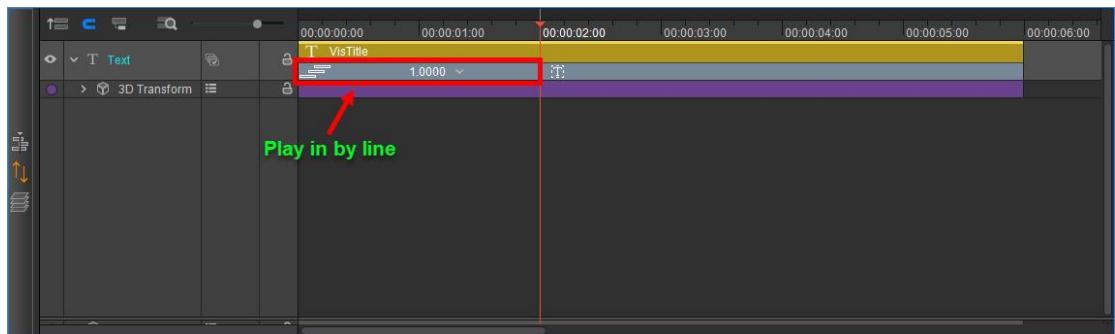

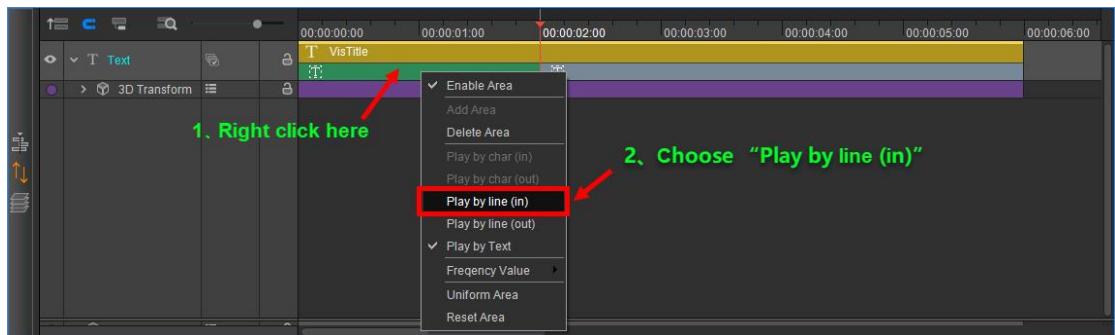

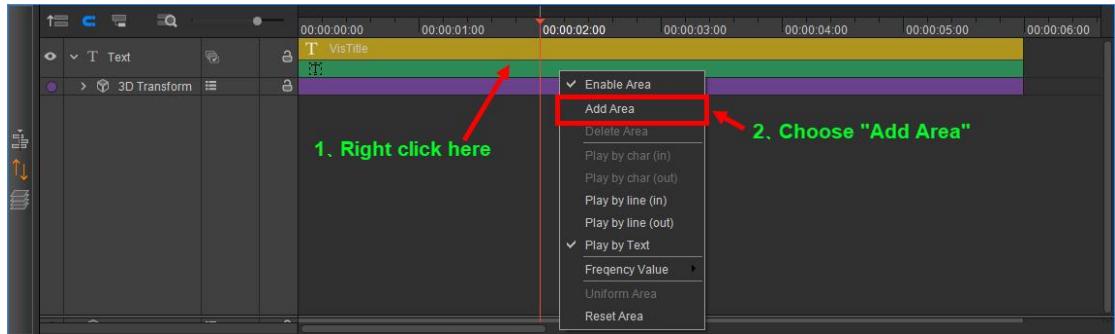

## 10.6.2. Add area

- 1) Extend duration to 6 seconds

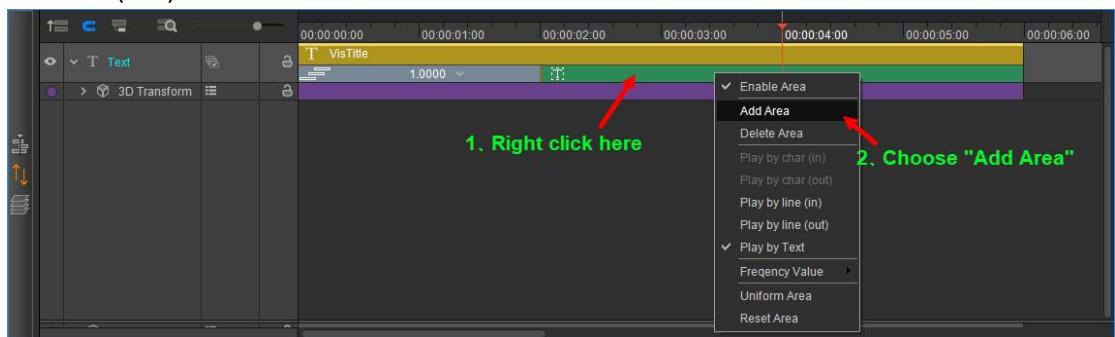

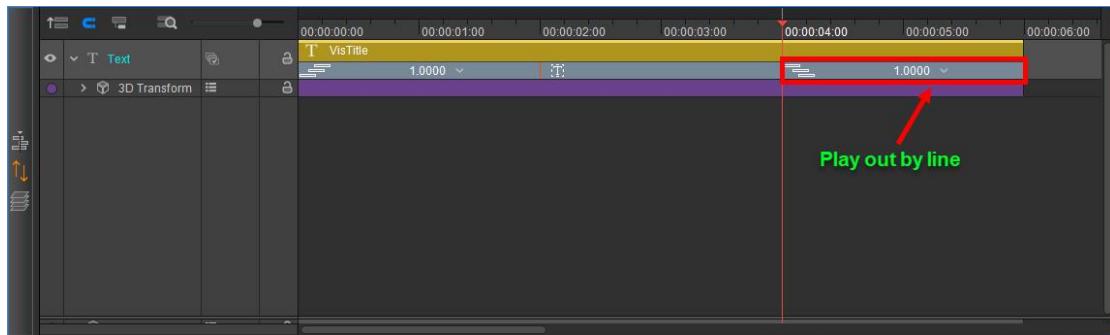

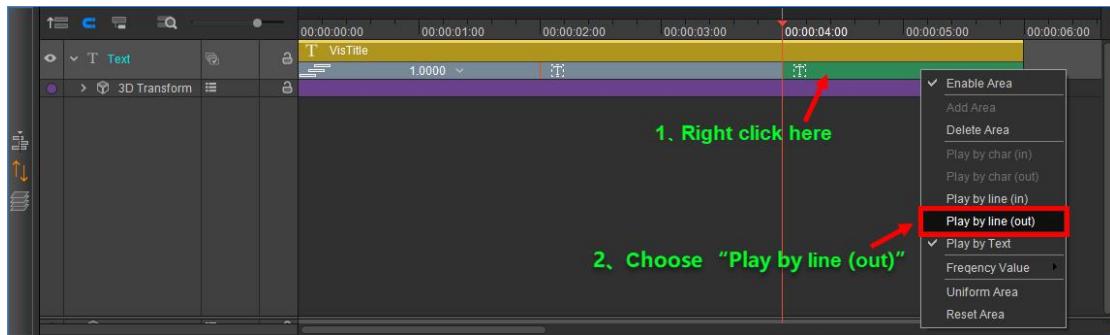

- 2) Expand tracks, drag timeline marker to 2 seconds, right-click to Add Area, right-click again to

set as Play by Line (In)

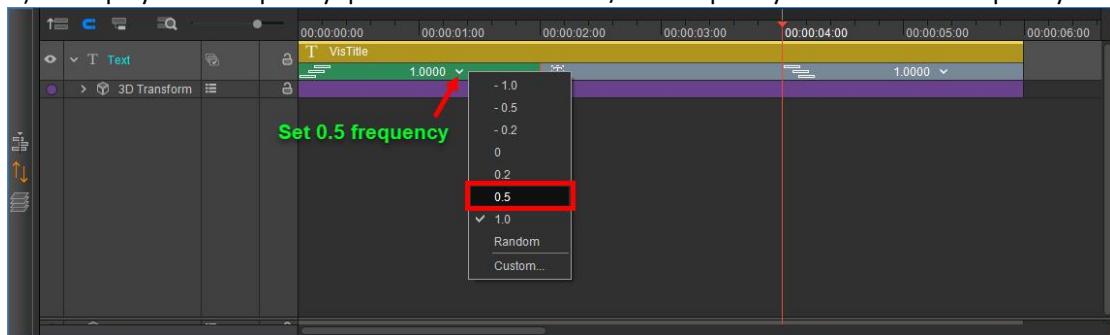

- 3) Set timeline marker at 4 seconds, right-click to Add Area, right-click again to set as Play by Line (Out)

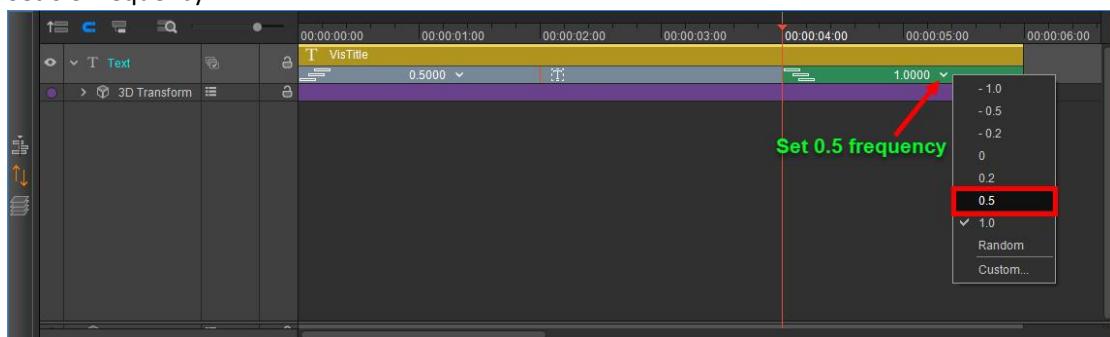

- 4) Set play area Frequency: press to set 0.5 In/Out frequency values Set 0.5 frequency

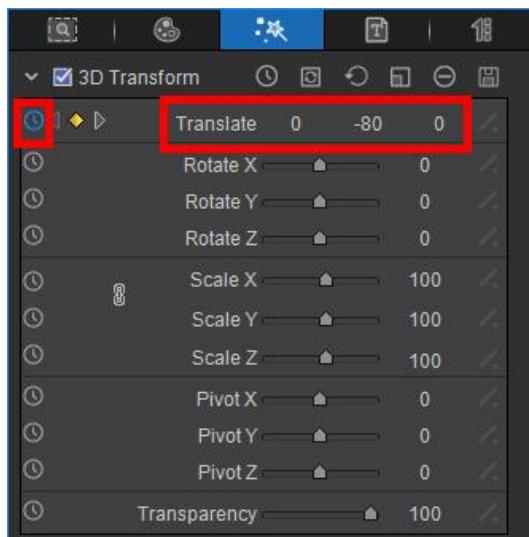

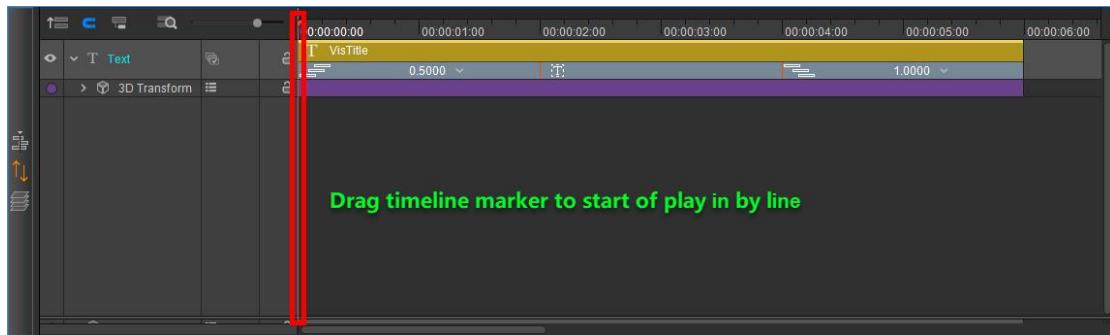

Set 0.5 frequency

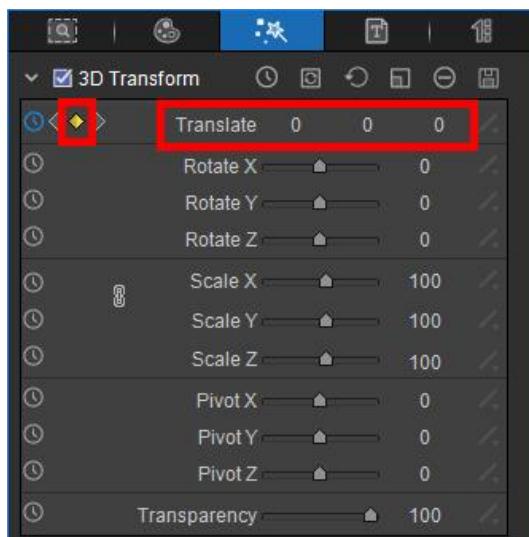

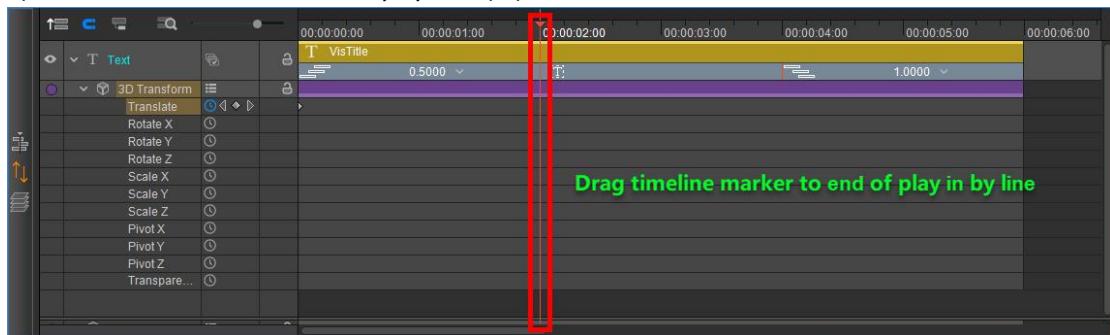

### 10.6.3. Set Keyframe in 3D Transform

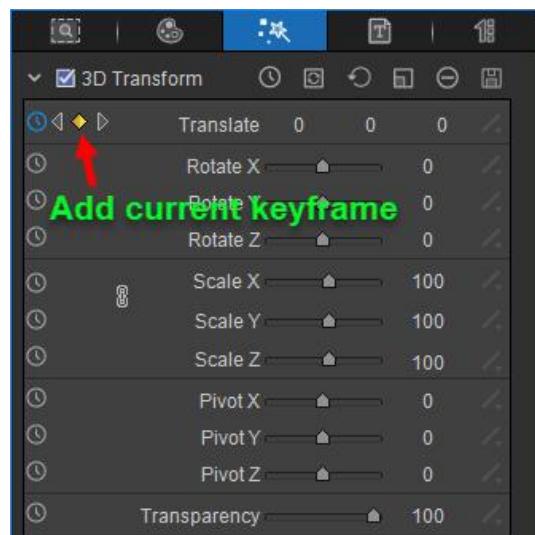

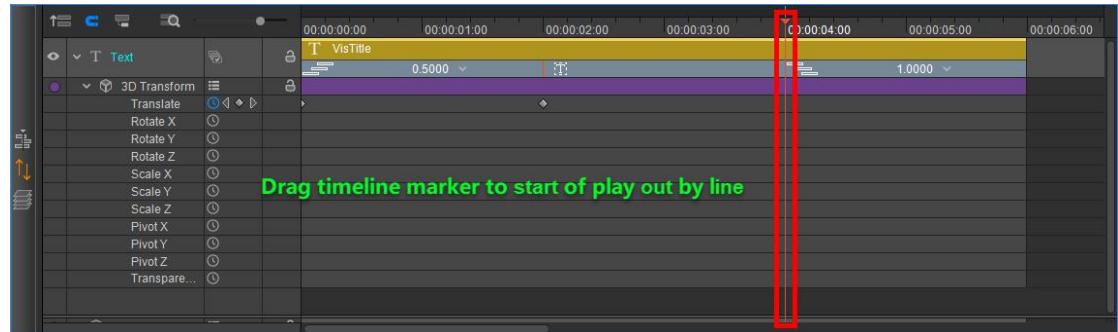

- 1) Drag timeline marker to start position, open Effect tab, set translate XYZ positions to 0, -80, 0

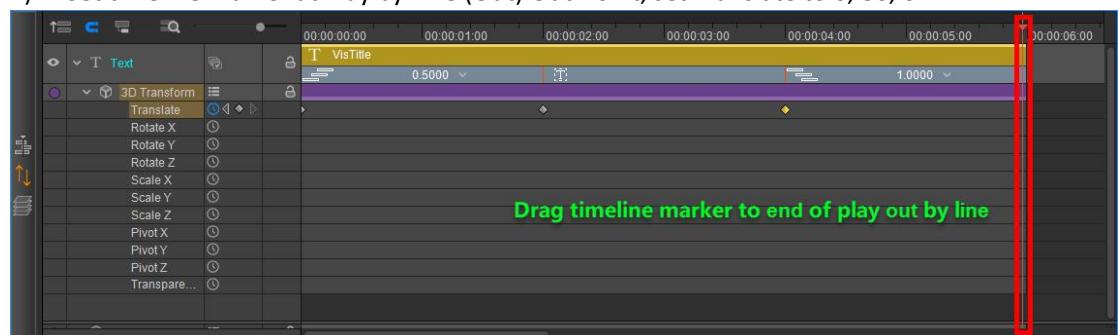

2) Place timeline marker at Play by Line (In) Out-Point, set Translate to 0, 0, 0

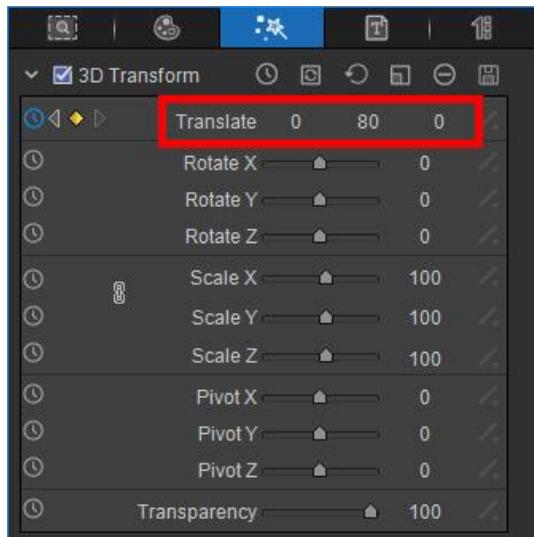

- 3) Set timeline marker at Play by Line (Out) In-Point, click Add Keyframe

- 4) Set timeline marker at Play by Line (Out) Out-Point, set Translate to 0, 80, 0

#### 10.6.4. Preview

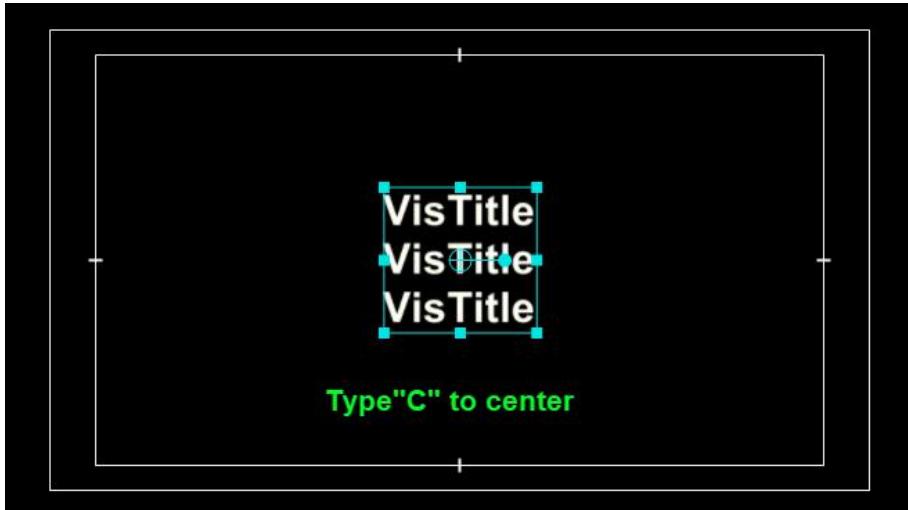

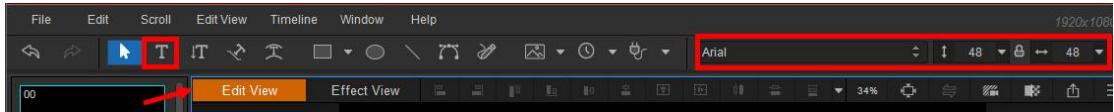

## 10.7. Create Mixed Play by Character/Line

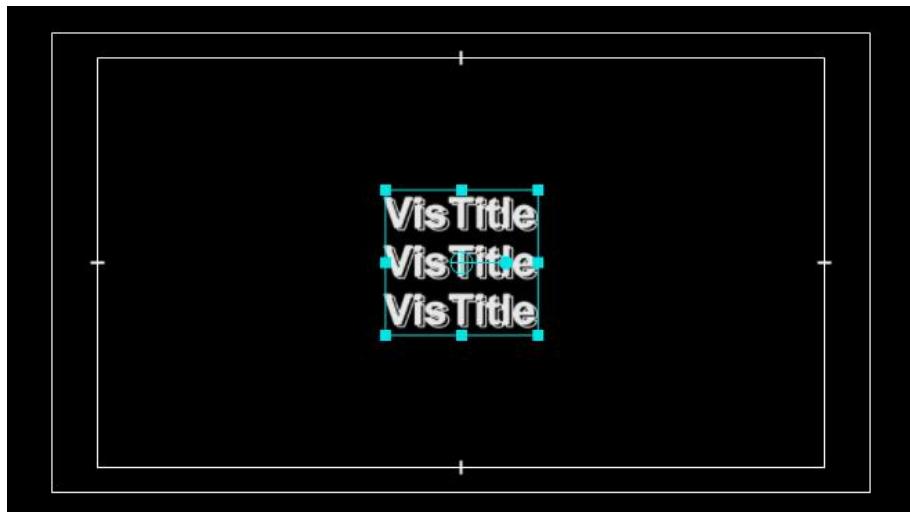

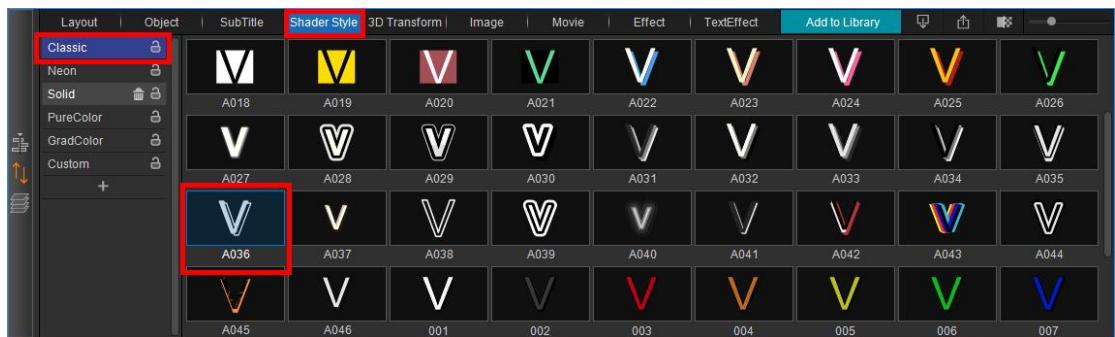

### 10.7.1. Enter Text and Shader

- 1) Using the Object Menu Bar [Text] button, enter "VisTitle", font size 48, and press "C" to centre

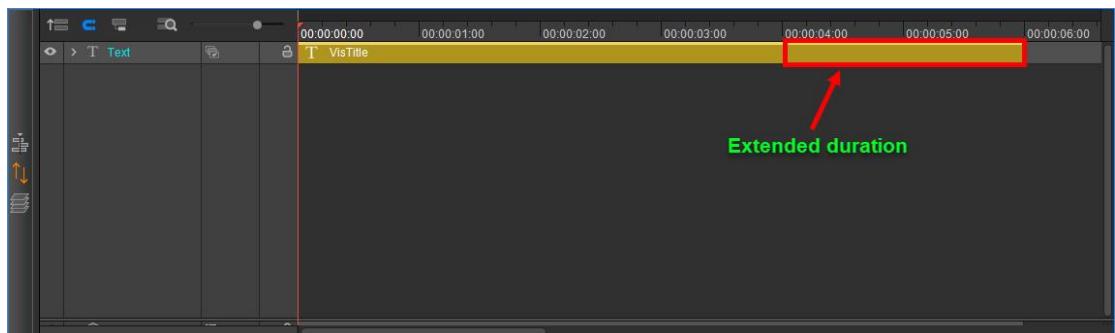

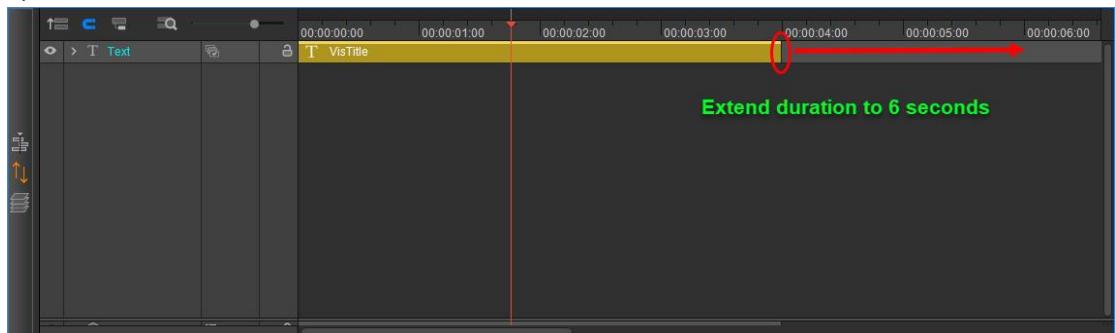

- 2) Shader: apply shader A036 from the templates library

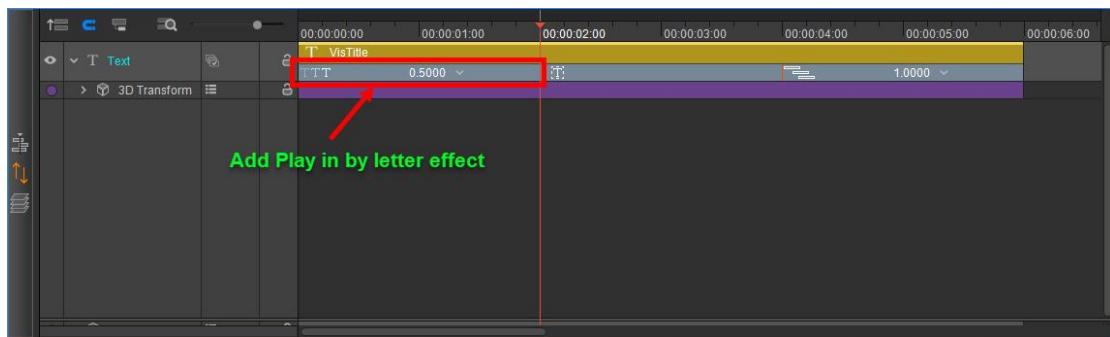

### 10.7.2. Add area

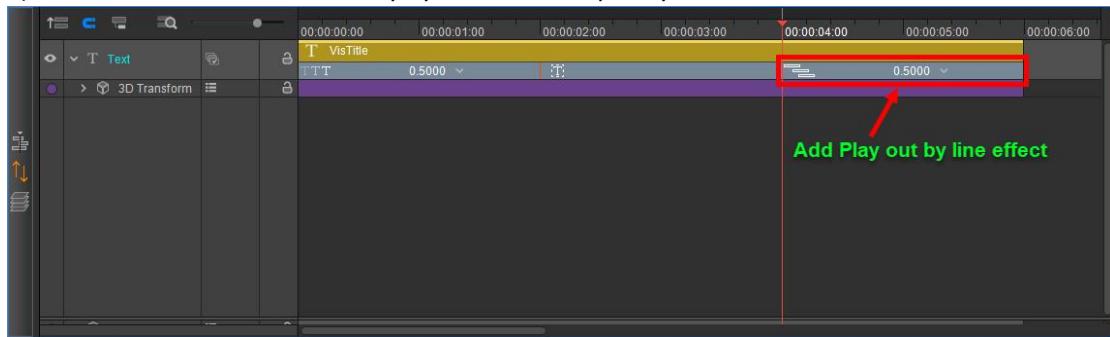

- 1) Extend duration to 6 seconds

- 2) From 0 to 2 seconds, add Play by Character area, frequency value 0.5

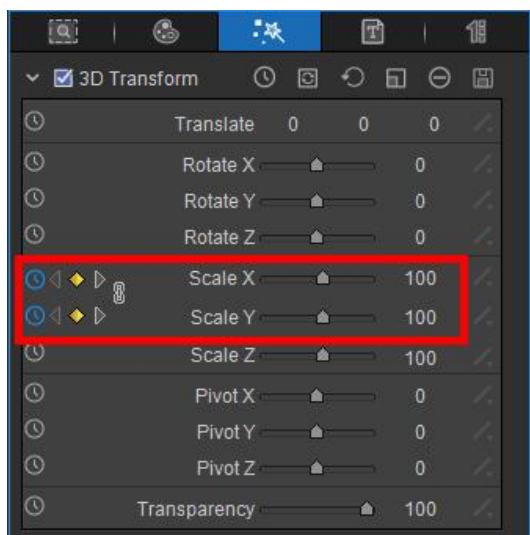

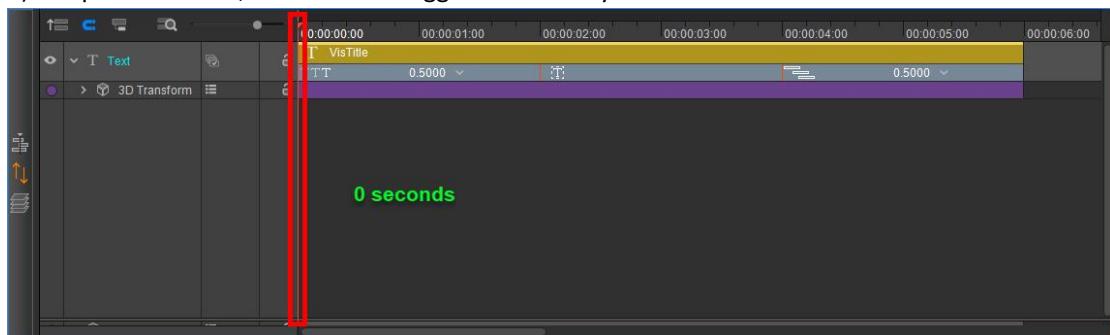

- From 4 to 6 seconds, add Play by Line area, frequency value 0.5

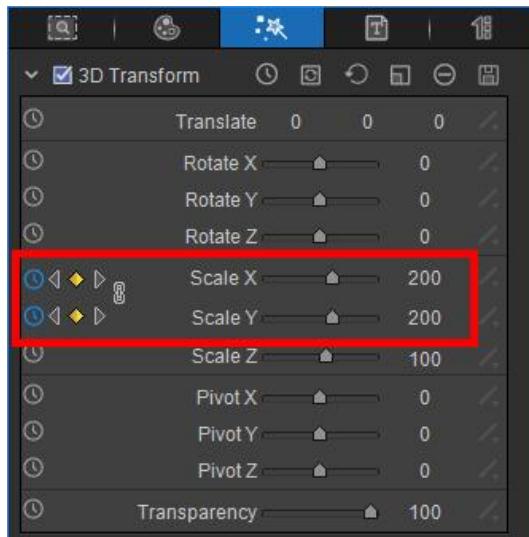

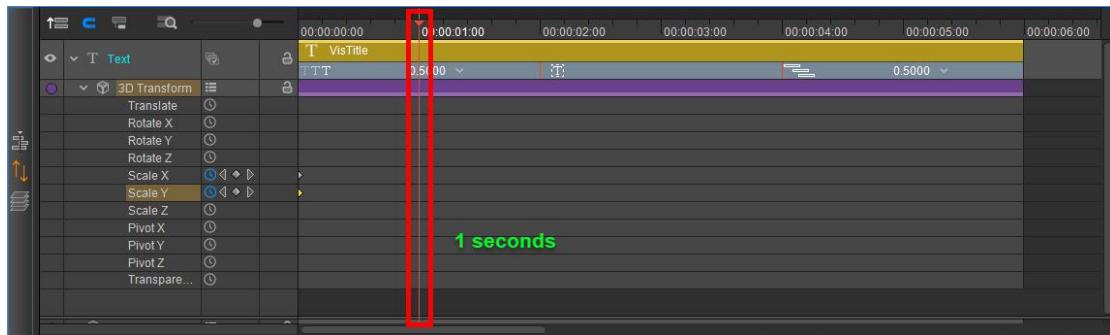

### 10.7.3. Set Keyframe in 3D Transform

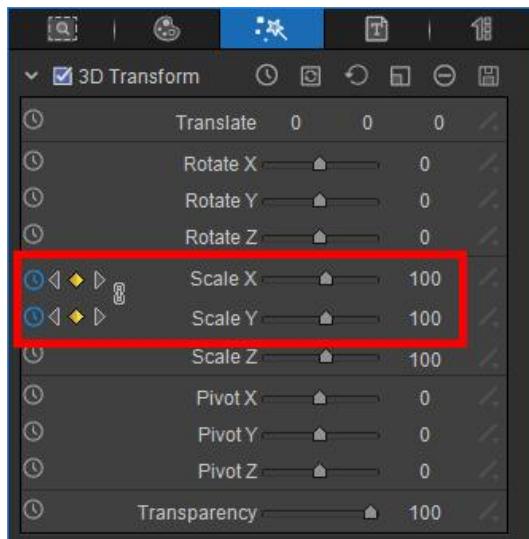

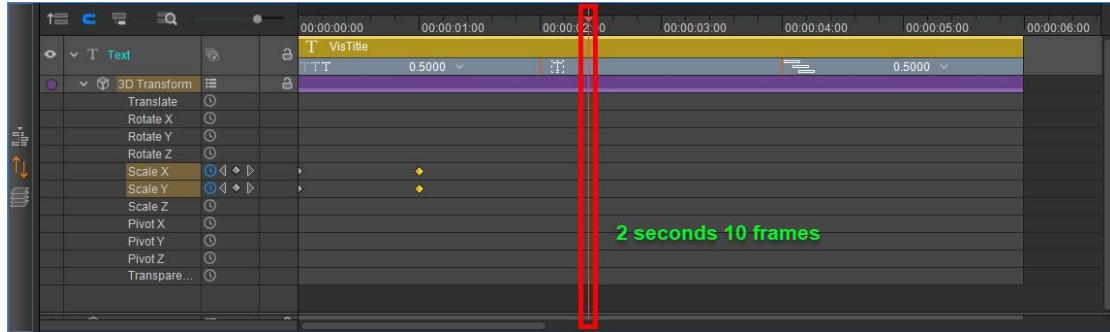

- Open Effect tab, at 0 seconds toggle XY scale keyframe to 100 each.

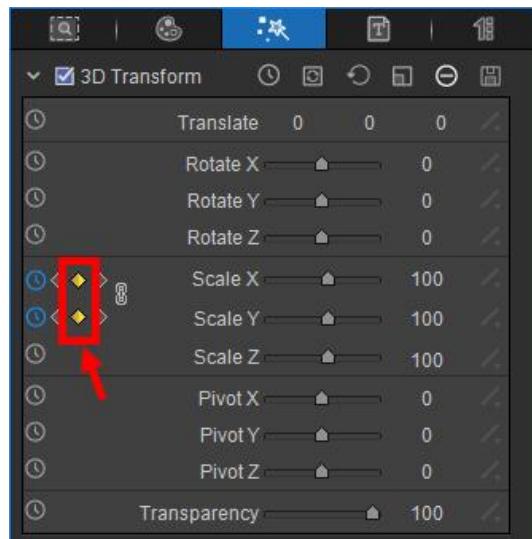

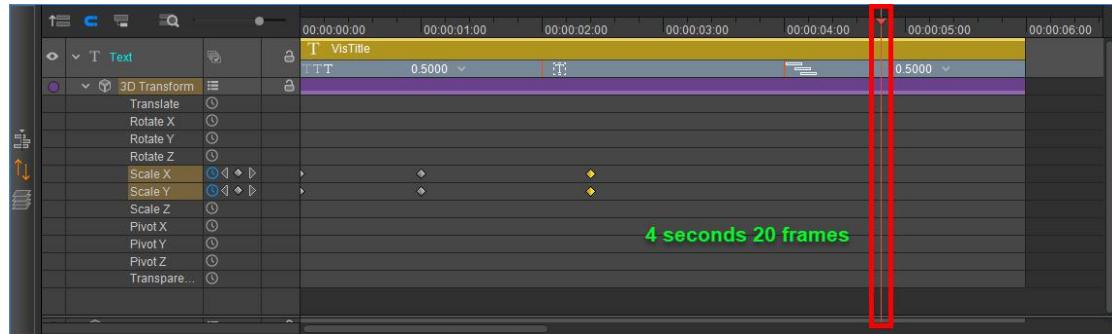

- At 1 second set XY scale keyframe to 200 each.

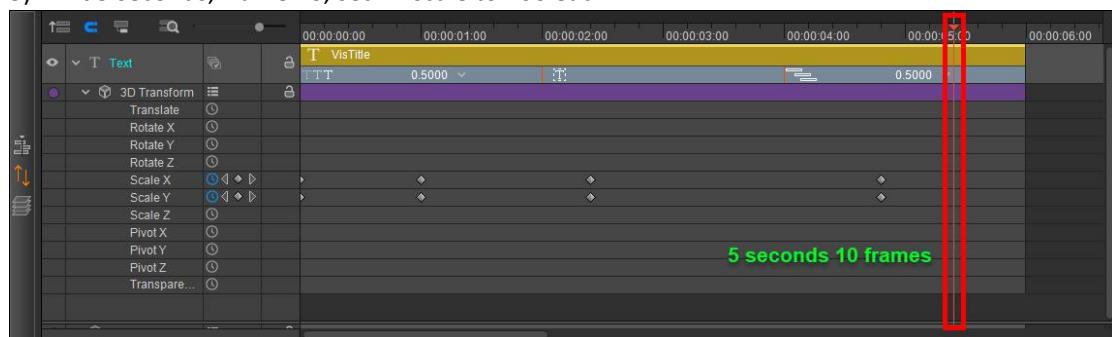

3) At 2 seconds, frame 10, set XY scale at 100 each

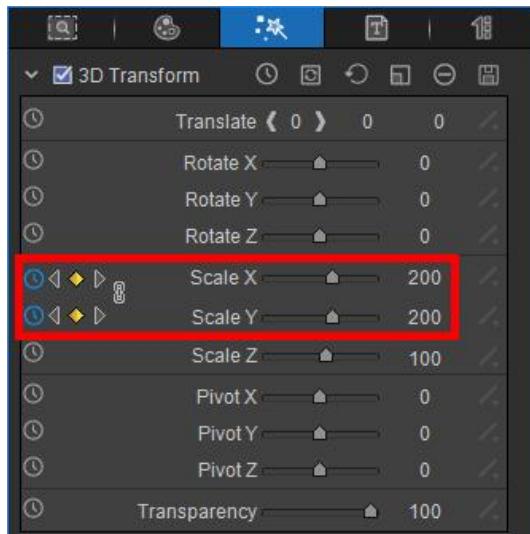

- 4) At 4 seconds, frame 20, set XY scale to current keyframe

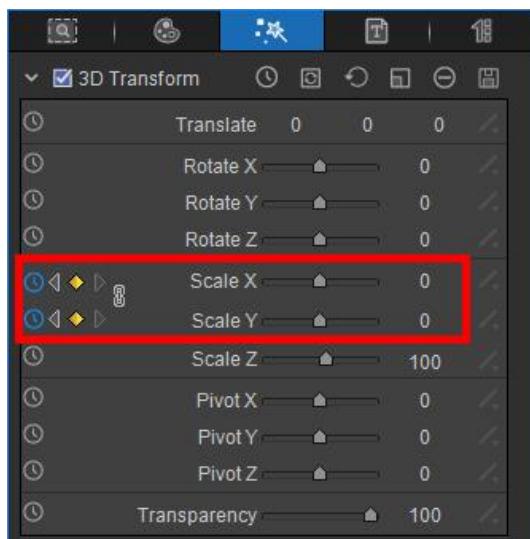

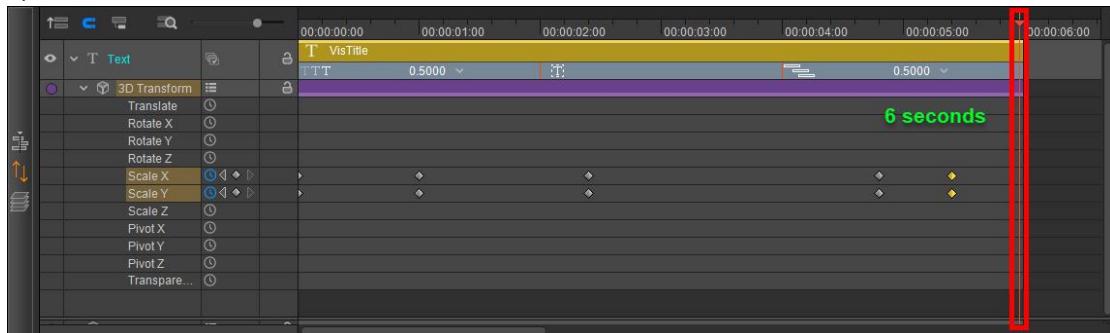

- 5) At 5 seconds, frame 10, set XY scale to 200 each

6) At 6 seconds, set XY scale to 0 each

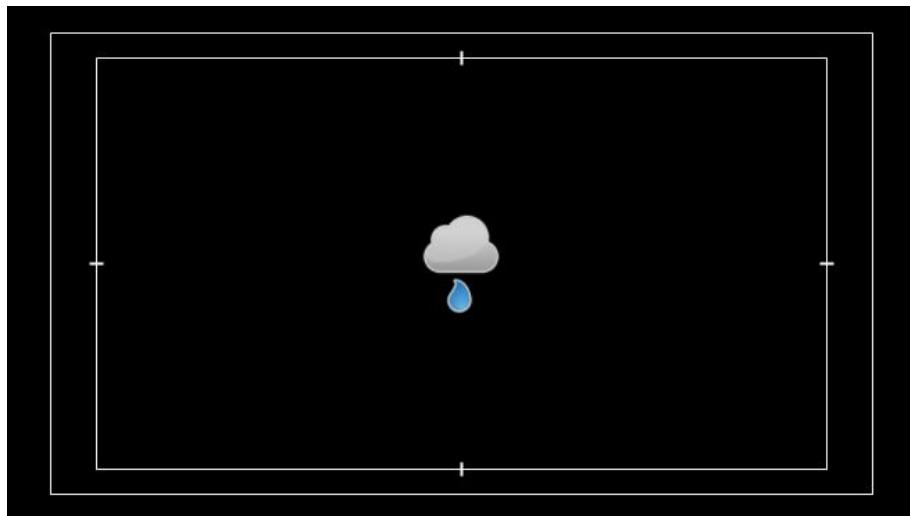

#### 10.7.4. Preview

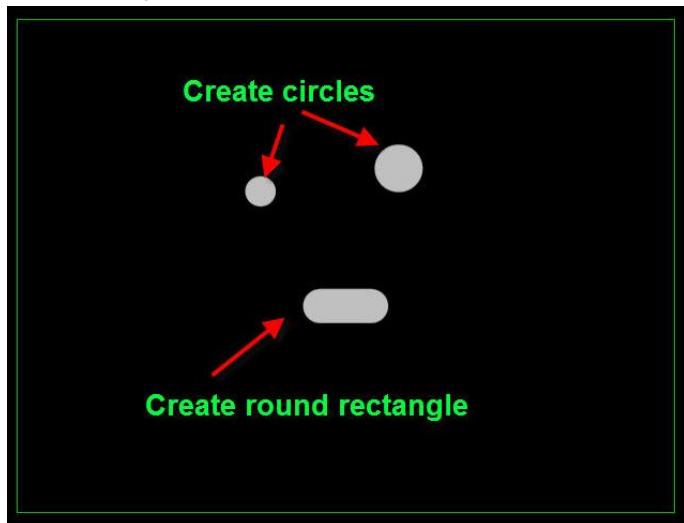

#### 10.8. Create Advanced Animation Keyframe

Raindrops Animation

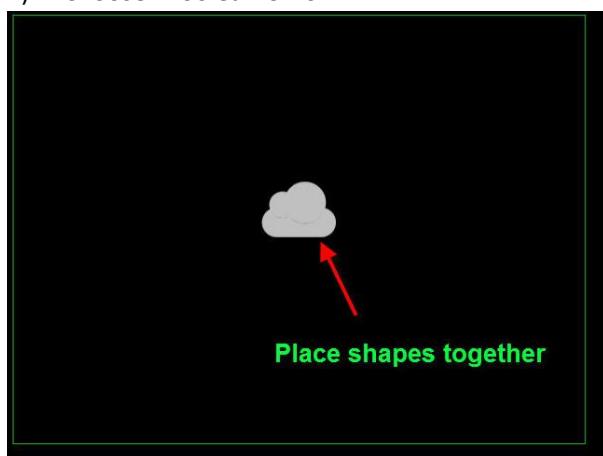

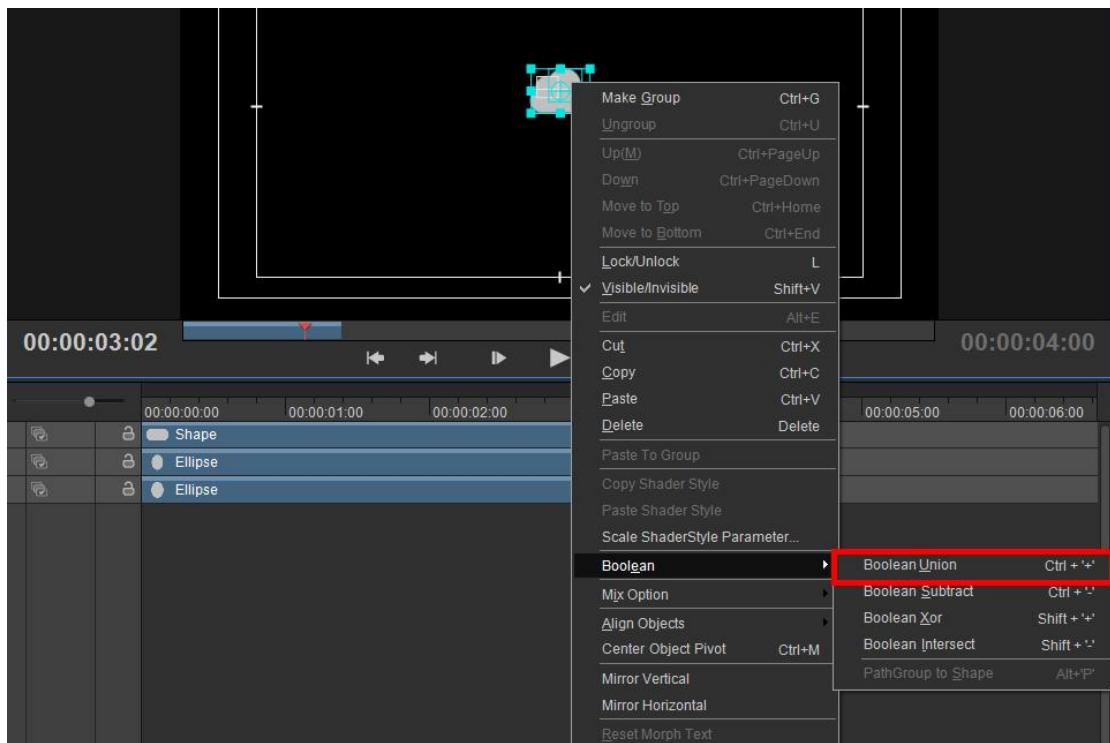

### 10.8.1. Create Cloud

- 1) Use Object Menu Bar to create circles and a round rectangle

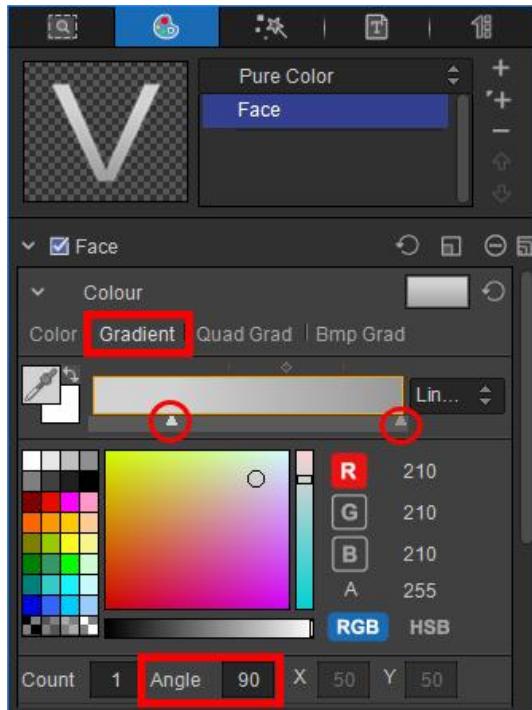

- 2) Choose “Boolean Union”

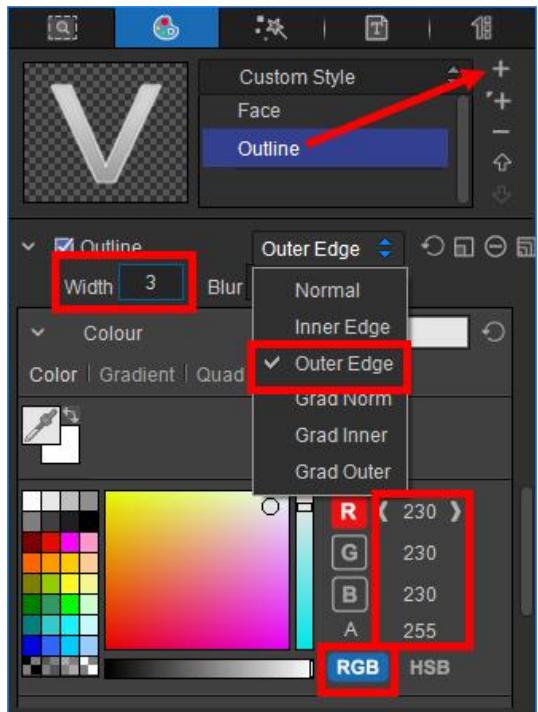

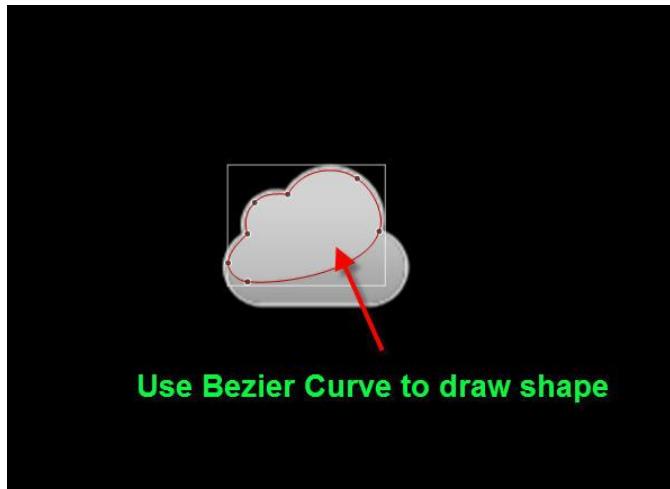

3) Set Shader: Gradient to Linear, RGB, RGBA parameters at (210,210,210,255),(152,152,152,255), 90 degrees.

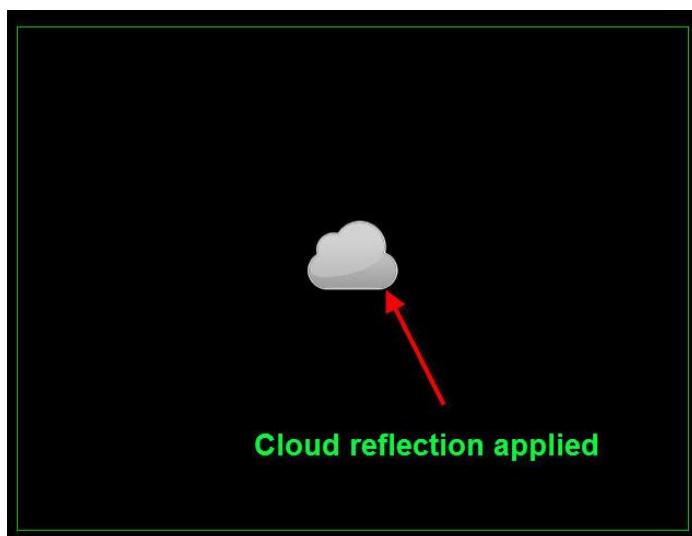

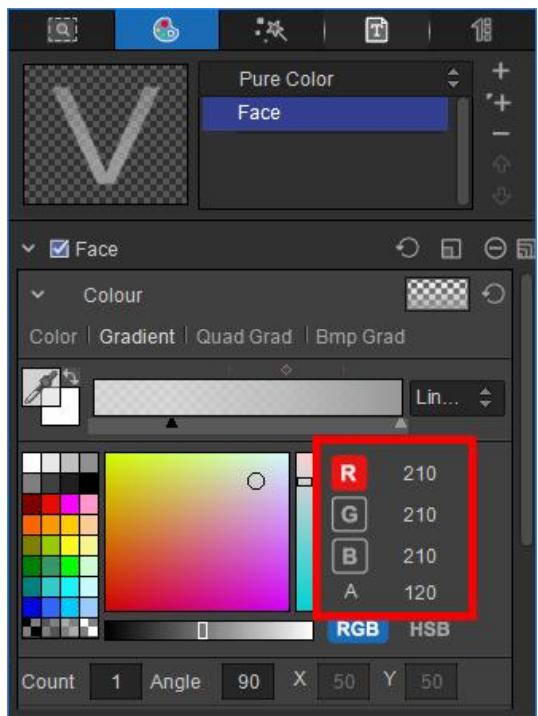

Add Edge, set to Outer Edge, Width 3, RGB, RGBA parameters at (230,230,230,255).

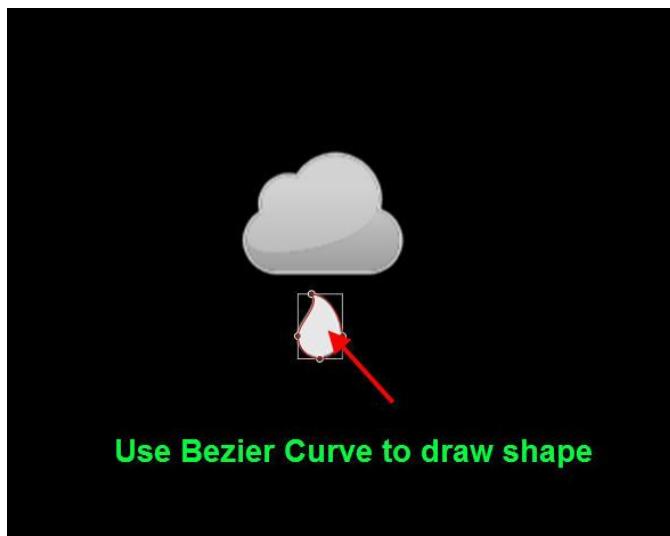

- 4) Use Bezier Curves  to add cloud reflection. Set reflection: Single color, RGB, RGBA parameters at (210,210,210,120)

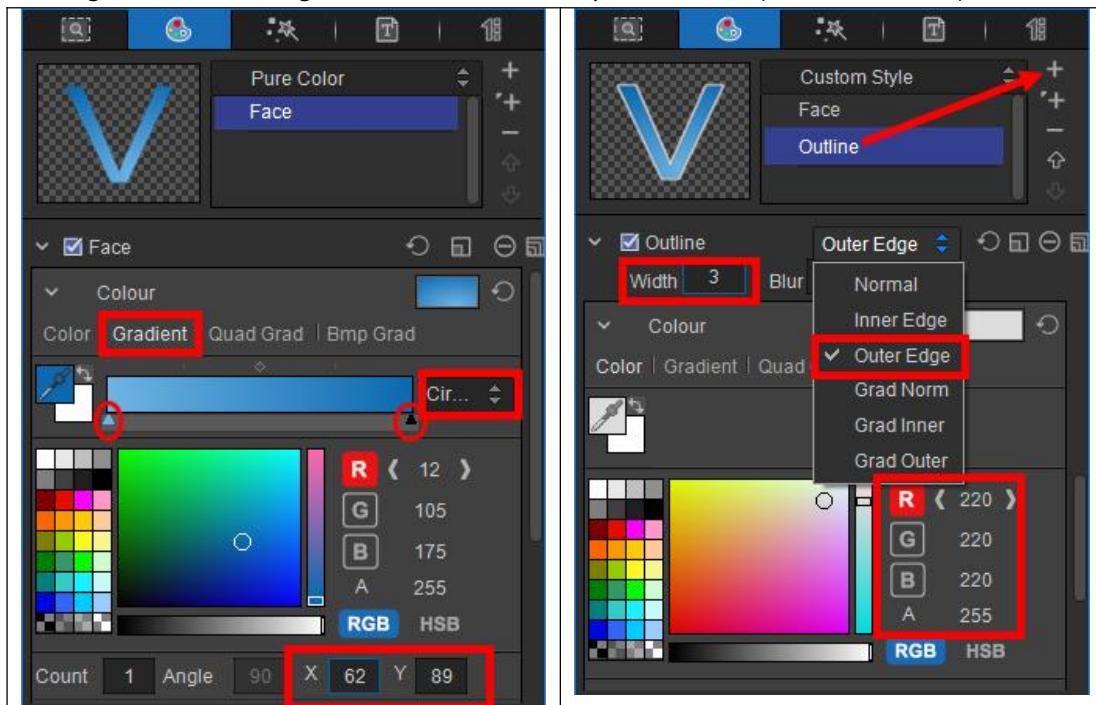

### 10.8.2. Create Raindrop

- 1) Use Bezier Curve to draw raindrop

- 2) Set Shader: Gradient to Linear, 90 degrees, XY axis to (62, 89), RGB, RGBA parameters at (110,181,227,255),(12,105,175,255).

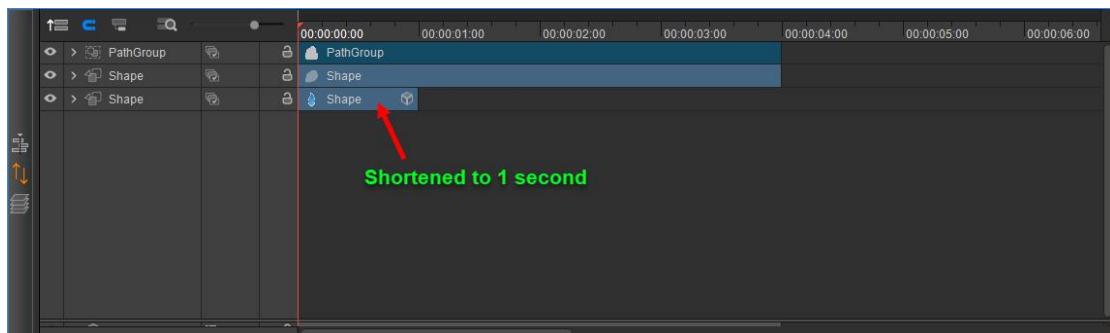

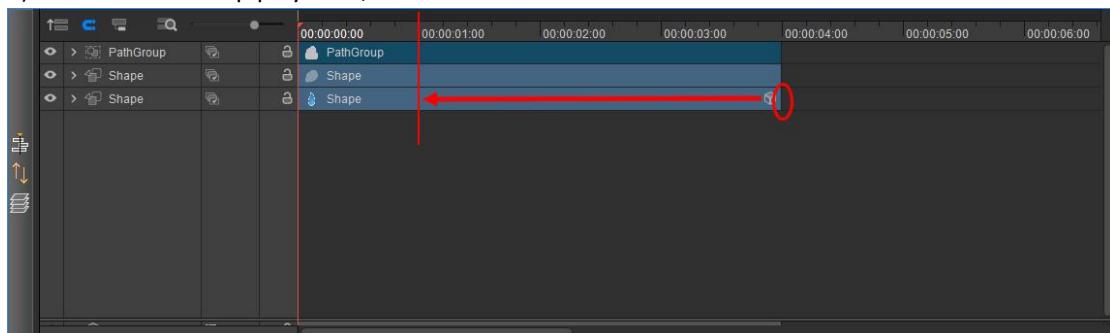

Add Edge, set to Outer Edge, Width 3, Blur 0, RGBA parameters at (220,220,220,255)

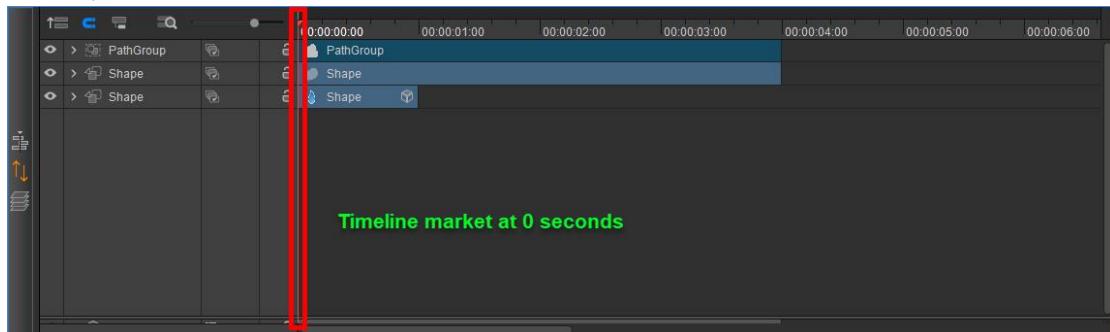

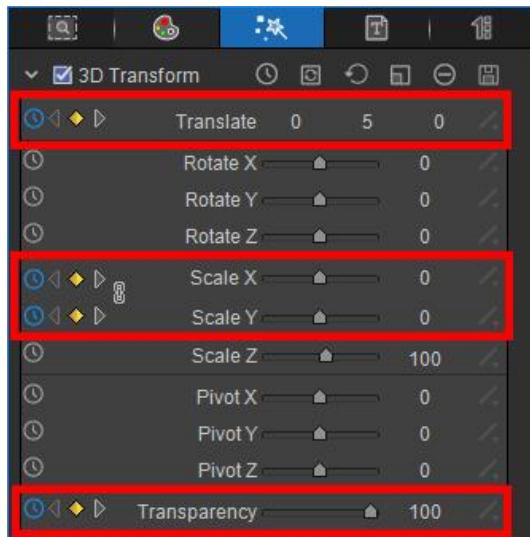

### 10.8.3. Set Raindrop Animation Keyframe

- 1) Reduce raindrop play time, from 4 seconds to 1 second

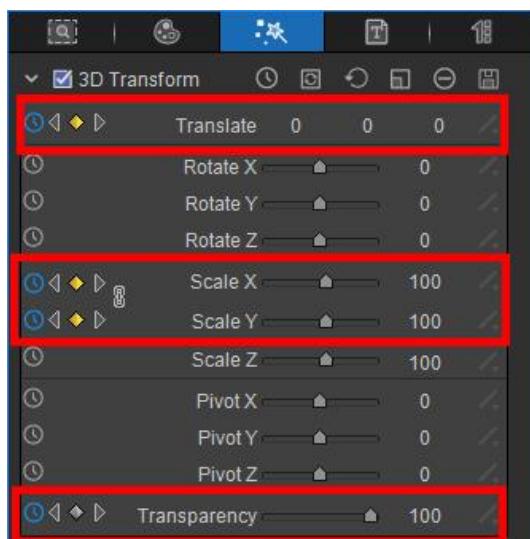

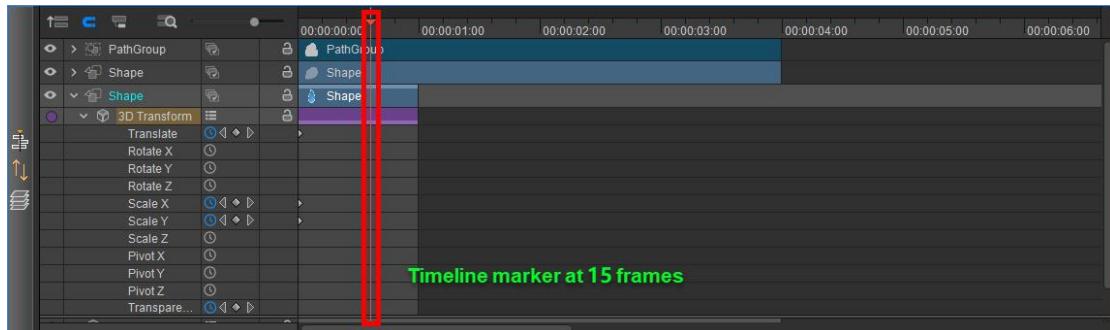

- 2) At 0 seconds, activate 3D Transform from Translate (0,5,0), XY scale (0,0), and Transparency (100) keyframes.

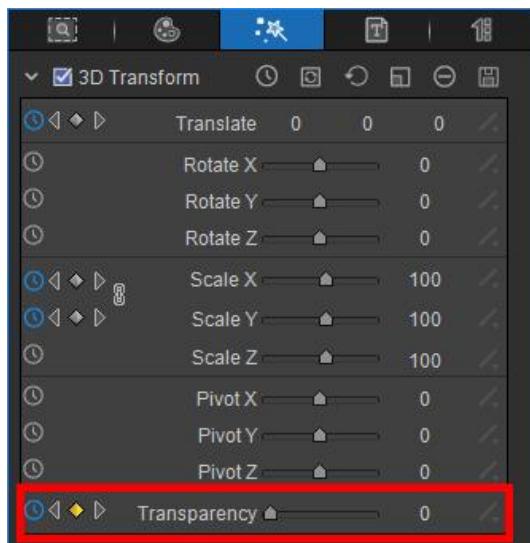

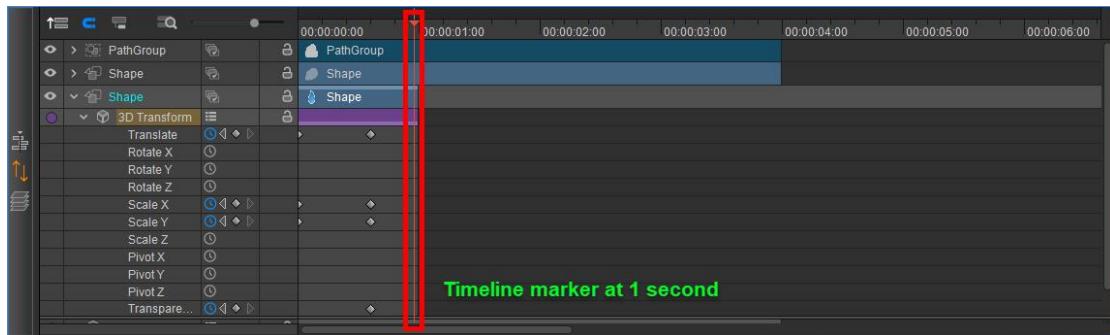

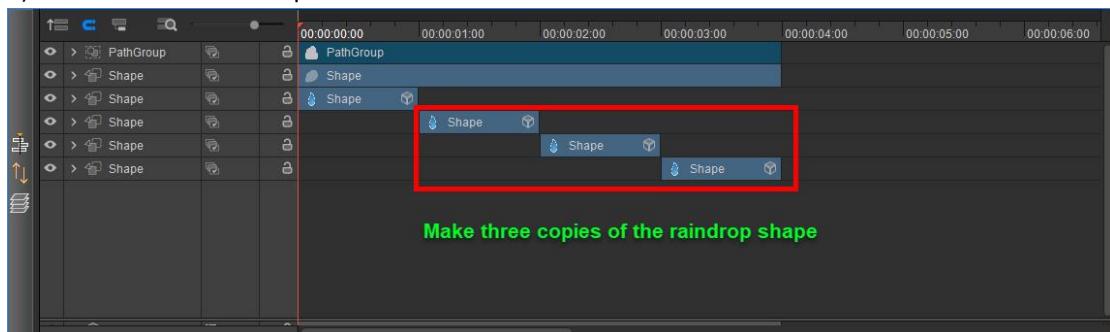

- 3) Drag timeline marker to frame 15, then set Translate (0,0,0), XY scale (100,100), and Transparency (add current) keyframes.

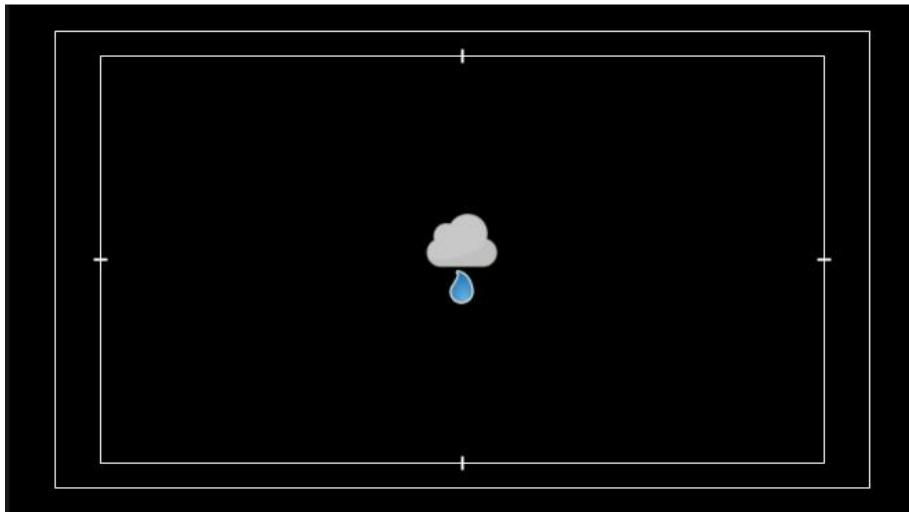

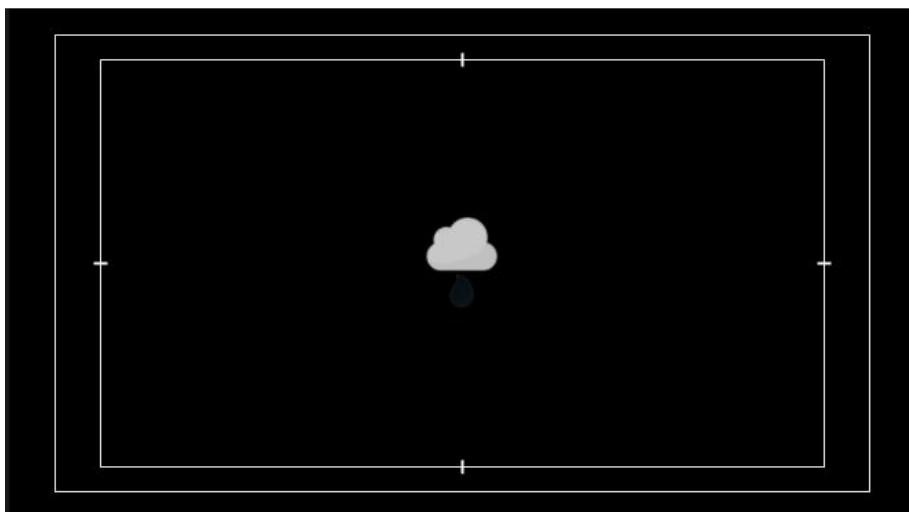

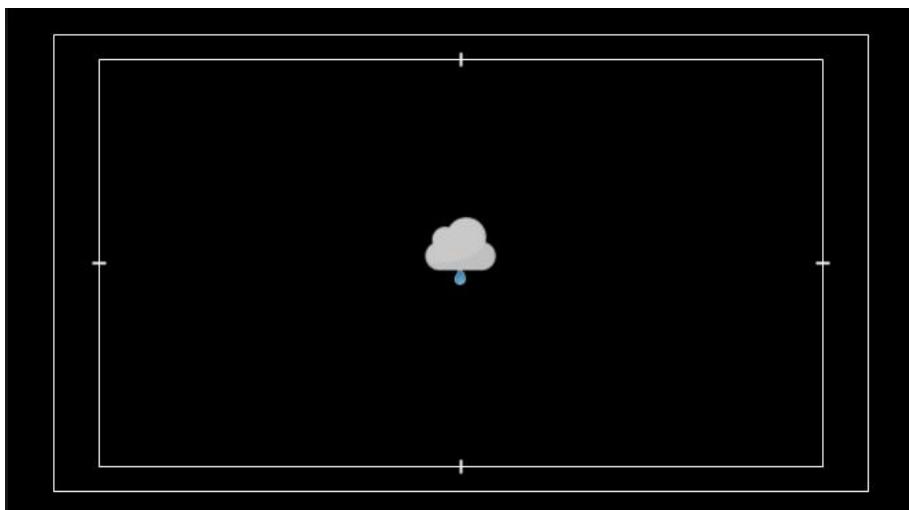

- 4) Drag timeline marker to 1 second, set Transparency to 0

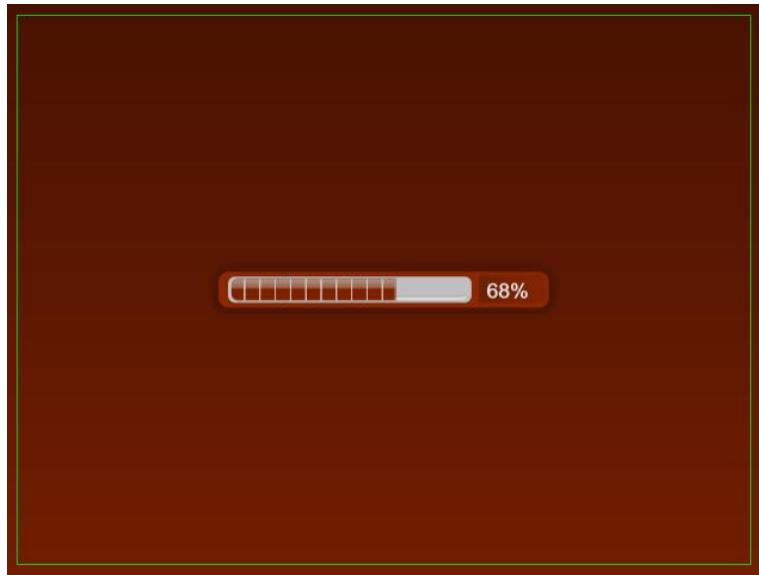

5) Make three more copies to create rainfall effect

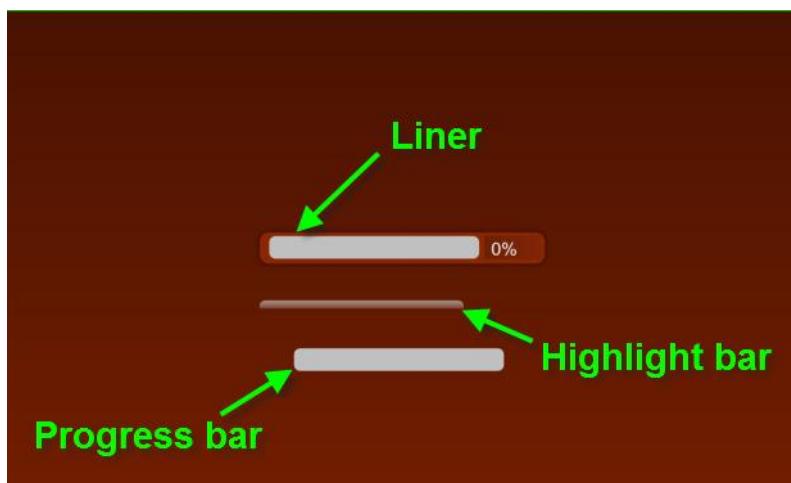

#### 10.8.4. Preview

## 10.9. Create Progress Bar

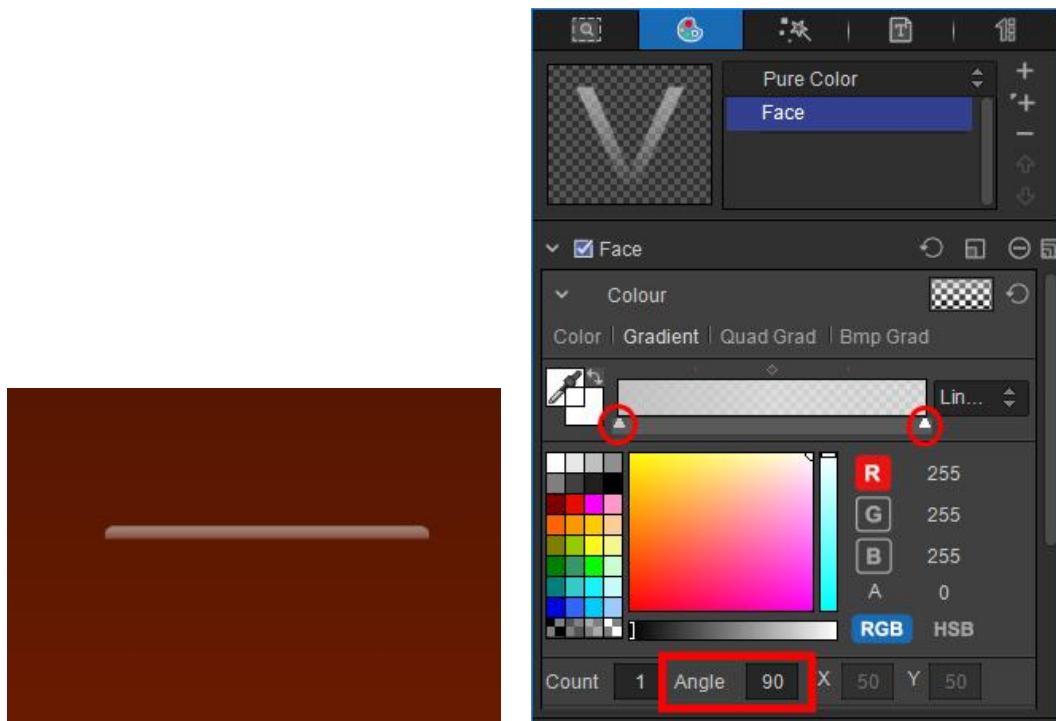

### 10.9.1. Liner

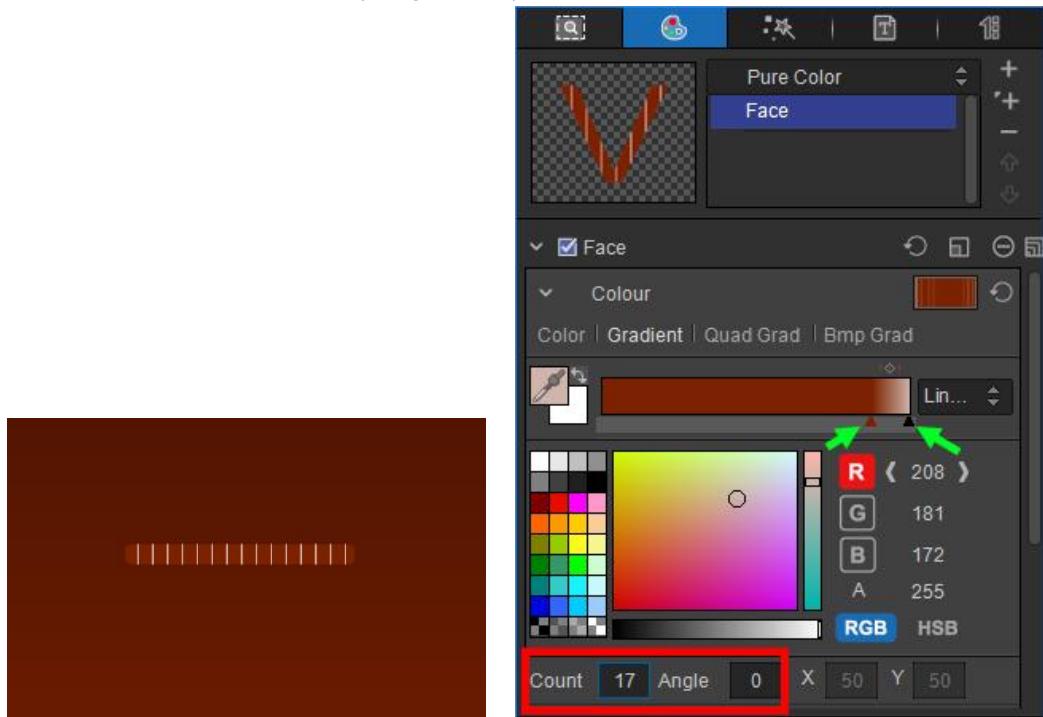

### 10.9.2. Color

- 1) Select the progress bar high-light, select gradient, 90 degrees, with the RGBA values at (188,188,188,200), (255,255,255,0).

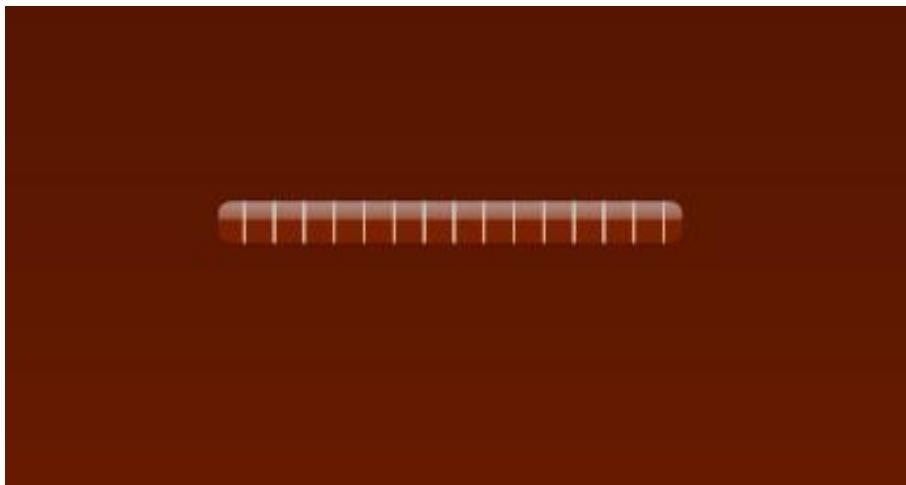

- 2) Select the progress bar, select gradient, set RGBA values at (125,34,0,255), (208,181,172,255), and adjust gradient position to 17.

### 10.9.3. Merge progress bar and high-light

- 1) Click on create group, then name group

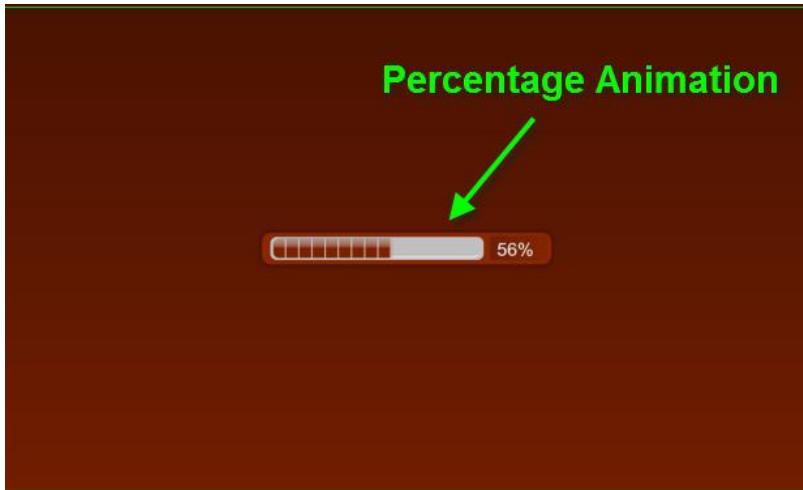

- 2) Create Animation: select the group, choose template Wipe001. Click to add special effects such as equal length, feather level 2.

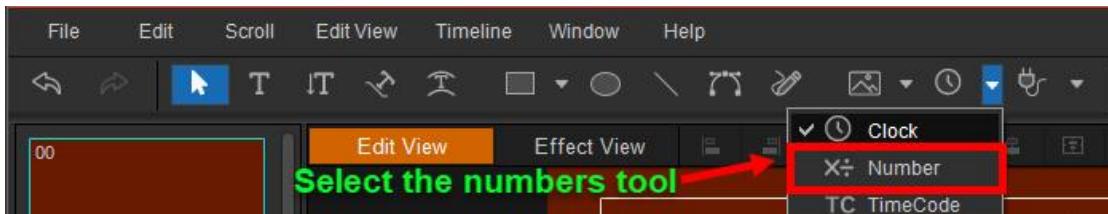

Select this template, then click on,

Equal length effect

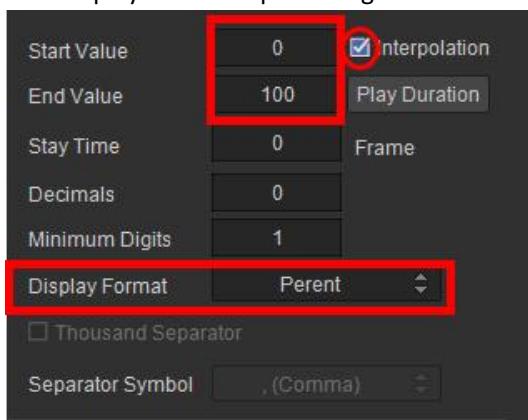

#### 10.9.4. Percentage Animation

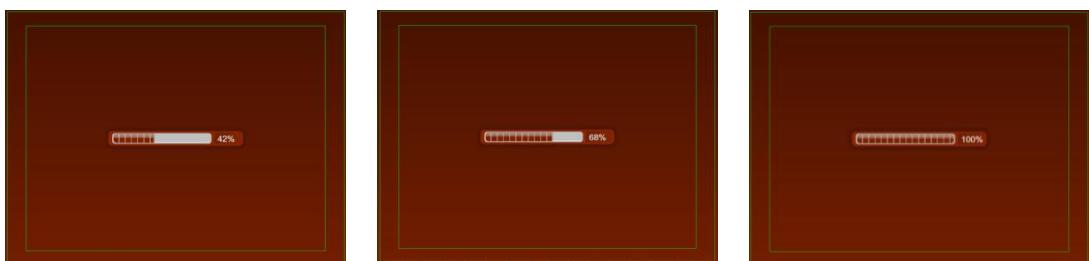

- 1) Select the numbers tool, set size to 17, RGBA to (232,232,232,255)

- 2) Set digital animation: Check the key frame interpolation, start value 0, end value 100, the display format to percentages.

#### 10.9.5. Preview Animation

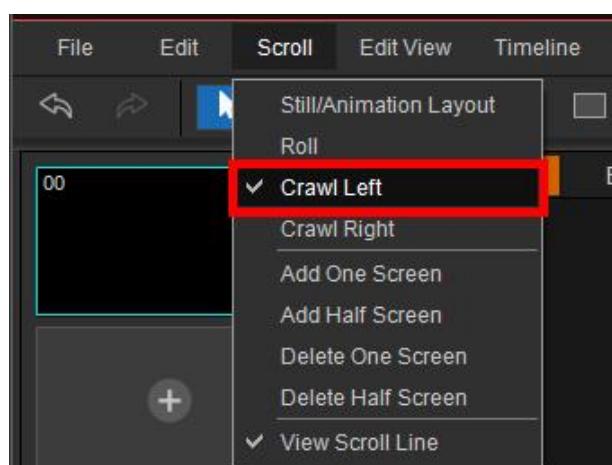

## 10.10. Create Roll Up

Please consult the chapter "Create Roll" for instructions.

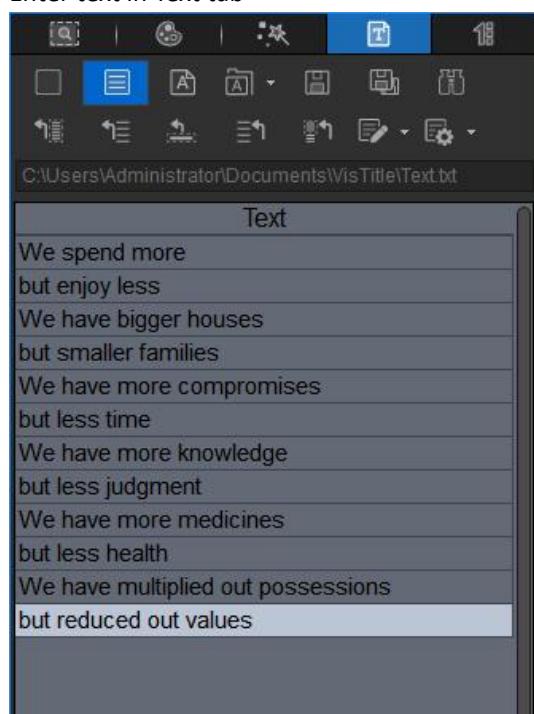

## 10.11. Create Crawl

### 10.11.1. Crawl Left

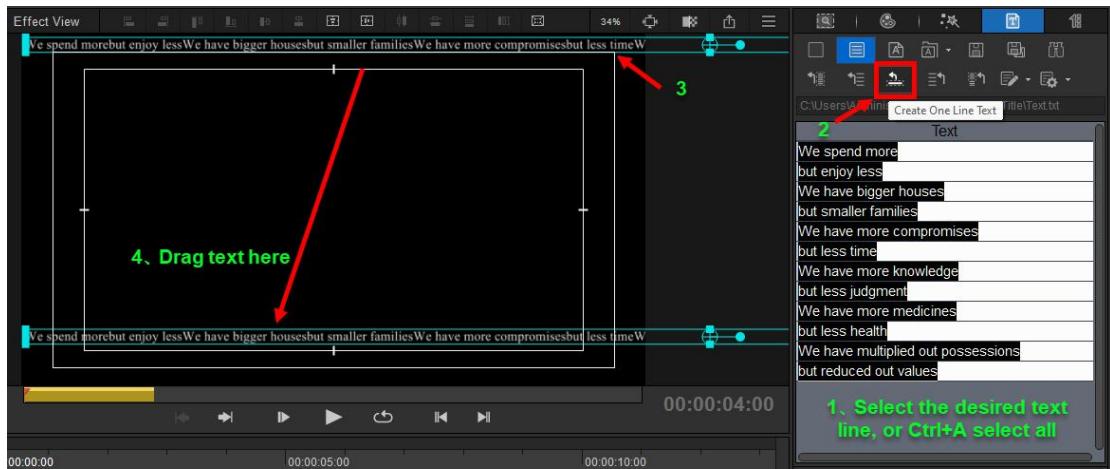

### 10.11.2. Create Text

Enter text in Text tab

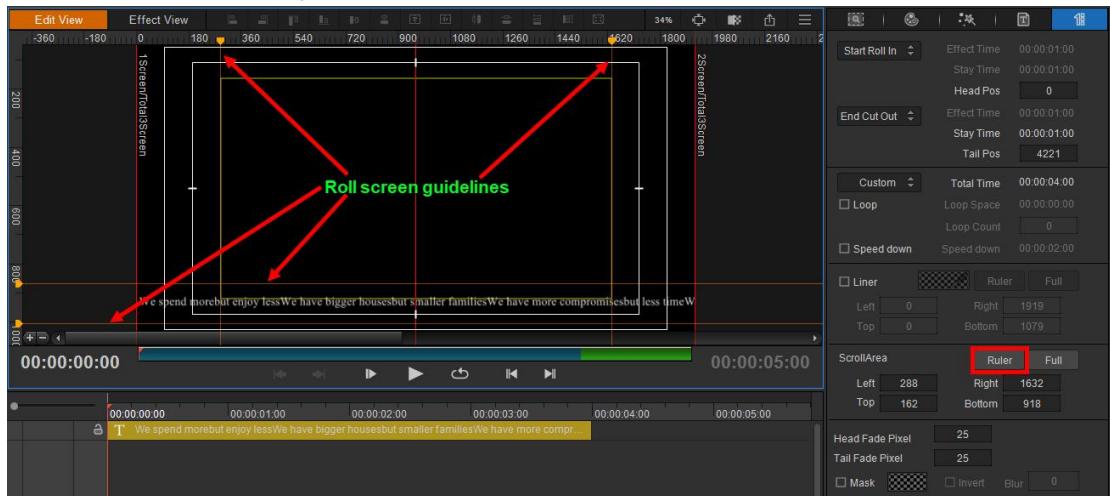

Click on [One Line Text] to create in Edit Screen

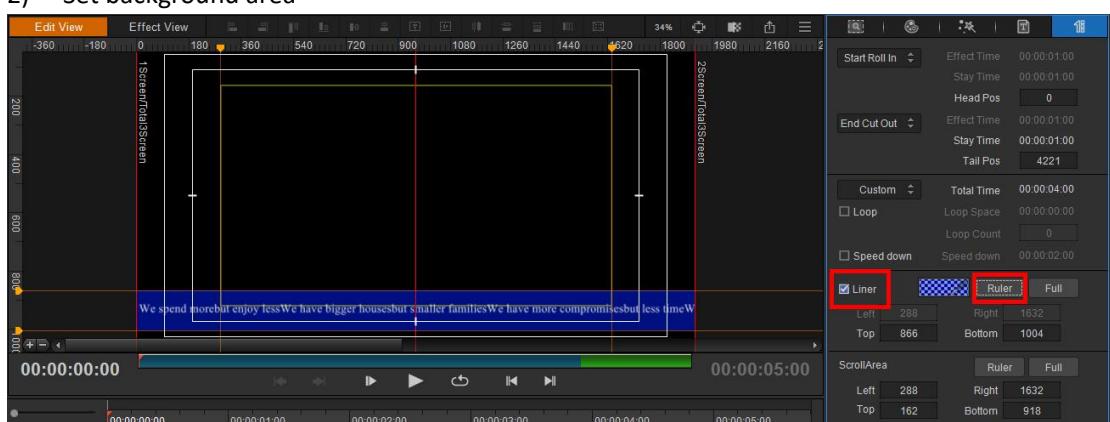

### 10.11.3. Set Parameters

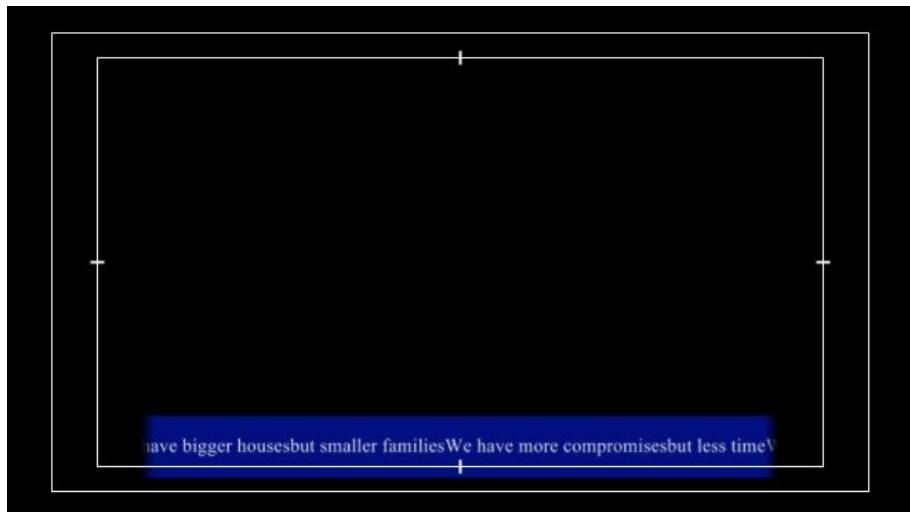

1) Use the ruler (Tab key) to set roll area

2) Set background area

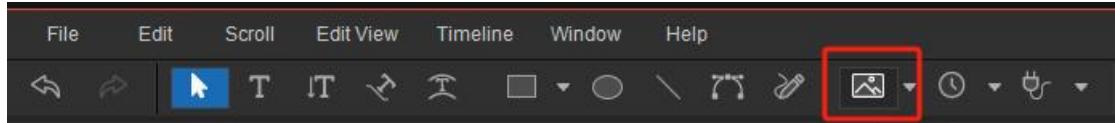

3) Example

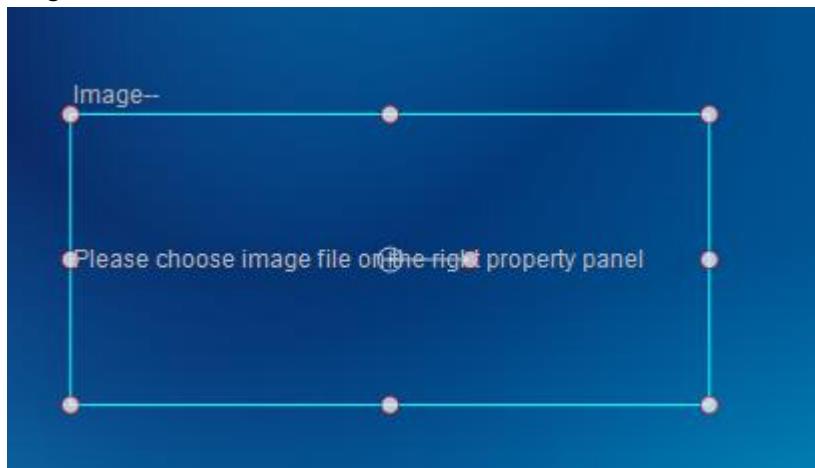

## 10.12. Render Image

### 1. Create Image

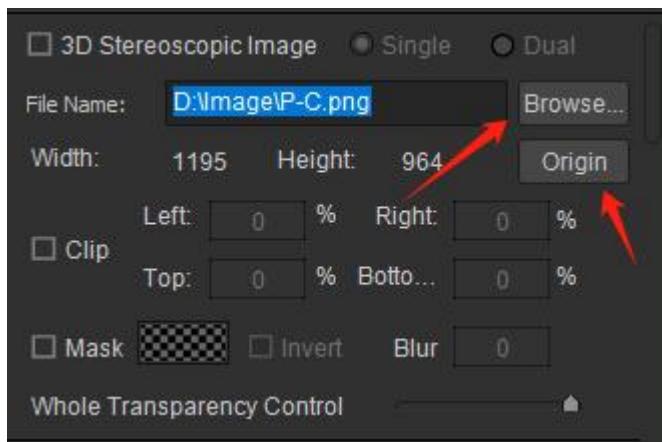

In the Object menu bar press the button .

Drag cursor then release.

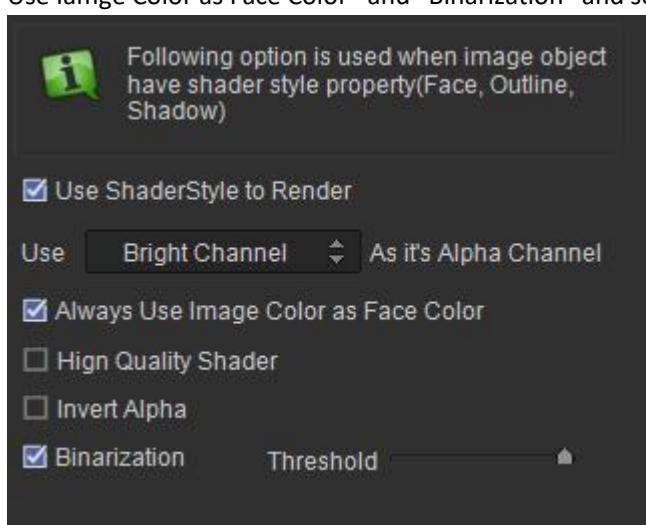

Select image file in Property tab.

## 2. Set Parameters

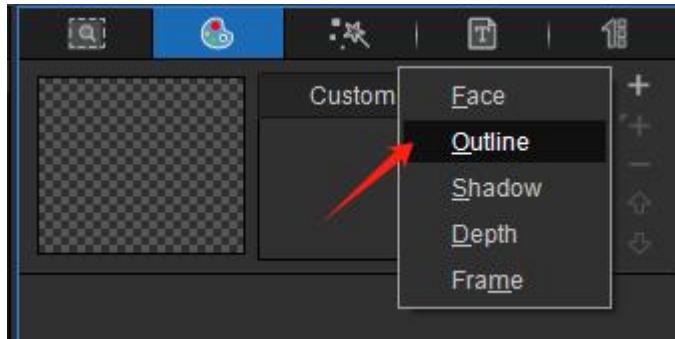

Check “Use Shaderstyle to Render” and use “Bright Channel” as Alpha channel. Enable “Always Use Image Color as Face Color” and “Binarization” and set Threshold value.

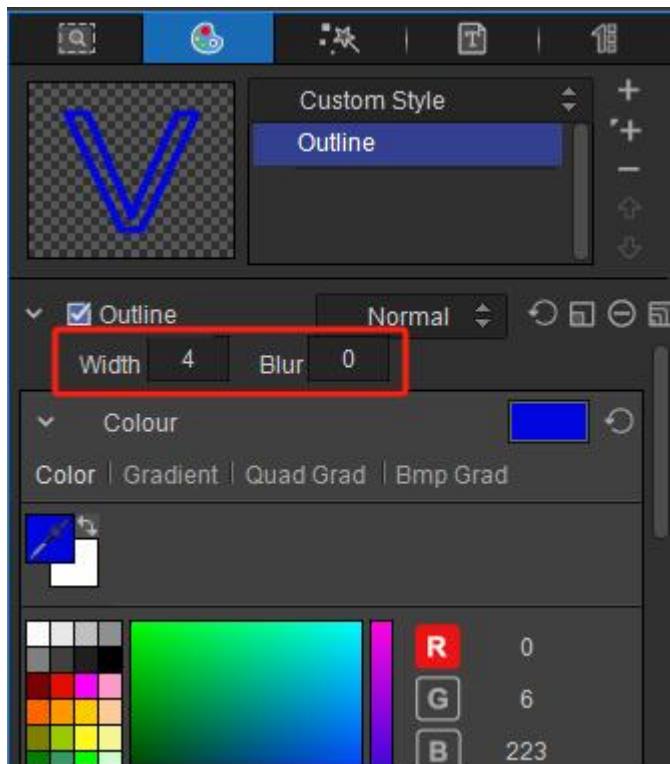

## 3. Add Face, Outline, Shadow

### Add Outline

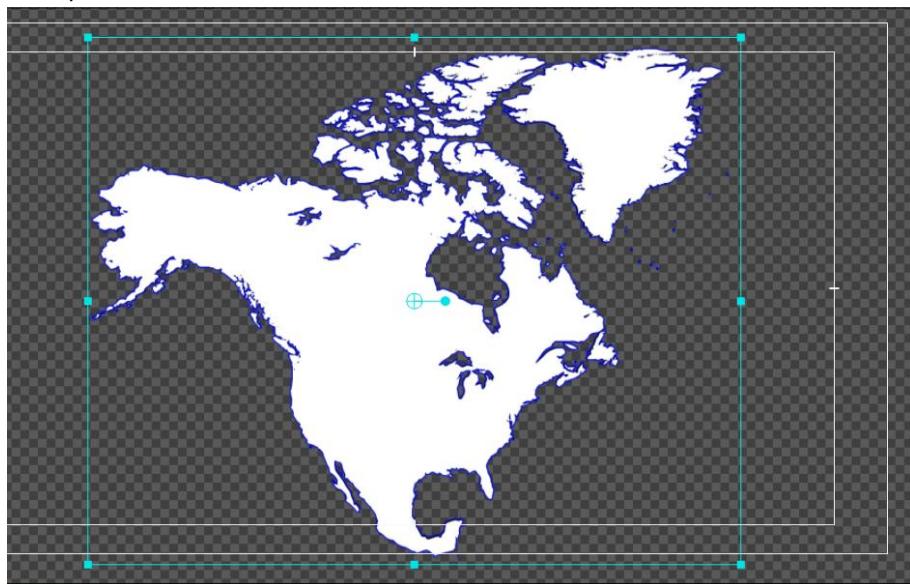

Click the “Add” button to add an outline in Shader tab.

Set color and width, Blur value as 4, 0.

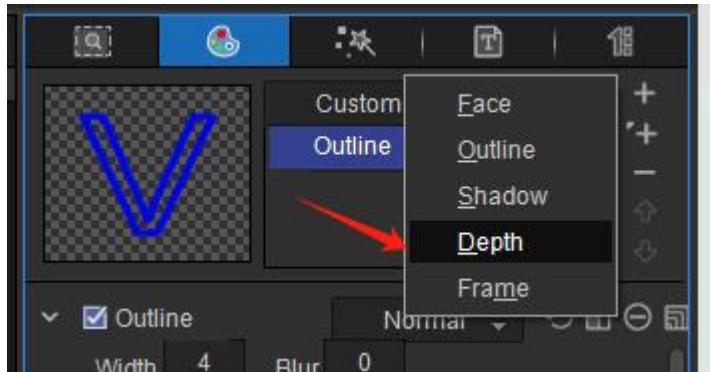

Example:

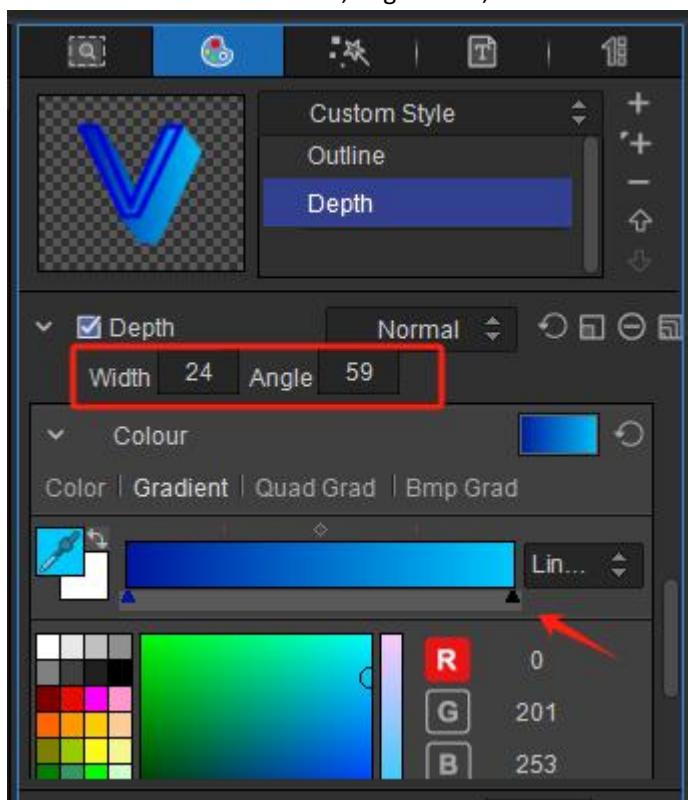

**Add Depth**

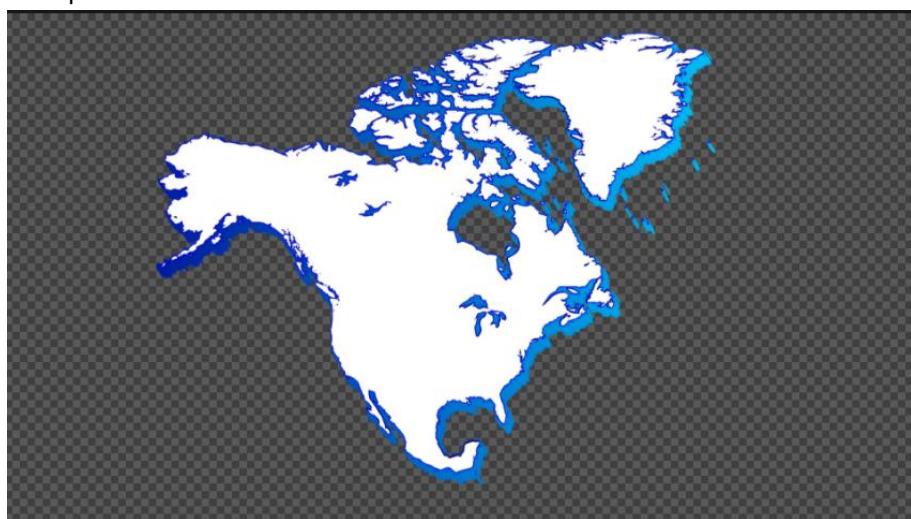

Click the “Add” button to add a depth.

Select Gradient and set width, angle as 24, 59.

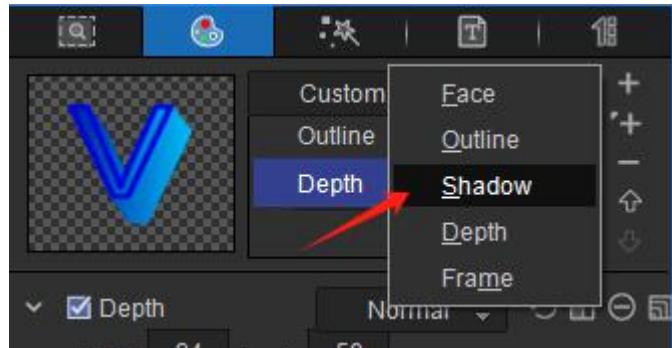

Example:

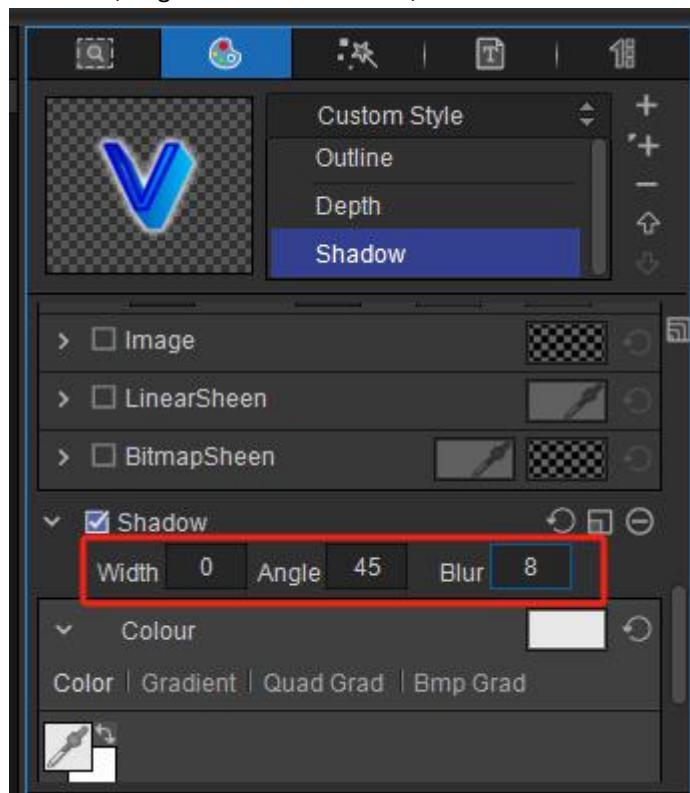

Add Shadow

Click the “Add” button to add a shadow.

Set width, angle and Blur value as 0, 45 and 8.

Example:

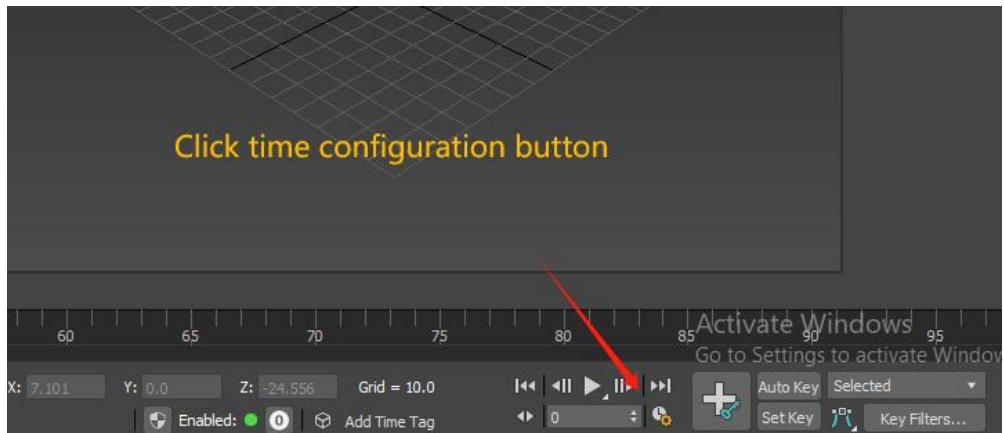

4. Preview

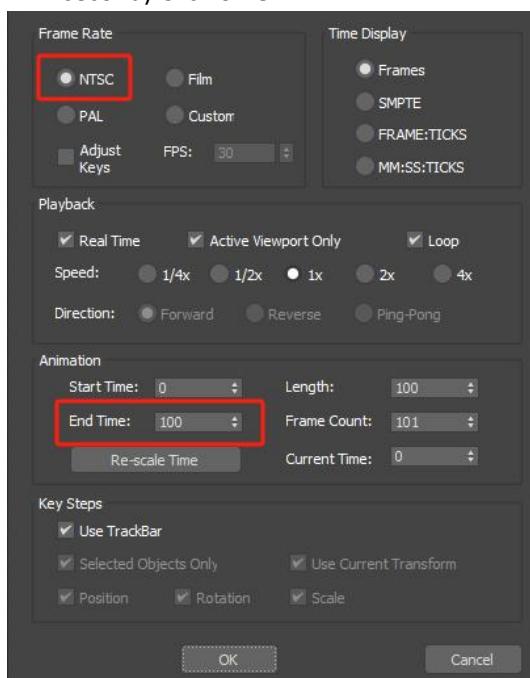

## 10.13. Using 3ds max animation in VisTitle

### 10.13.1. Set Frame Rate and Time

- 1) Click [Time Configuration] 

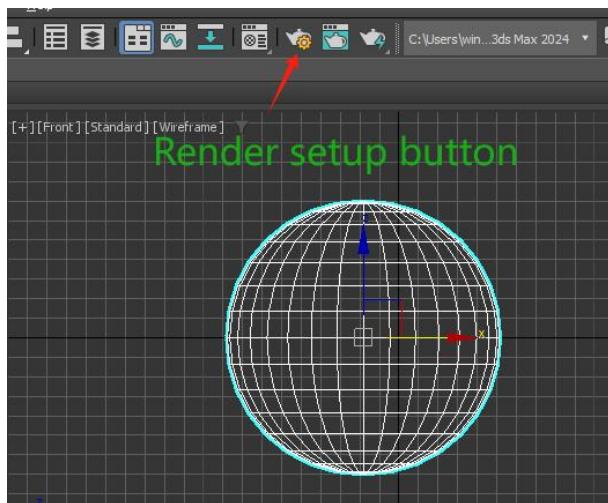

- 2) In "Frame Rate" select PAL, and in "Animation" enter End Time (25 frames equals 1 second). Click on OK.

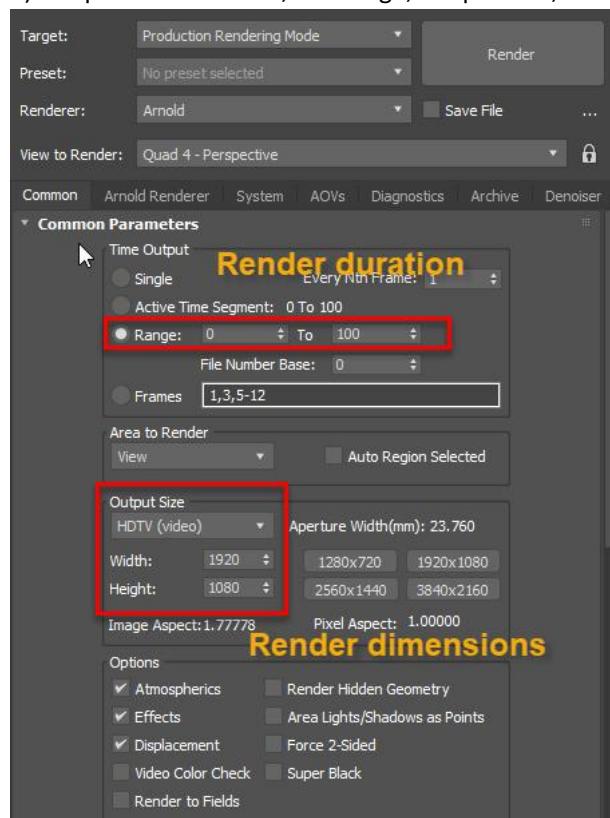

### 10.13.2. Render Setting

- 1) Click [Render setup]

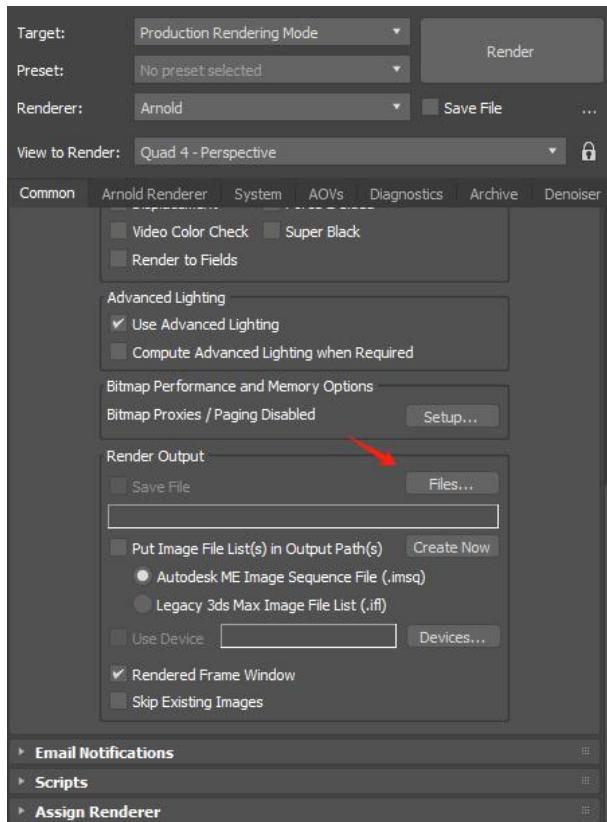

2) Open Common tab, set Range, Output Size, and activate Render to Fields.

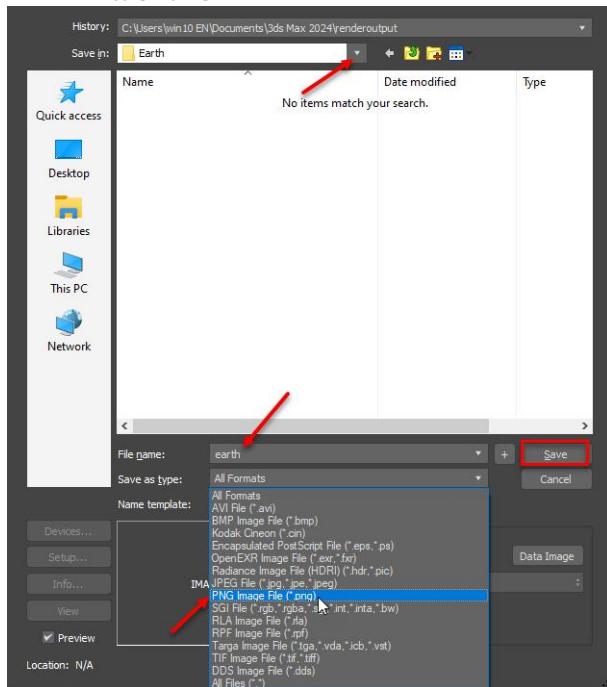

### 10.13.3. Save Setting

1) In the Render Scene diaolge window, click Files under Render Output.

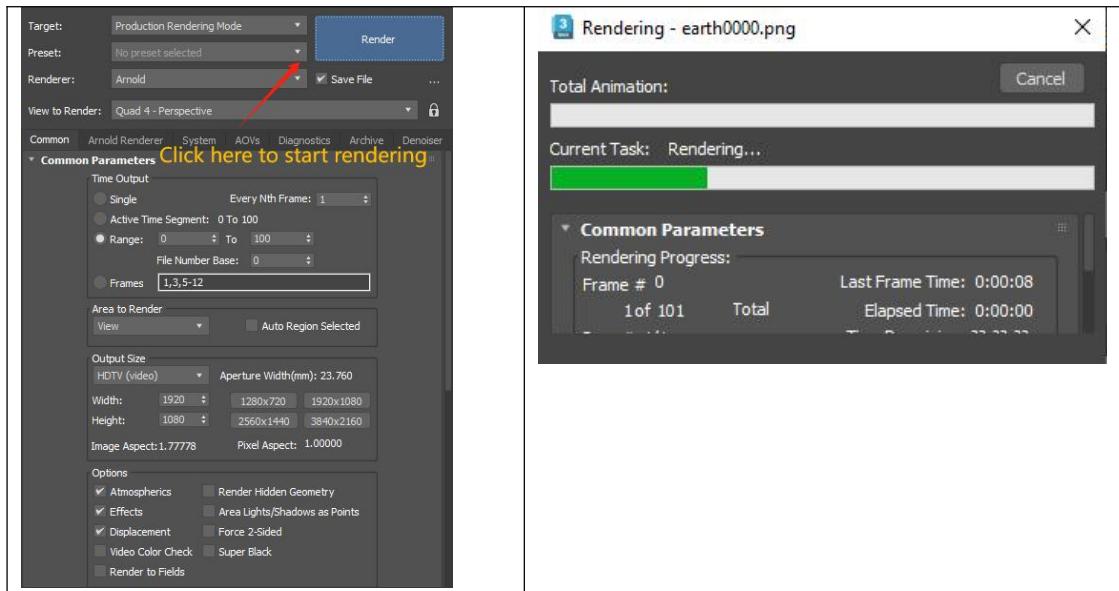

- 2) In Save As, enter Render Output File name, save as png Image File. (Here, .tga files are used, but .jpg, .png files can also be used).

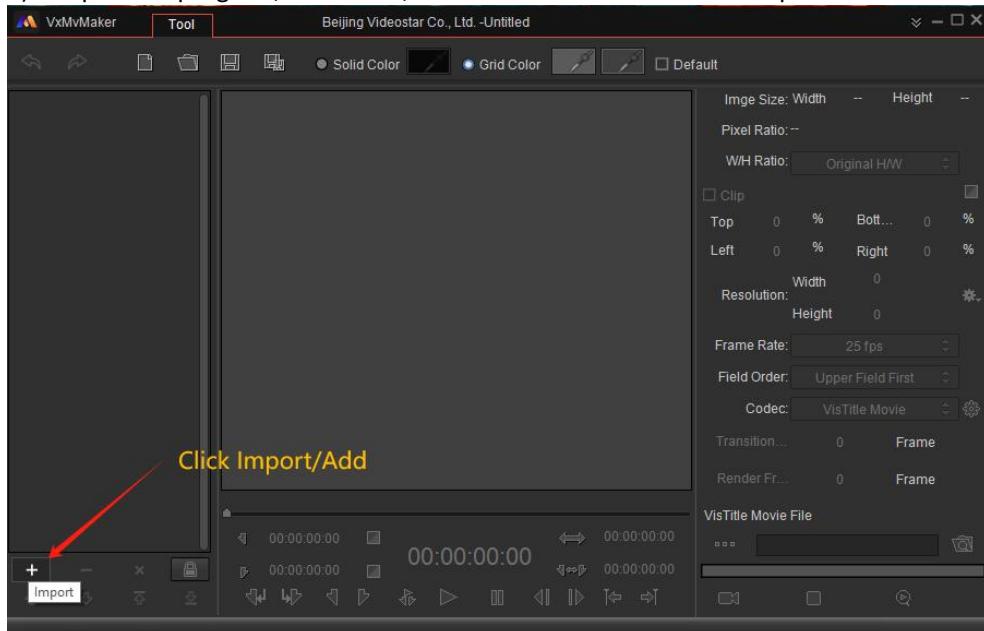

#### 10.13.4. Render Animation

In the Render dialog window, click on [Render] button.

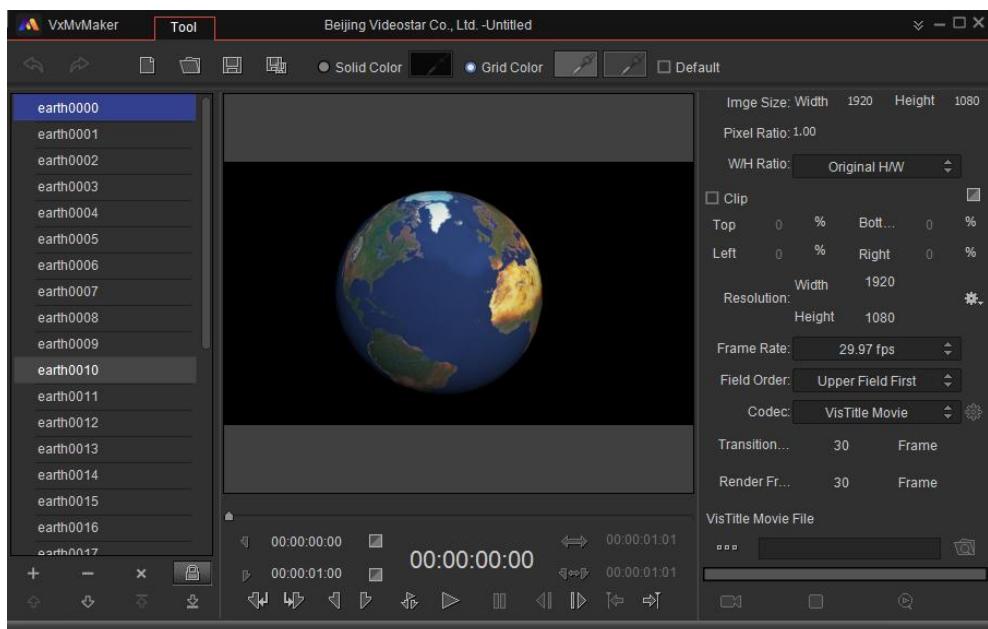

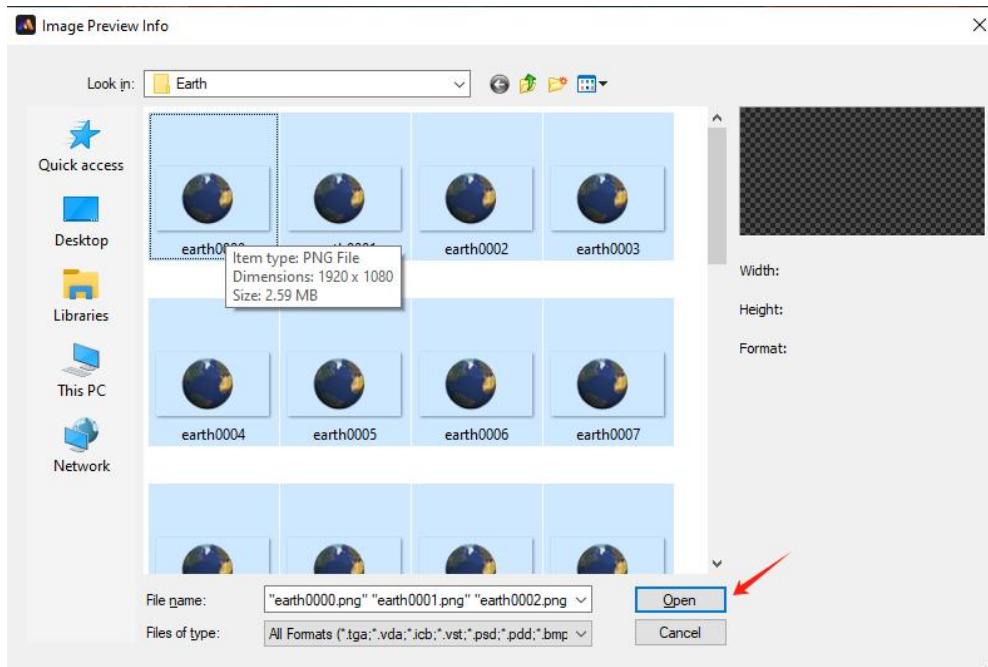

## 10.13.5. Change Format

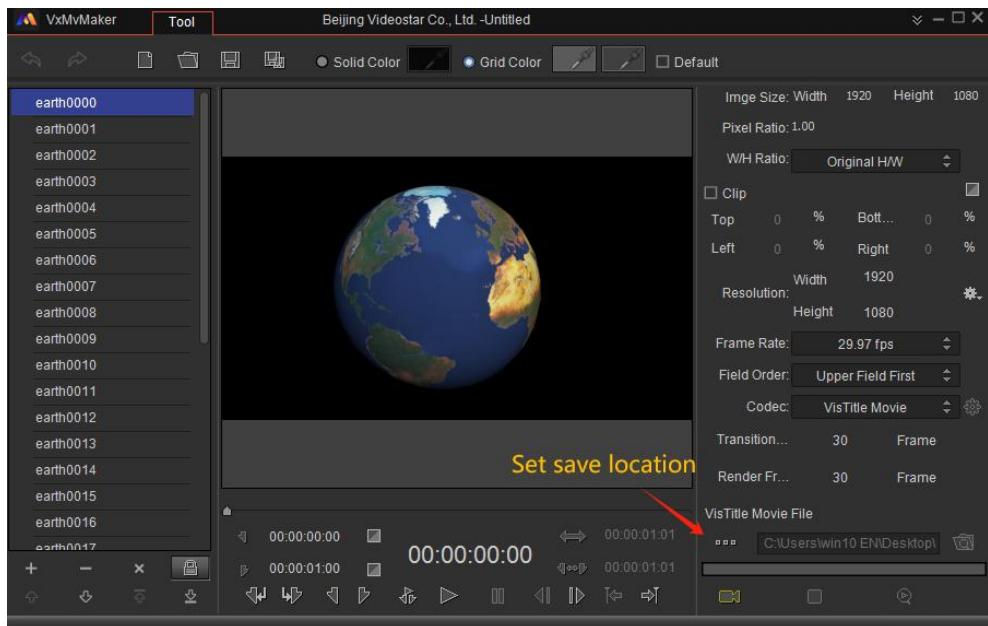

- 1) Open MV program, click , then select 3ds max Render Output File.

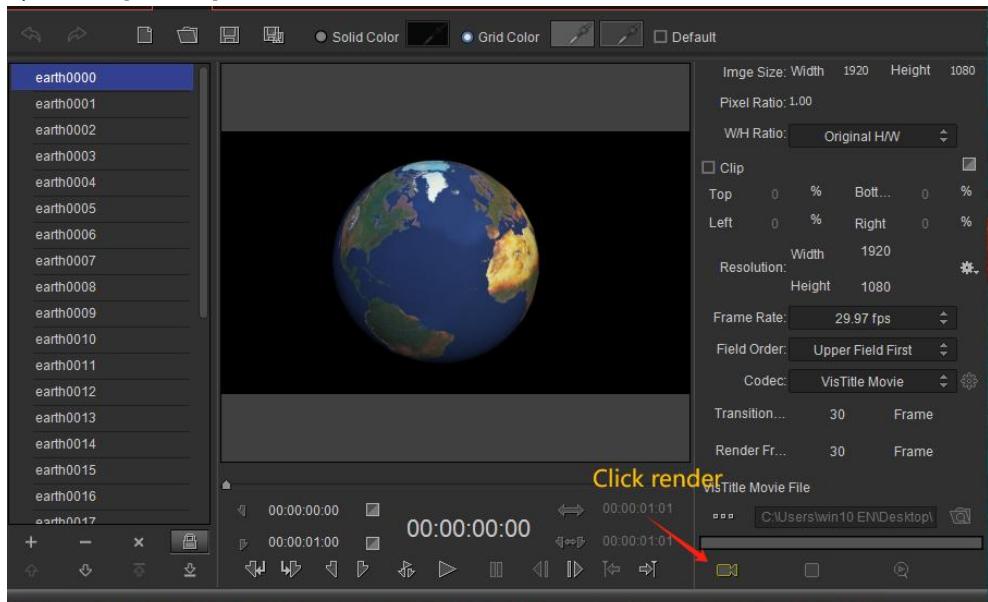

- 2) Type Ctrl+A to select all, then click [Open].

3) Set save location

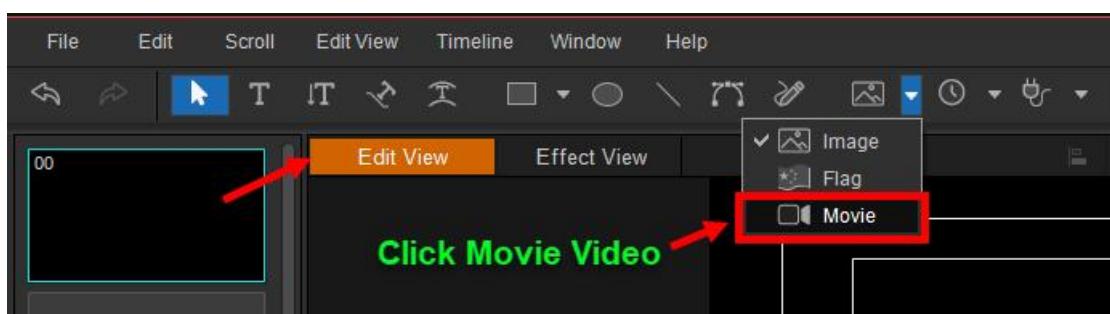

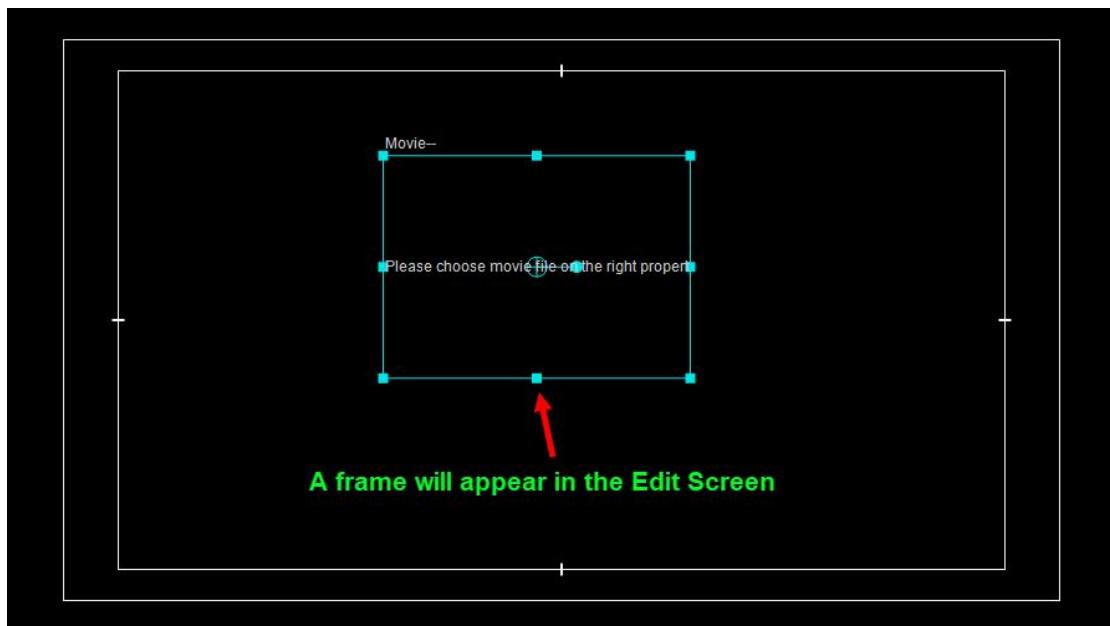

4) Click [Render] button

### 10.13.6. Using in VisTitle

1) Open VisTitle, in the Object Menu Bar click . A frame will appear in the Edit Screen

- 2) In the Properties Tab, click **Browse...** and open the MV Render Output File.

**Properties Tab (Left Screenshot)**

- Name: Movie
- Describe: Movie
- Mix Normal
- Render as new layer
- Position: X: 916.89 Y: 447.43
- Rotation: 0.00
- Scale: X: 100.00 Y: 100.00
- Shear: X: 0.00 Y: 0.00
- Pivot: X: 0.00 Y: 0.00

## 10.14. After Effect Animation in VisTitle

### 10.14.1. New Composition and Composition Setting

- 1) Open After Effects, then choose Composition, New Composition

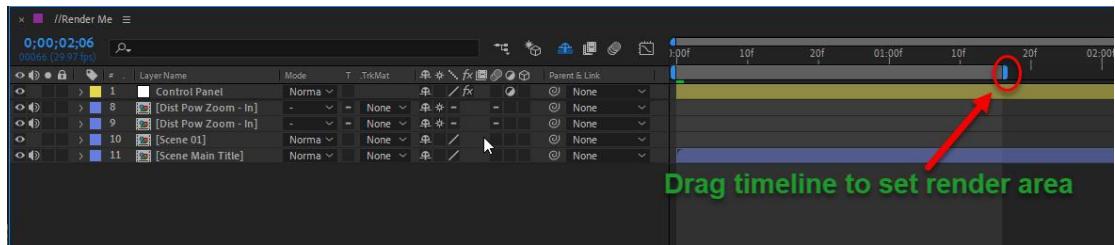

- 2) In Composition Settings dialogue window, choose size from Preset drop-down list or set custom size in Height/Width fields. Set project Duration, then click on OK.

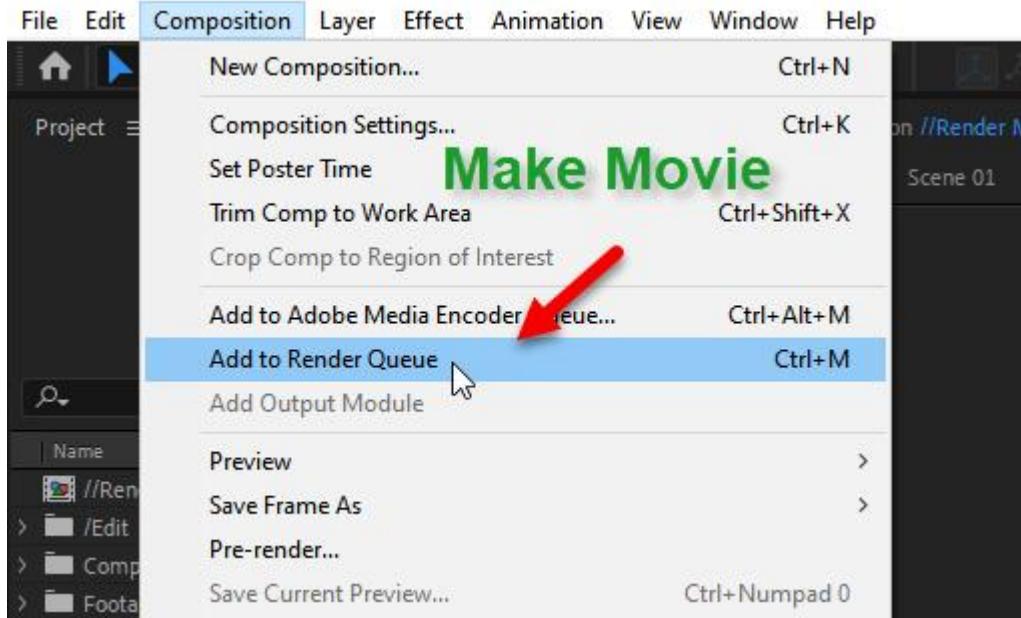

### 10.14.2. Render Area

Drag timeline to set render area

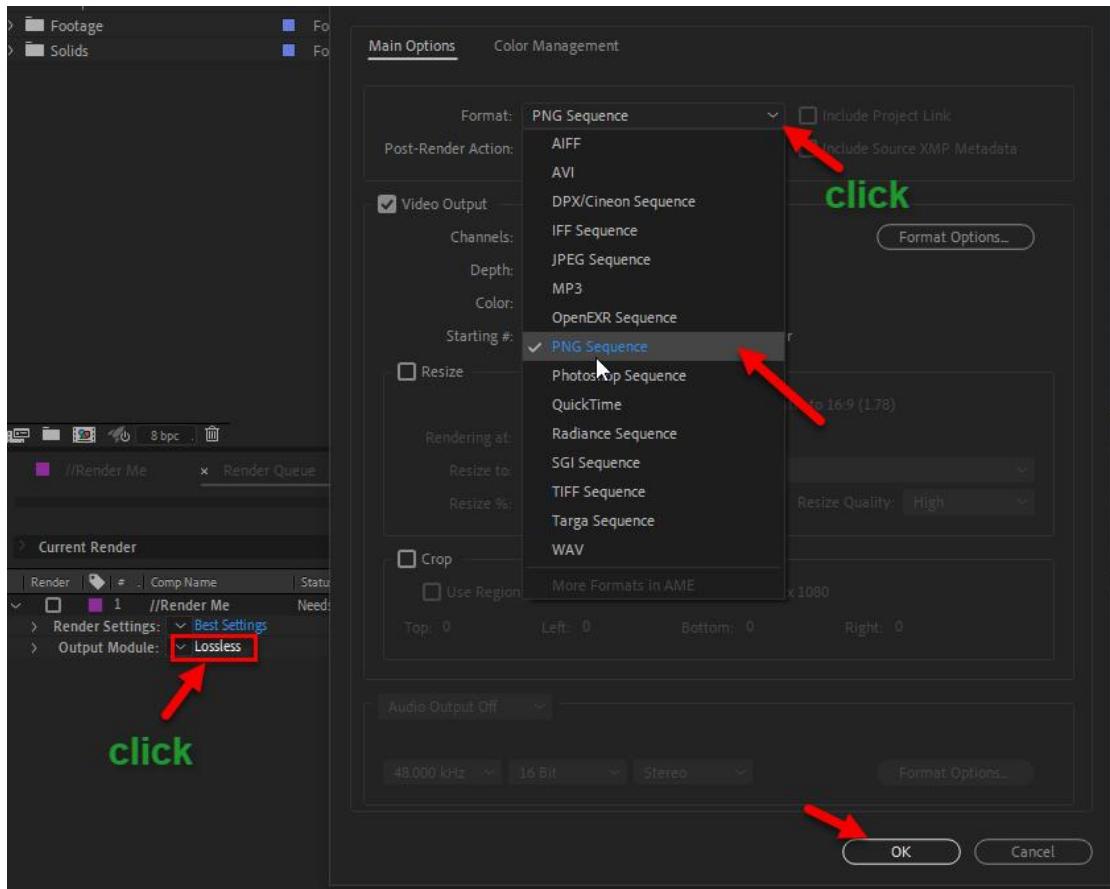

### 10.14.3. Render Setting

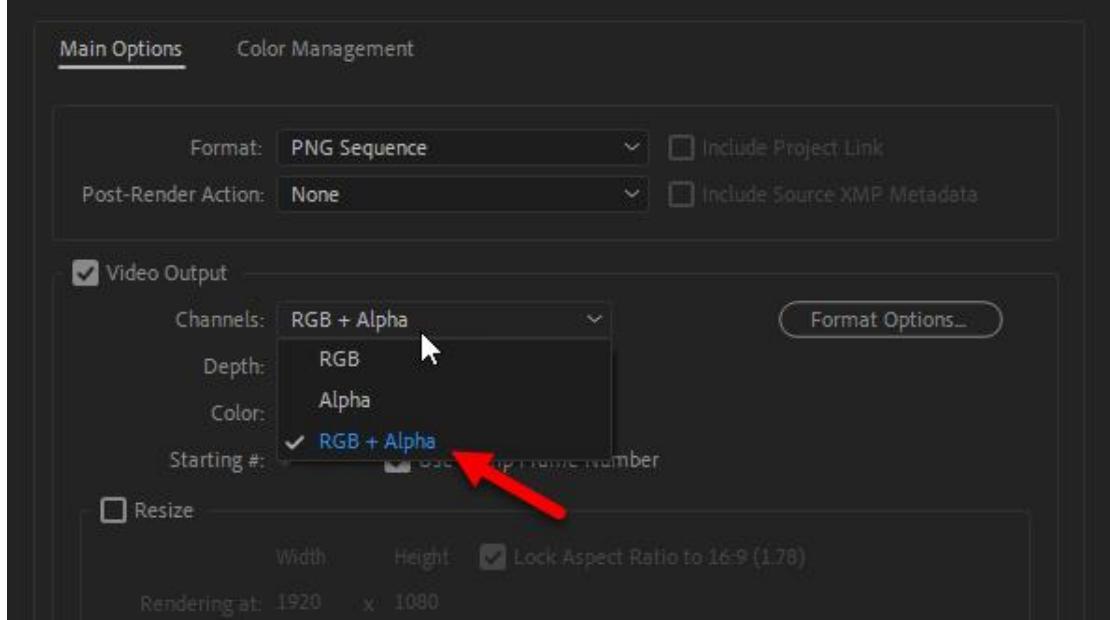

- 1) In Menu Bar choose Composition, Make Movie.

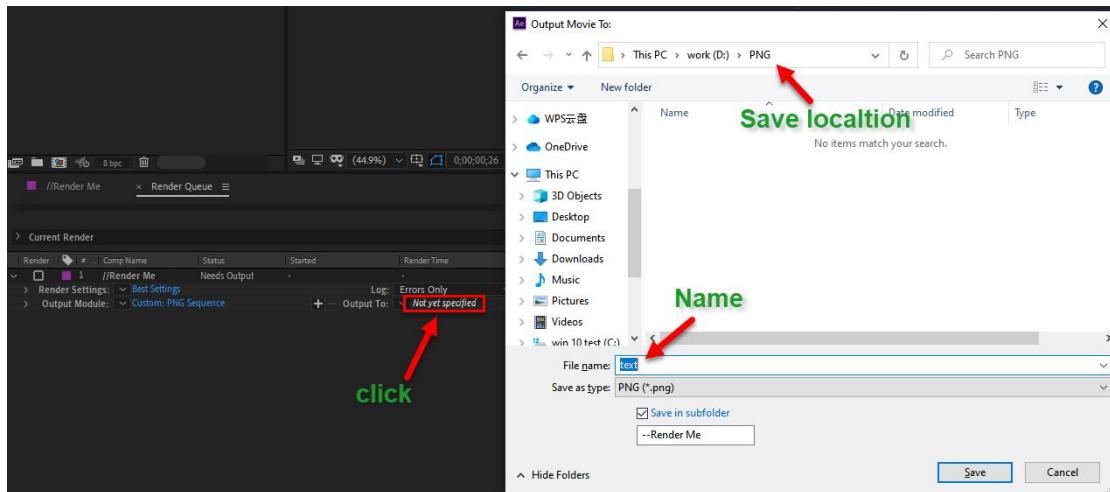

- 2) Output Module Settings: in Render Queue tab click [Lossless], then choose PNG Sequence from Format drop-down list.

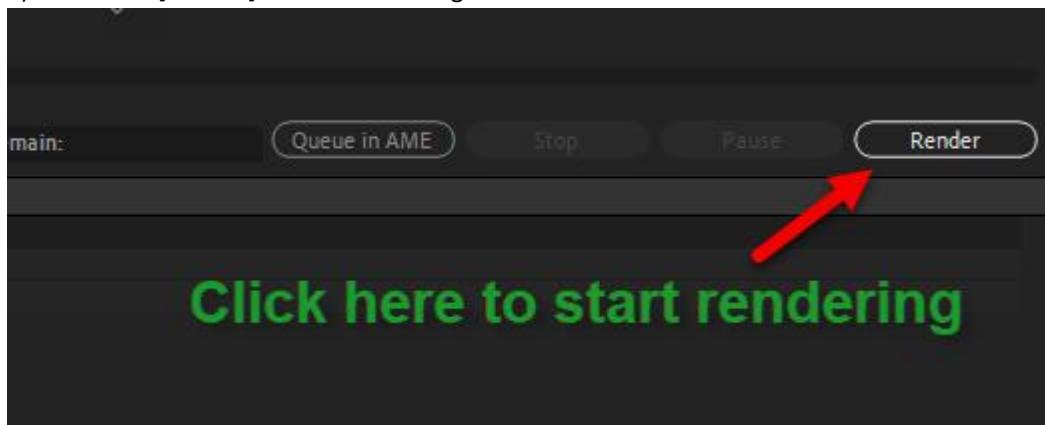

- 3) Set Alpha, choose RGB+Alpha to output sequence is transparent. Click on OK.

- 4) Name file: click [comp1[####].tga] button, set save location and enter file name. Click on Save.

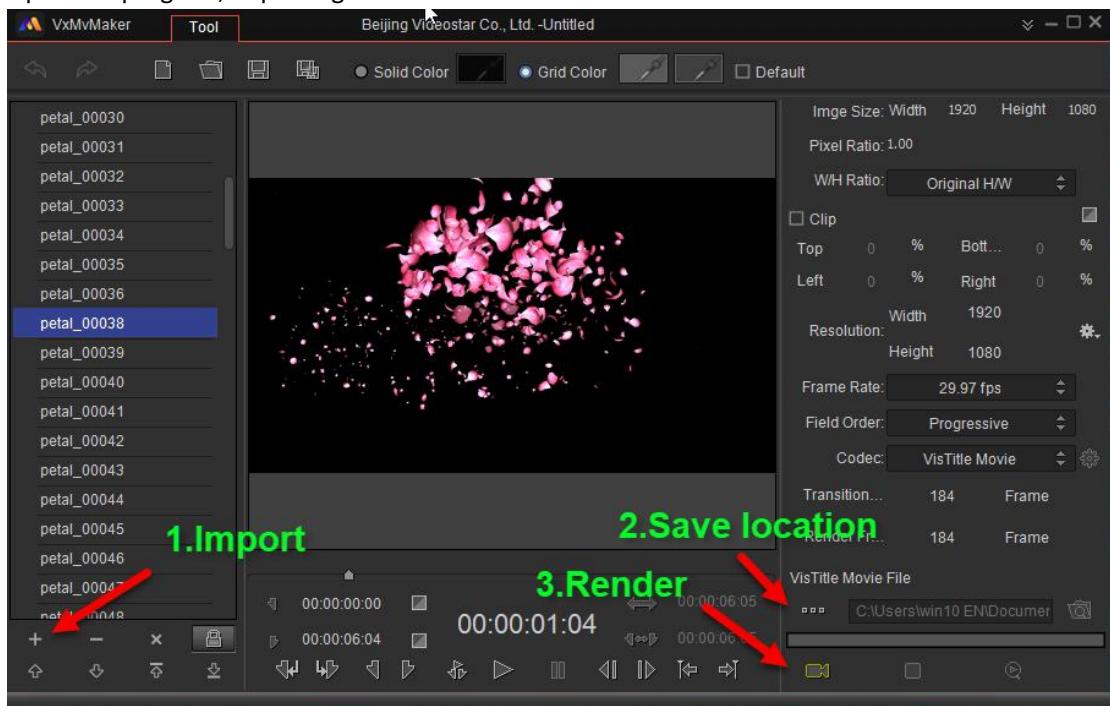

- 5) Click on [Render] to start rendering.

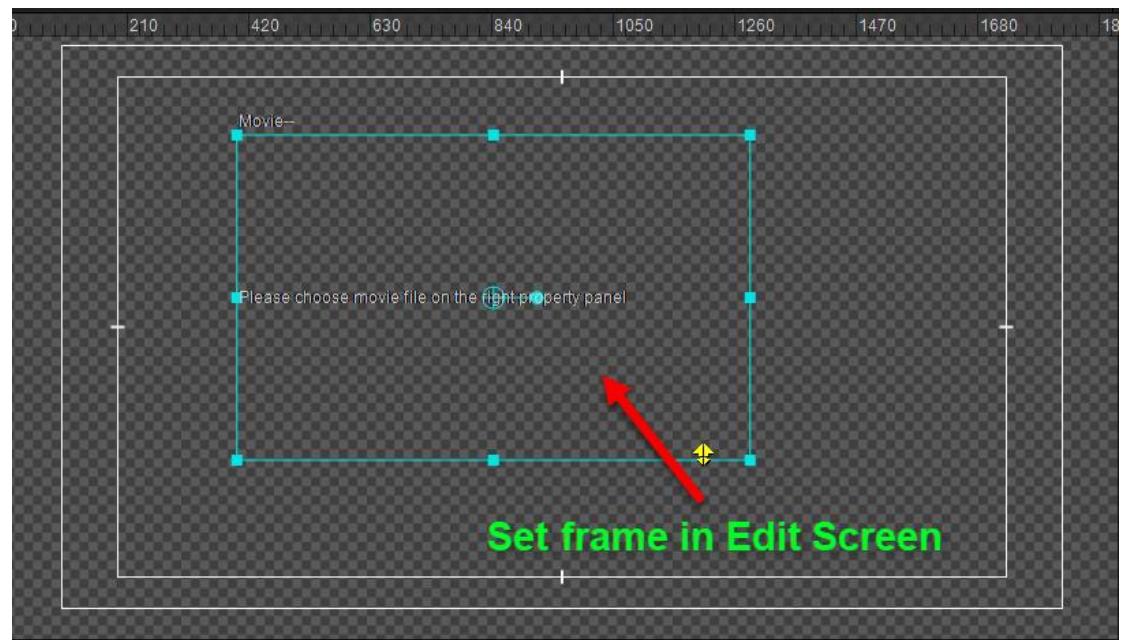

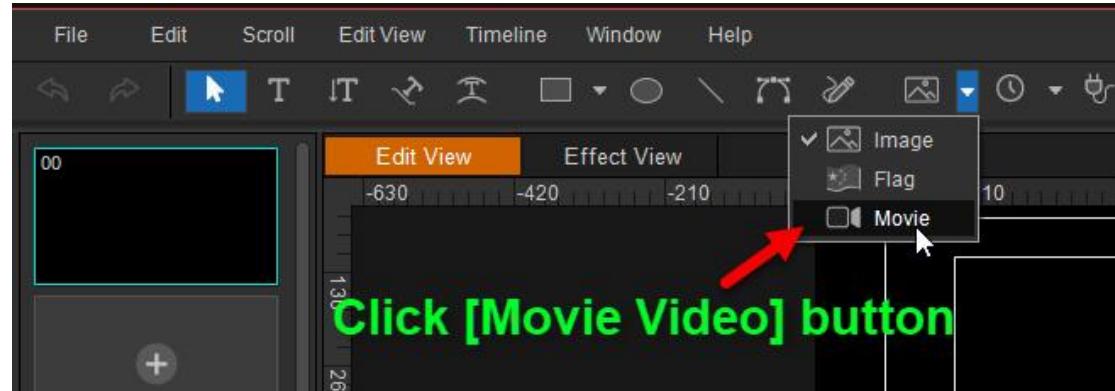

#### 10.14.4. Change Format

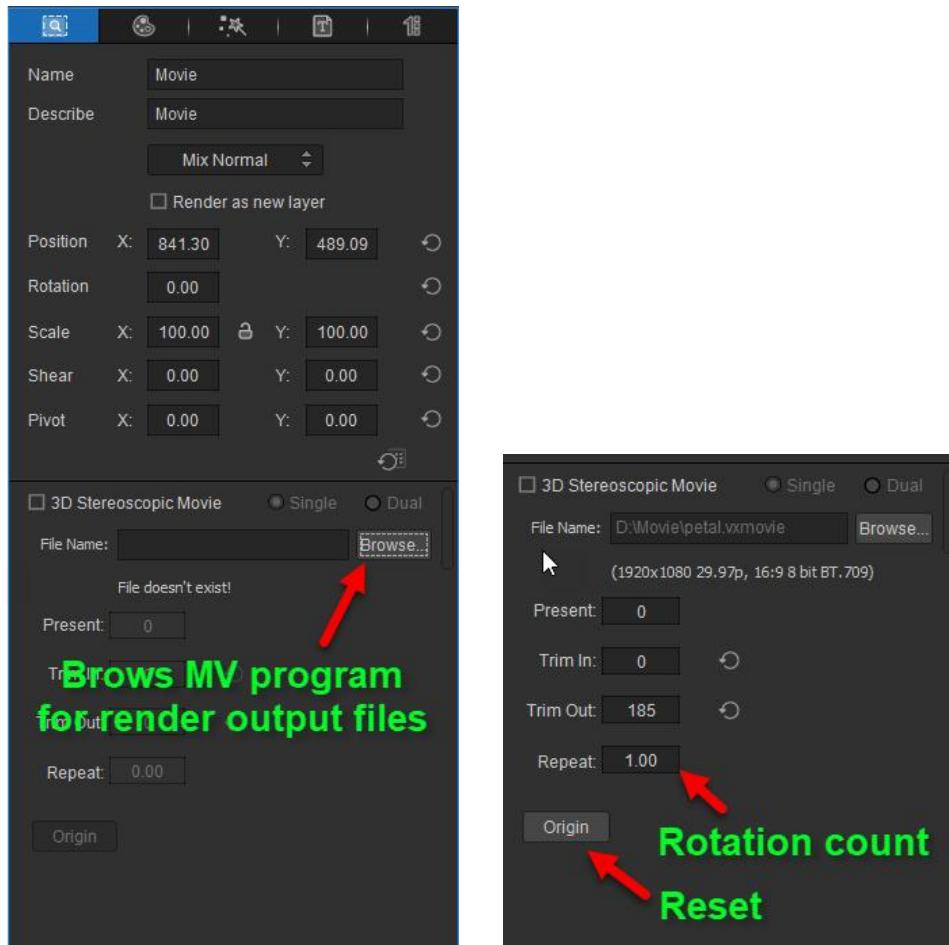

Open MV program, import .tga file created in After Effects

### 10.14.5. Using in VisTitle

Open VisTitle, click  , a frame will appear on the Edit Screen. In Properties Tab open MV render output file.

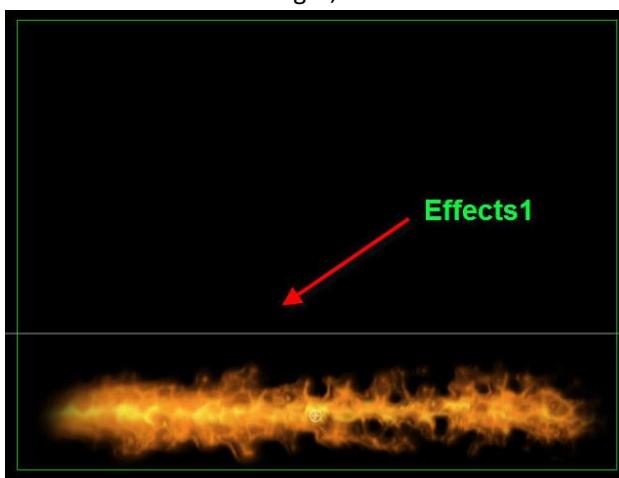

## 10.15. Combine Animation with Animated Header

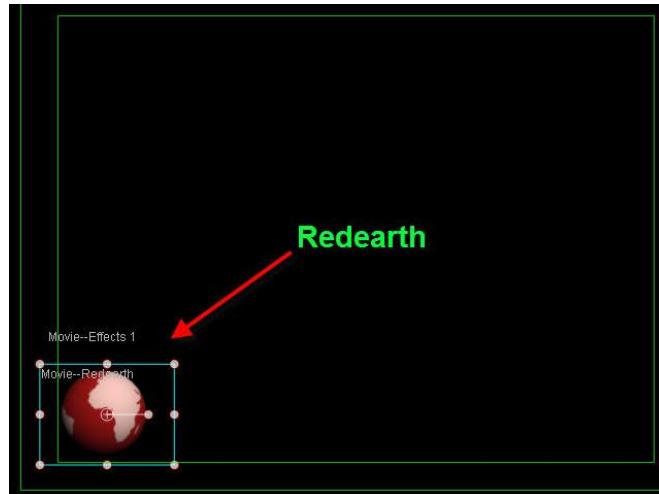

### 10.15.1. Set Keyframe positions

- 1) In the Animation Template Library, choose Movie2, "Effects1". Double-click to place in Edit Screen.

Activate the 3D Edit Mode, and set Effect1 Y-axis to 180 (this animation is a flame that moves from left to right, but here we invert the direction)

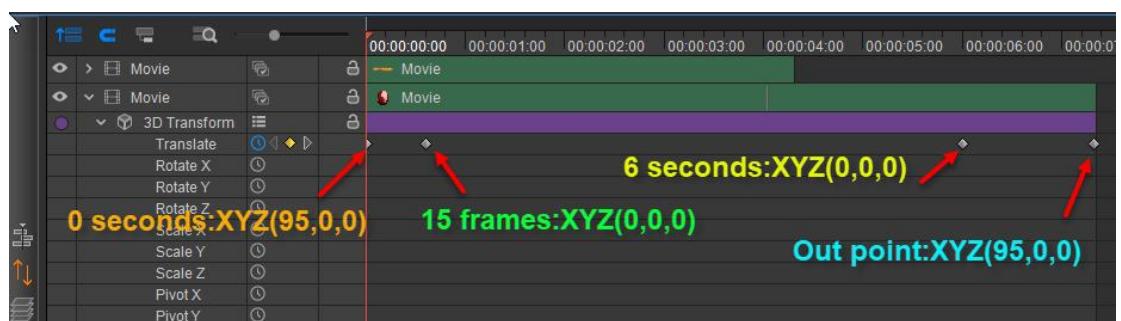

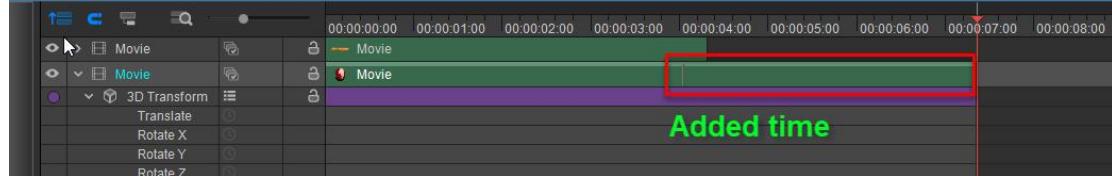

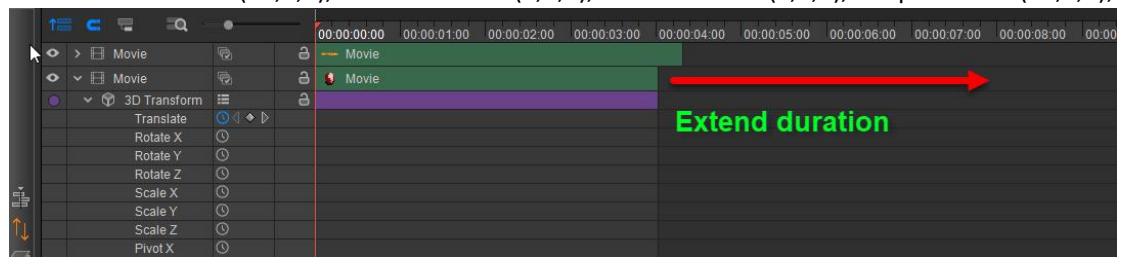

- 2) From the Animation Template Library, choose Movie1, "Redearth". Adjust size and position.

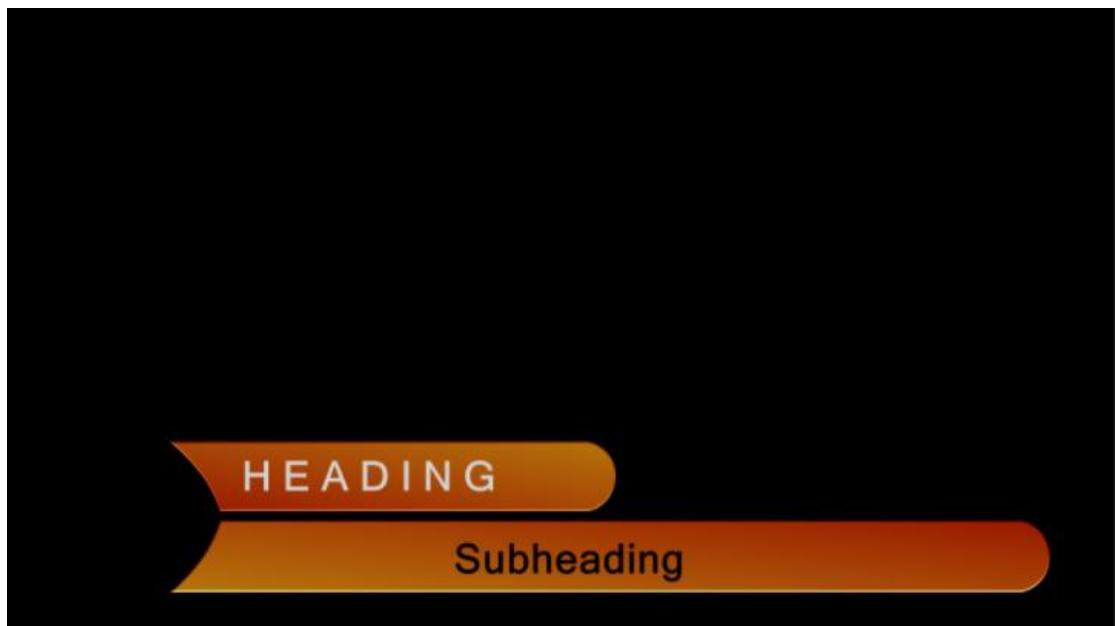

- 3) Set Redearth keyframes: extend duration to 7 seconds 9 frames, then drag timeline marker to 0 seconds. In 3D Transform set animation displacement keyframes.

0 seconds: XYZ (95,0,0), 15 frames: XYZ (0,0,0), 6 seconds: XYZ (0,0,0), End point: XYZ (95,0,0),

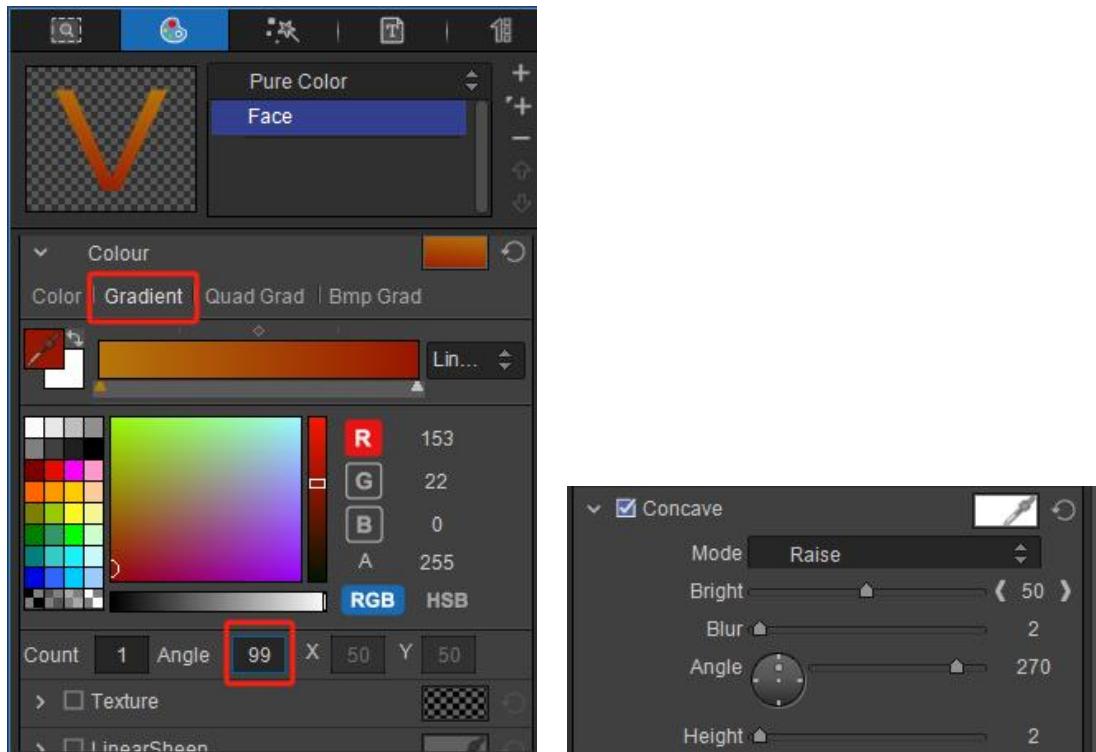

## 10.15.2. Background and Text

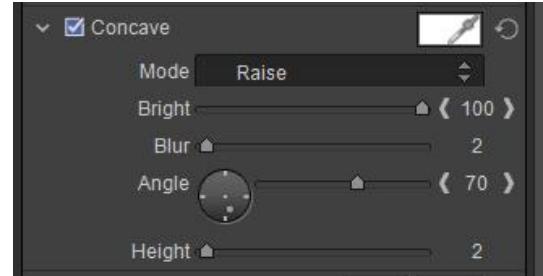

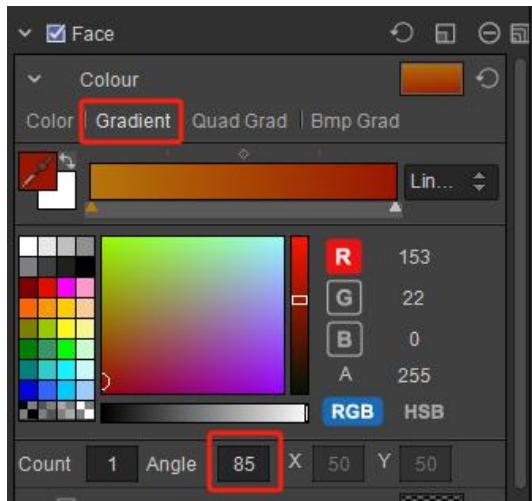

- 1) Use Bezier Curves to draw backgrounds, then insert text.

- 2) Set upper background color: set to gradient, 99 degree, RGBA (185,125,12,255) and (152,19,0,255); concave effect RGBA (255,255,255,255).

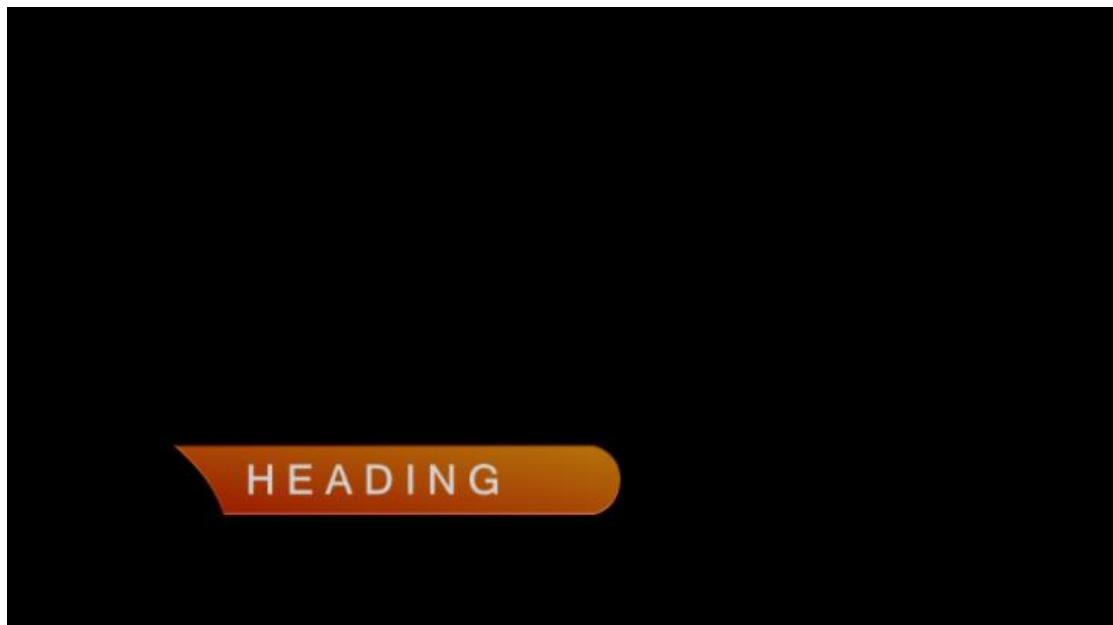

- 3) Set lower background color: set to gradient, 85 degree, RGBA (218,168,44,255) and (142,23,6,255); concave effect, RGBA (255,255,255,255).

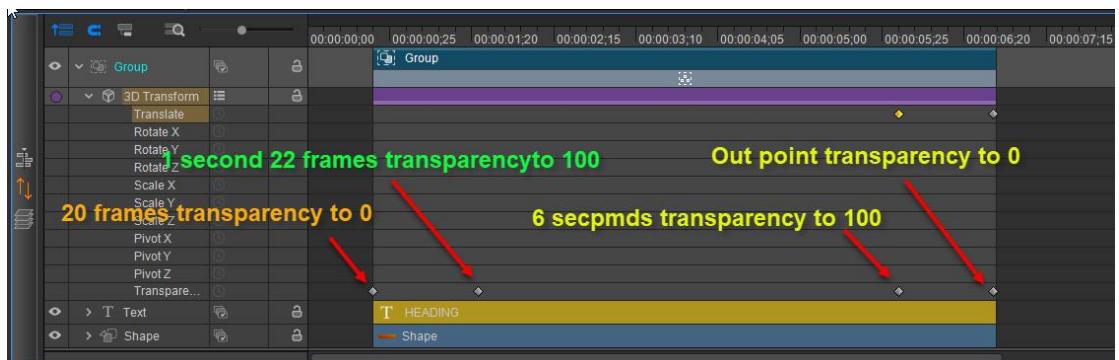

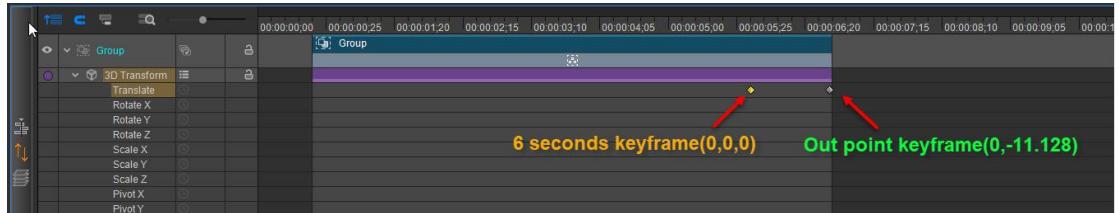

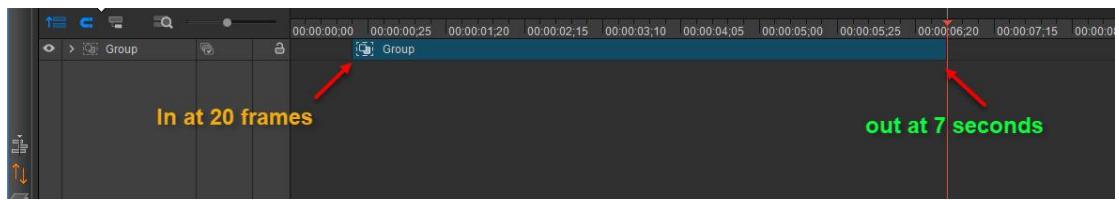

- 4) Text color: set "HEADING" RGBA to (210,210,210,255), and "Subheading" RGBA to (0,0,0,255)

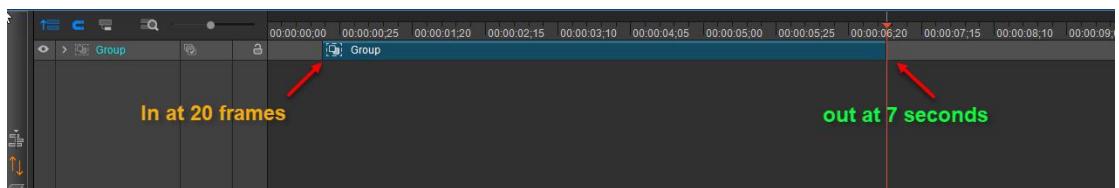

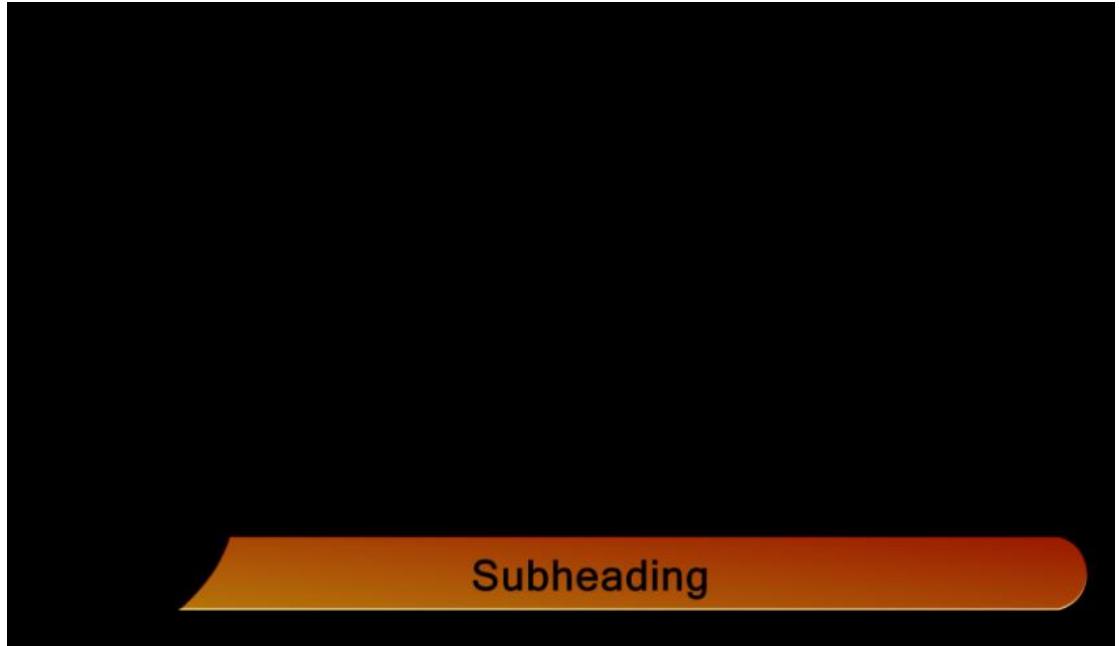

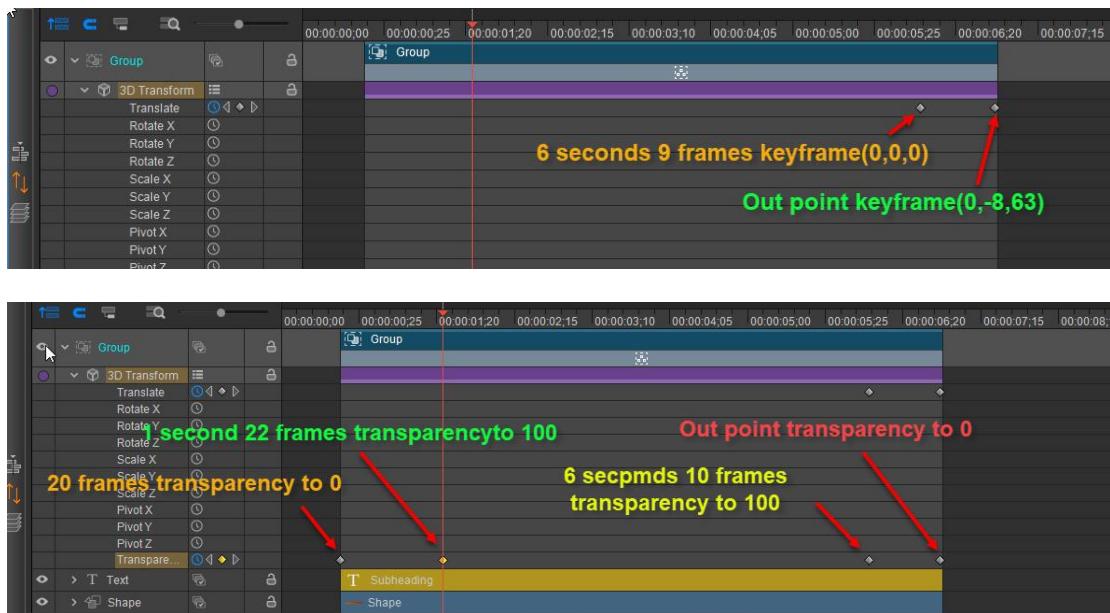

- 5) Choose "HEADING" and background to Make Group, then set keyframes and duration as shown below

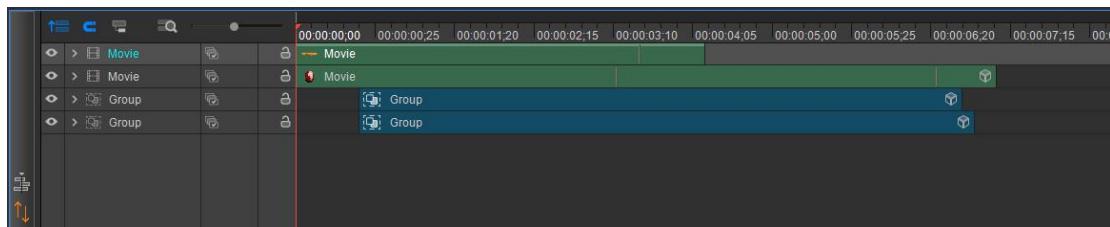

- 6) Choose "Subheading" and background to Make Group, then set keyframes and duration as shown below

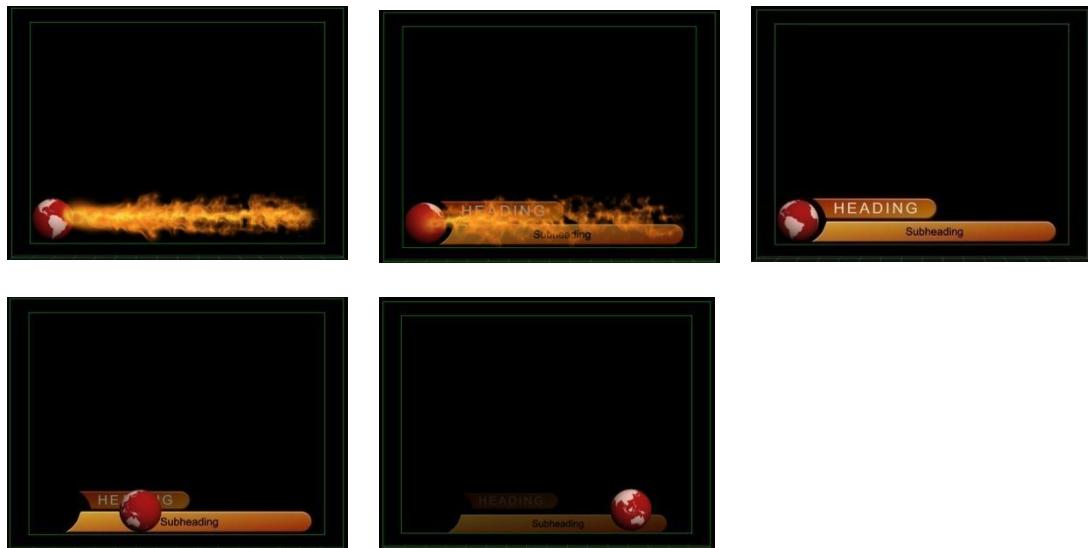

### 10.15.3. Set position

### 10.15.4. Animation Preview

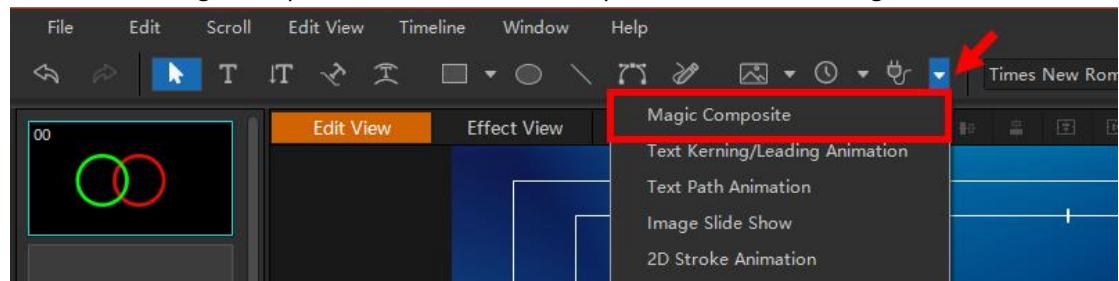

# Chapter Eleven Plugins

## 11.1. Magic Composite

### ◆ Operation Flow of Magic Composite

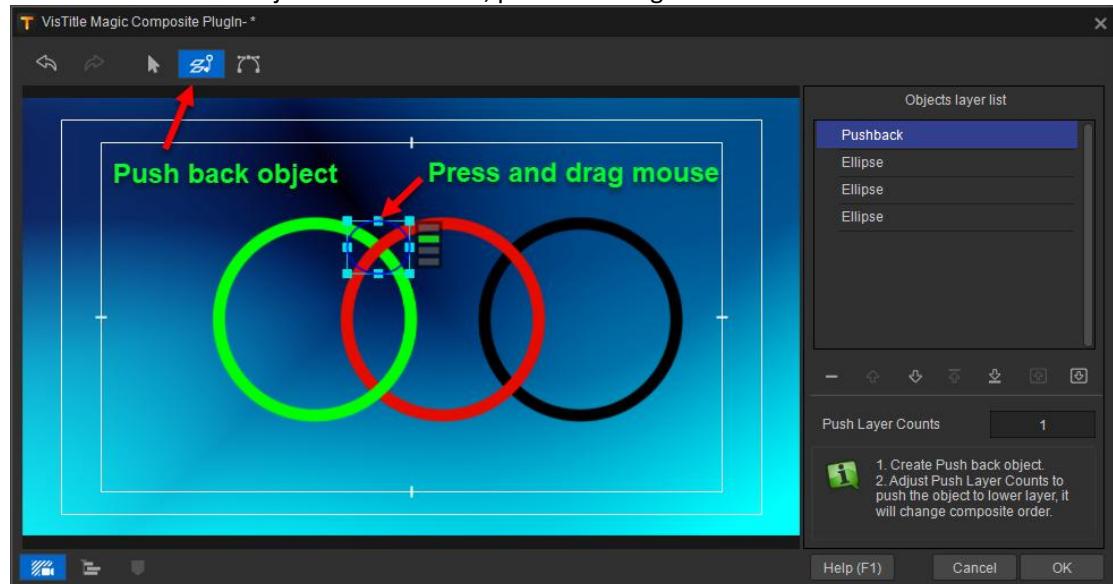

#### 1. Run Magic Composite Plugin

Choose “Magic Composite” button from the drop-down list of “Title Plugin”.

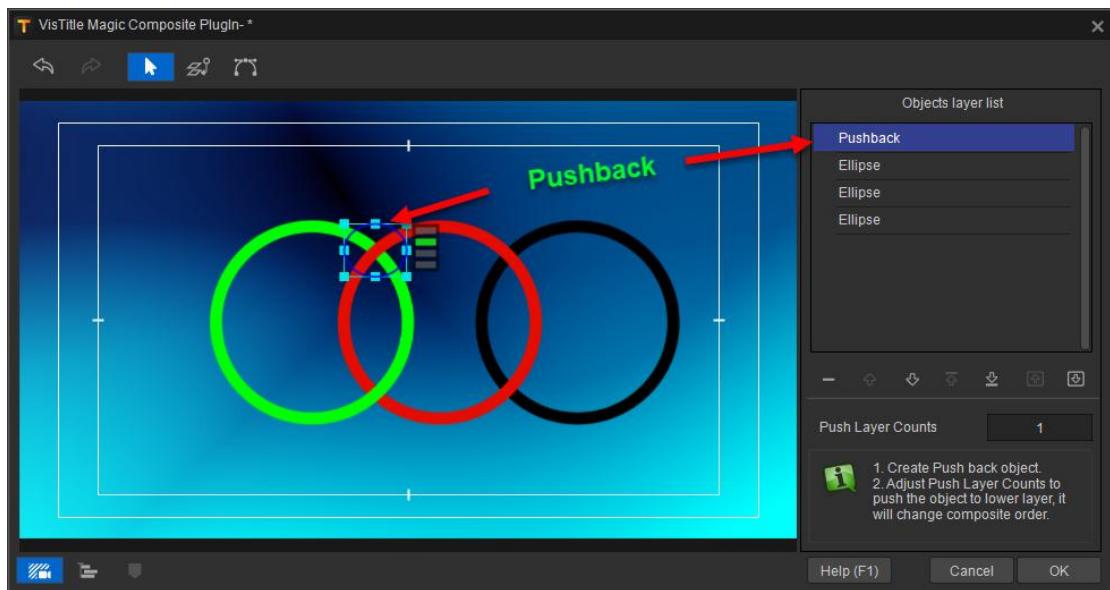

#### 2. Create Push Back

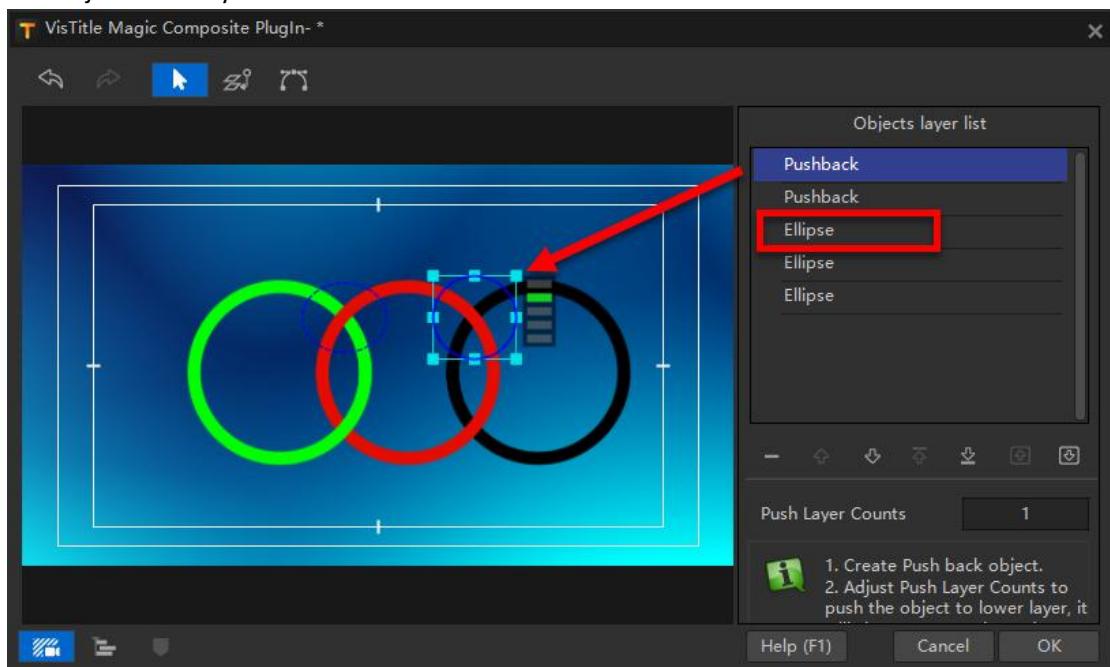

Click the “Push back object” button , press and drag mouse in the Edit Screen.

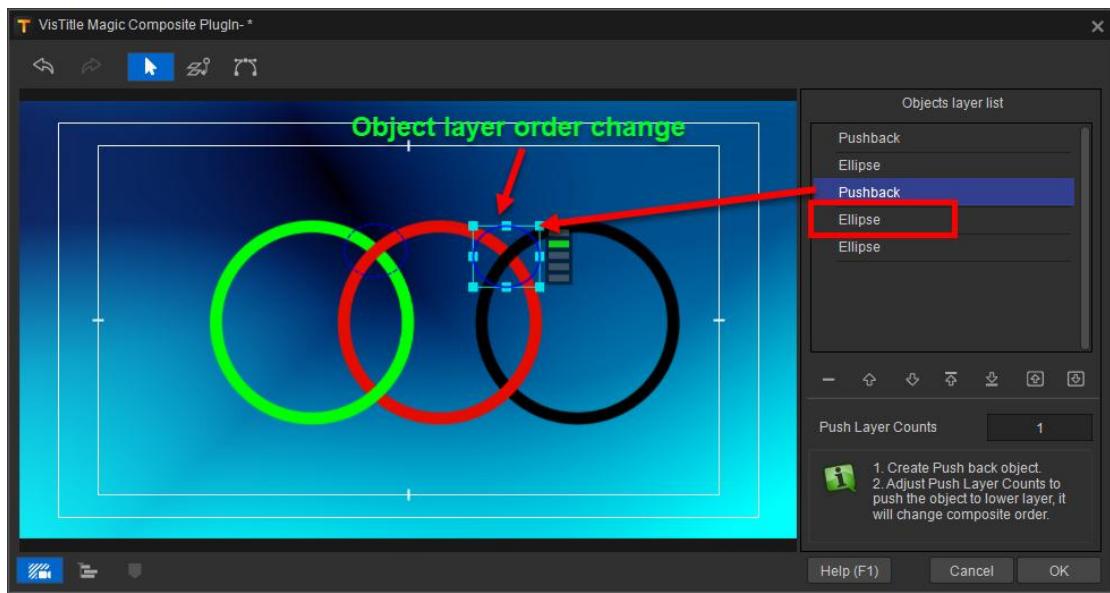

Release mouse, create a push back object. New pushback object appears in the object layer list.

### 3. Adjust Push Layer Counts

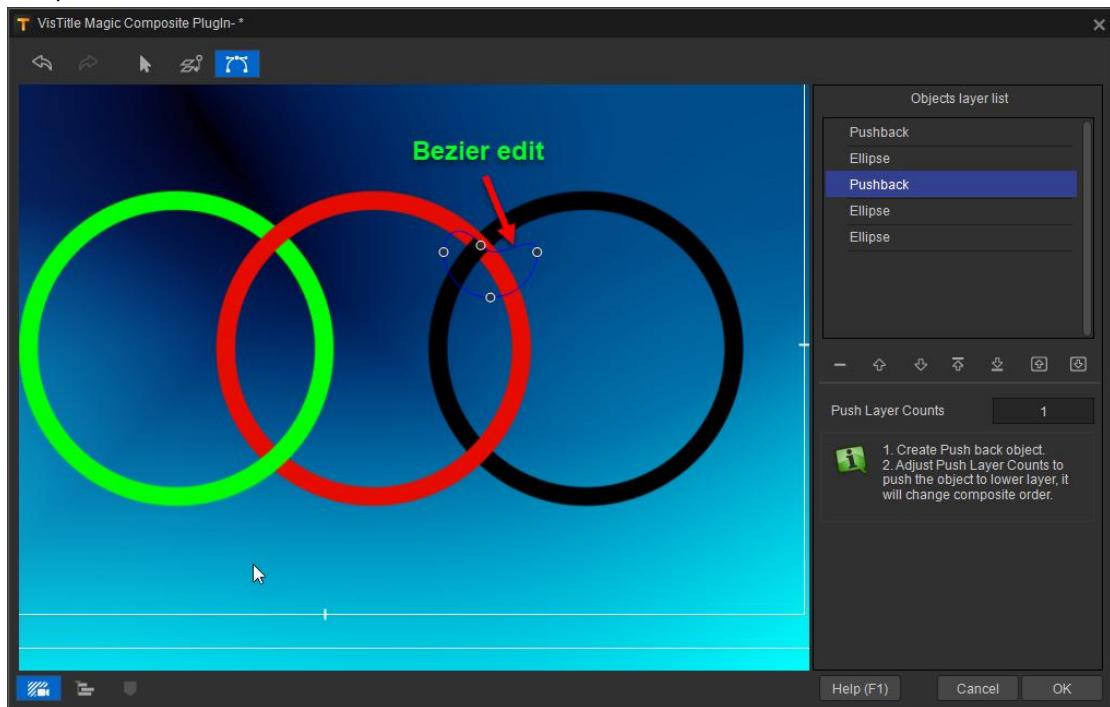

First click to select push in Edit Screen, or in the object layer list click to select. Then click the "Down" button under object layer list to change object layer order.

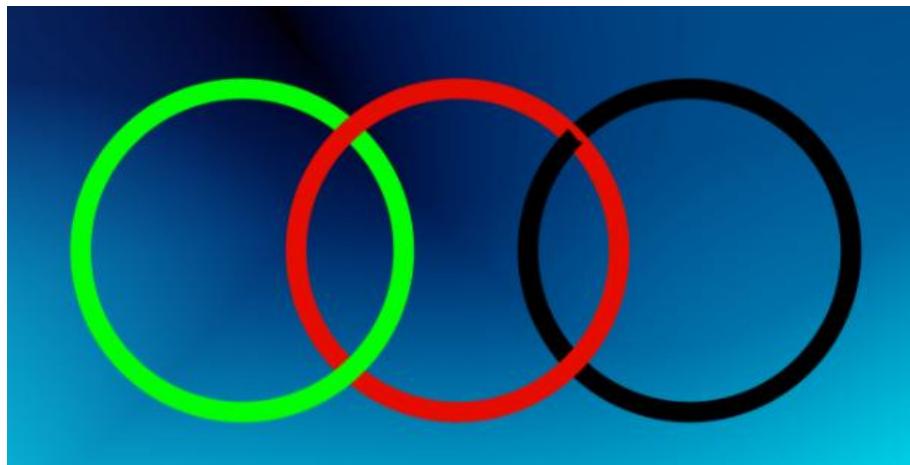

#### 4. Bezier Editor

First select a push object, click the “Bezier Editor” button or double click left mouse button, push, and edit Bezier curve.

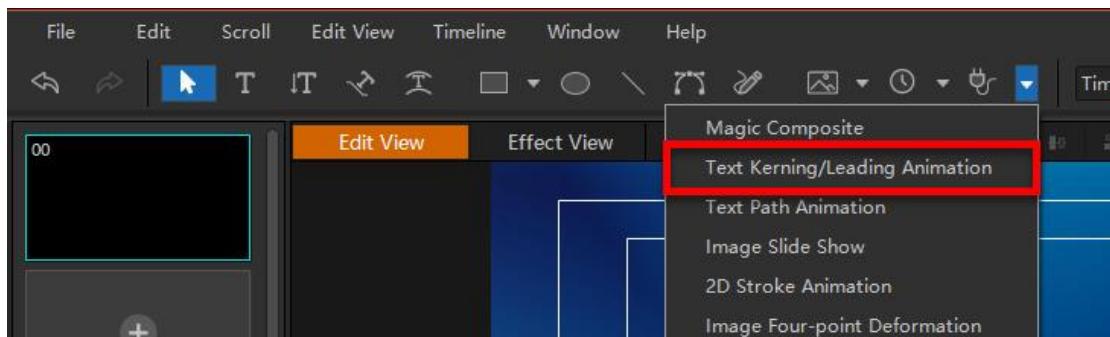

#### 5. Preview

## 11.2. Text Kerning/Leading Animation

### ◆ Operation Flow of Text Kerning/Leading Animation

Click the “Horizontal Text” button to create a text object in Edit Screen of VisTitle. After creating object, select “Text Kerning/Leading Animation” from the drop-down list of “Title Plugin” in tool bar.

### 11.2.1. Kerning Animation

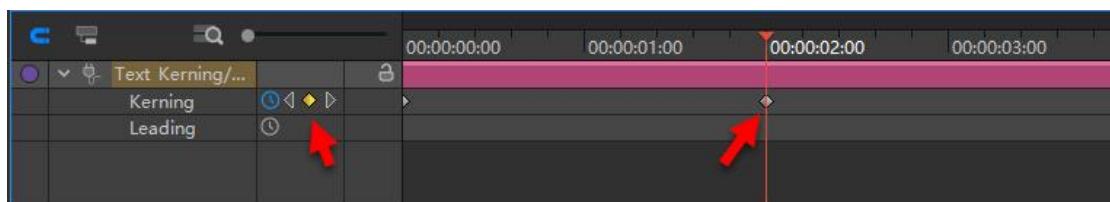

#### 1. Set Kerning Animation Mode

Click the “Align Center” button in menu bar to set kerning animation mode.

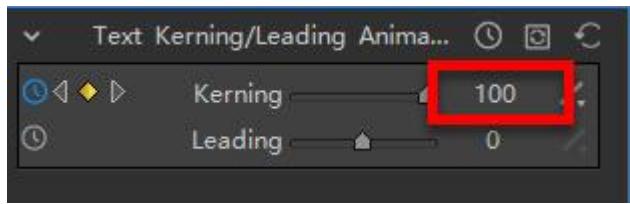

#### 2. Keyframe Setting

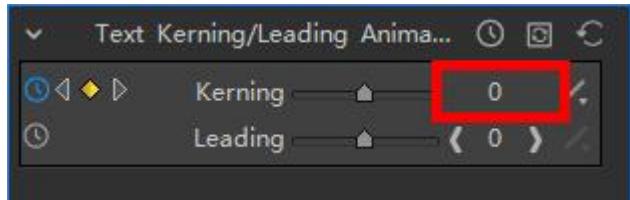

Move timeline to 2 second position, click the “Add/remove keyframe” button in the timeline window.

Change keyframe parameter to 100 in Property screen.

Move timeline to 4 second position in the timeline window then in Property screen set parameter as 0.

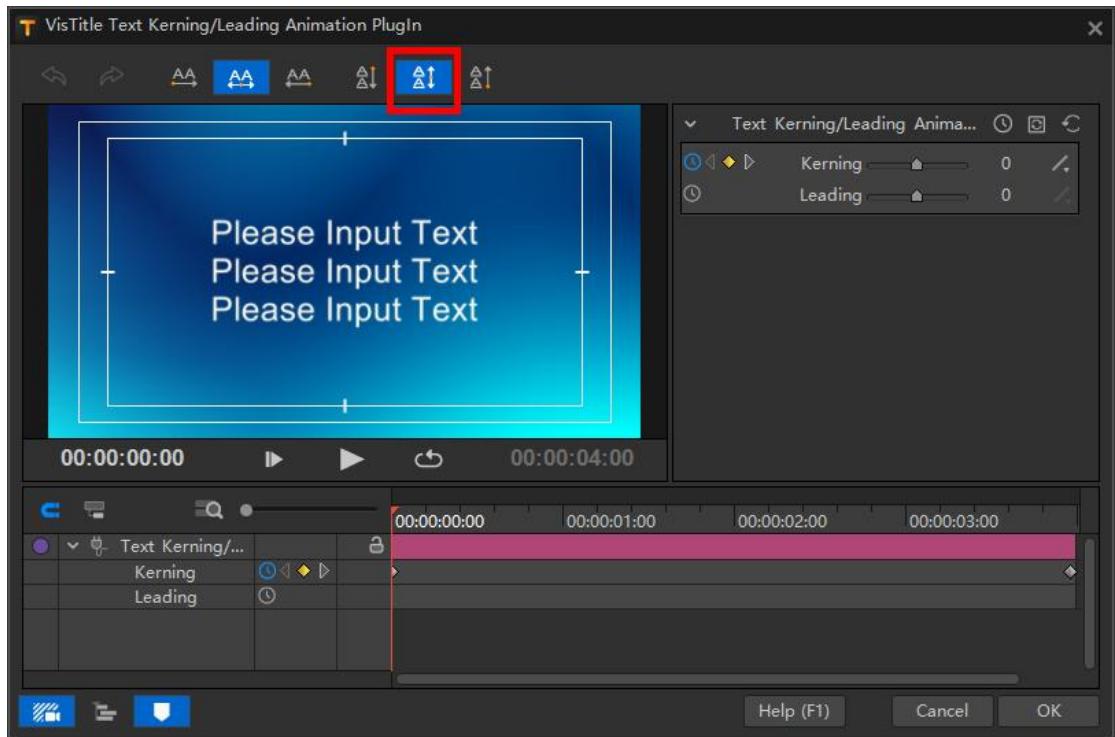

3. Preview

## 11.2.2. Leading Animation

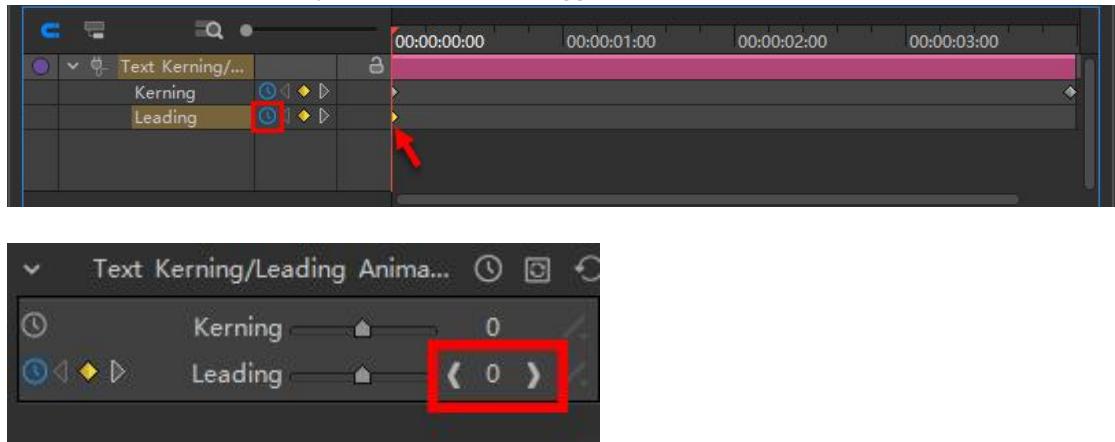

### 1. Set Leading Animation Mode

Click the “Align Middle” button in menu bar to set leading animation mode.

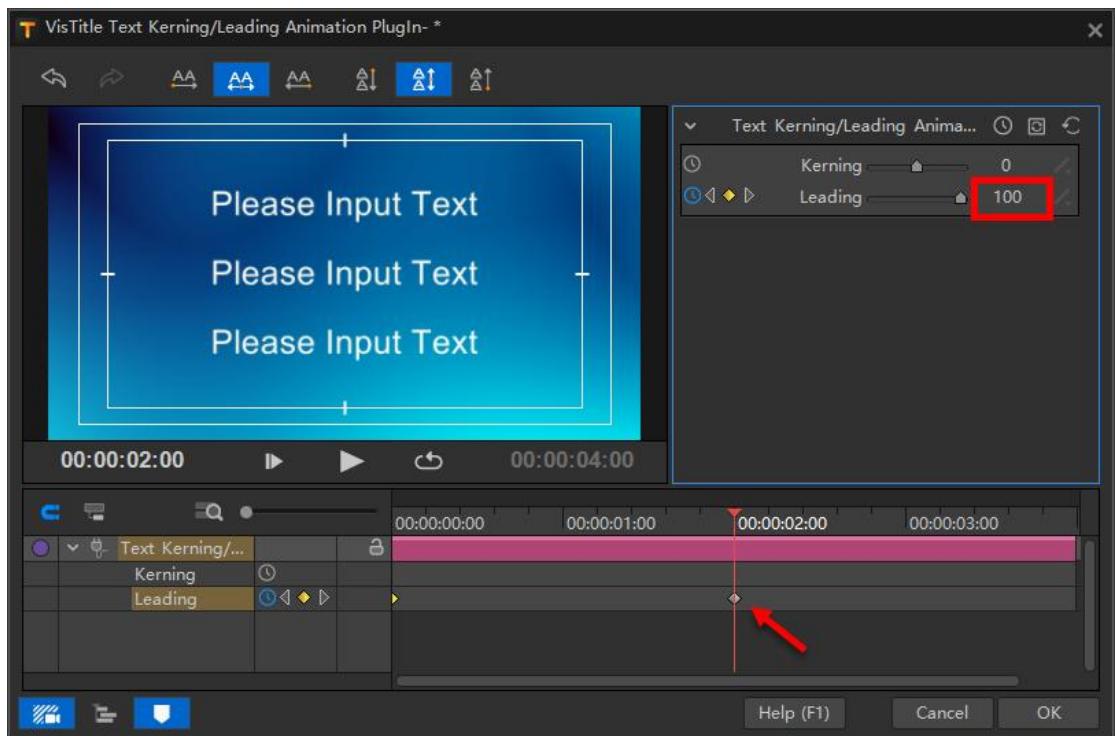

## 2. Keyframe Setting

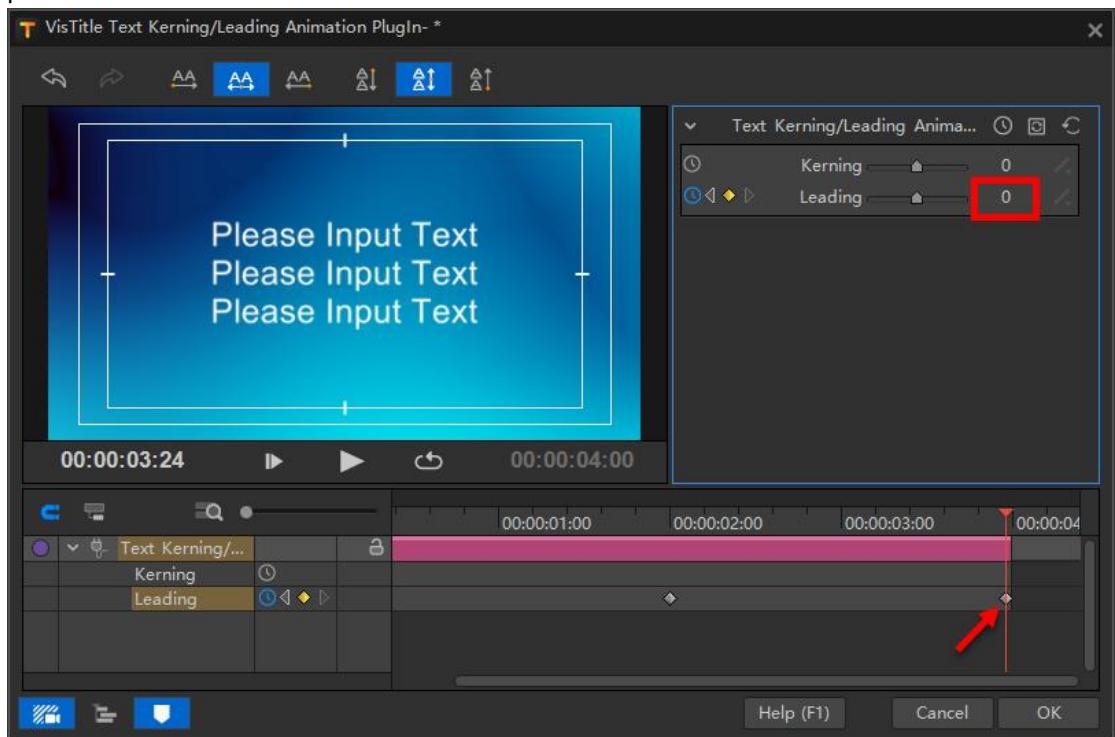

Move timeline to 0 second position, click the “Toggle Animation” button in the timeline window.

Move timeline to 2 second position in the timeline window then in Property screen set parameter as 100.

Move timeline to 4 second position in the timeline window then in Property screen set parameter as 0.

### 11.3. Text Path Animation

#### ◆ Operation Flow of Text Path Animation

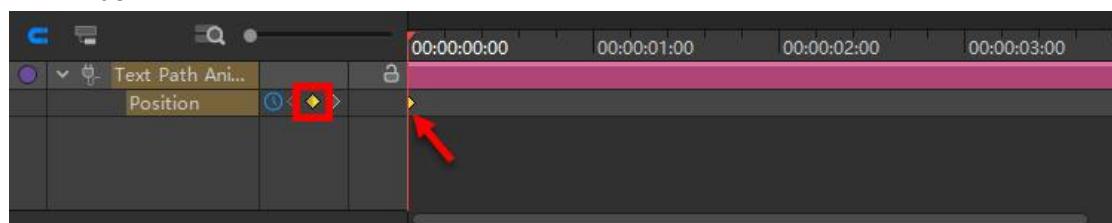

- 1、Create a curve text in Edit Screen of VisTitle.

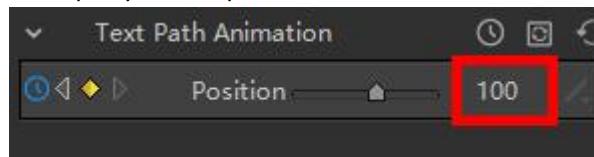

2、 After creating, select “Text Path Animation” from the drop-down list of “Title Plugin” in tool bar.

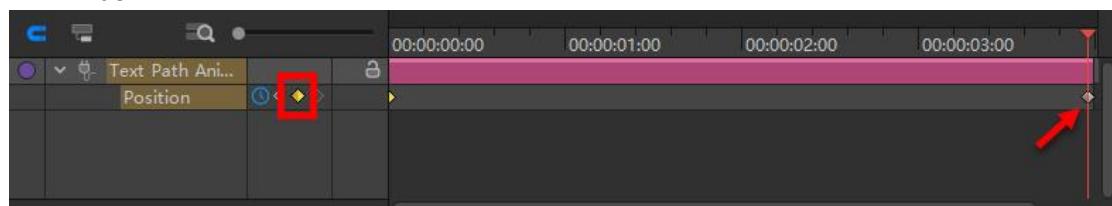

3、 Move timeline to 0 second position, click the “Toggle Animation” button in the timeline window.

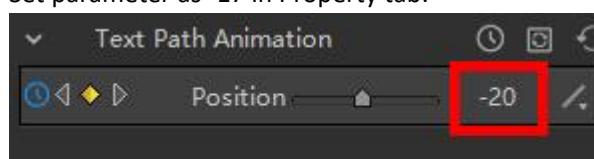

In Property tab set parameter as 100.

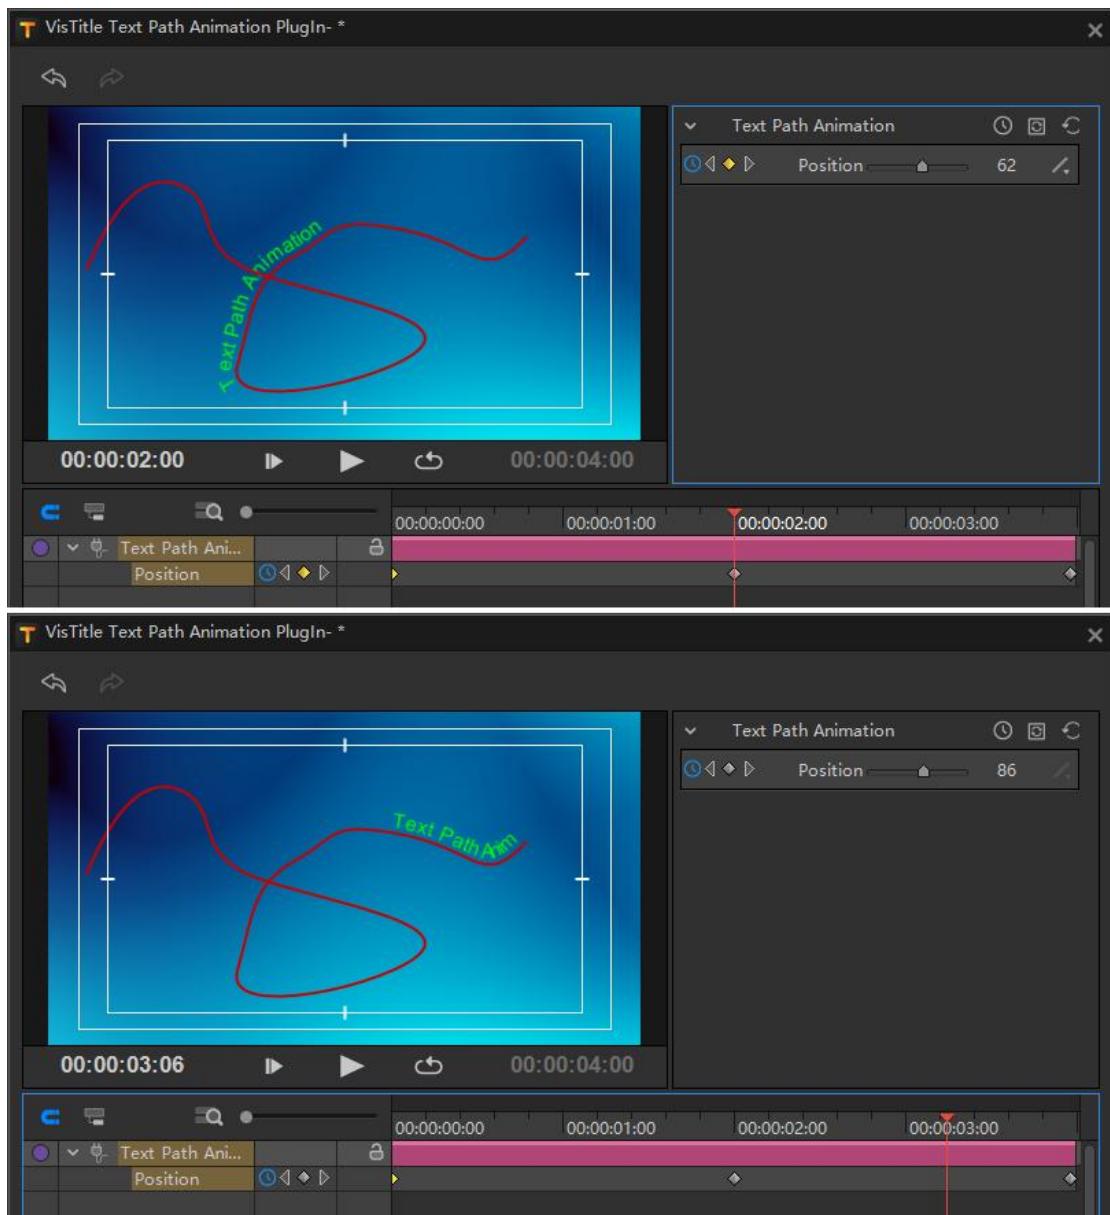

4、 Move timeline to the tail frame position then click “Add/Remove keyframe” in the timeline window.

Set parameter as -20 in Property tab.

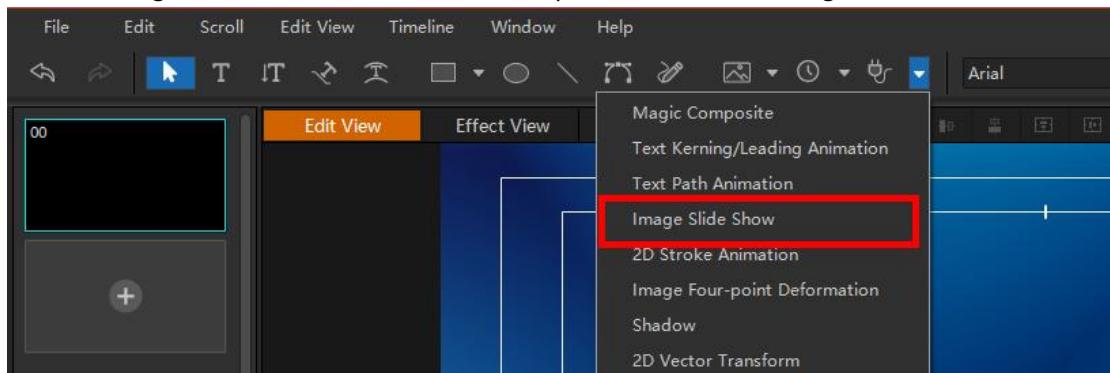

5、 Preview

## 11.4. Image Slide Show

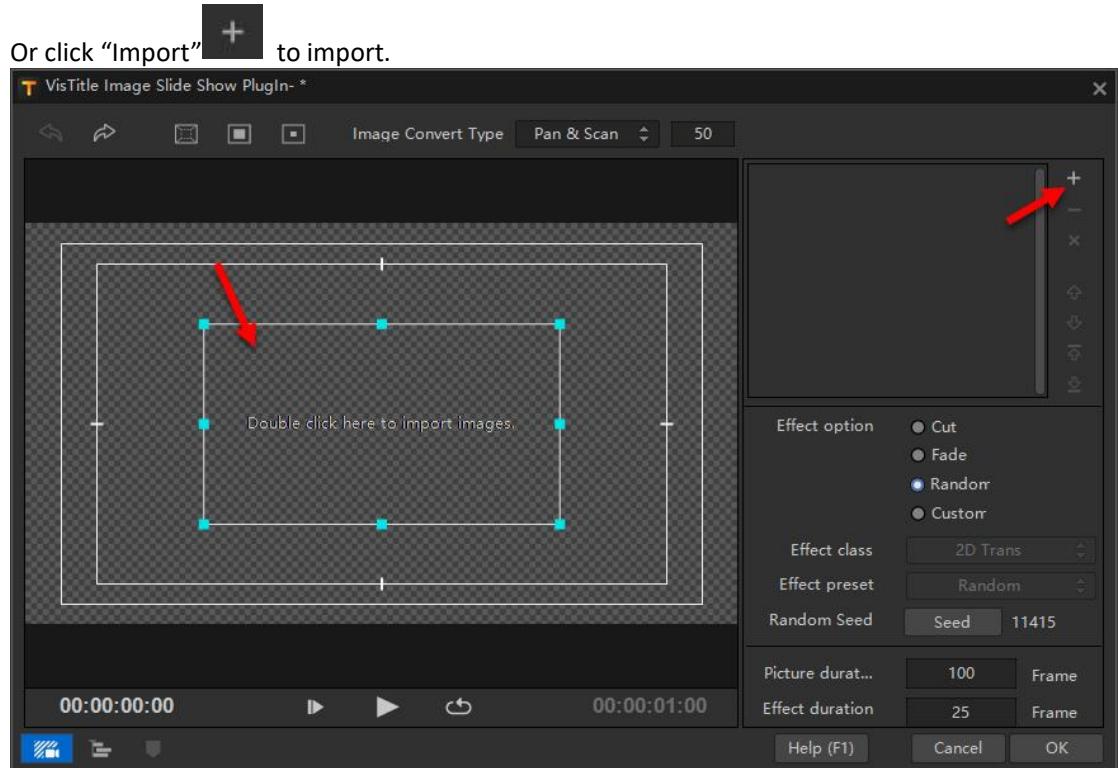

### ◆ Operation Flow of Image Slide Show

Choose “Image Slide Show” button from the drop-down list of “Title Plugin”.

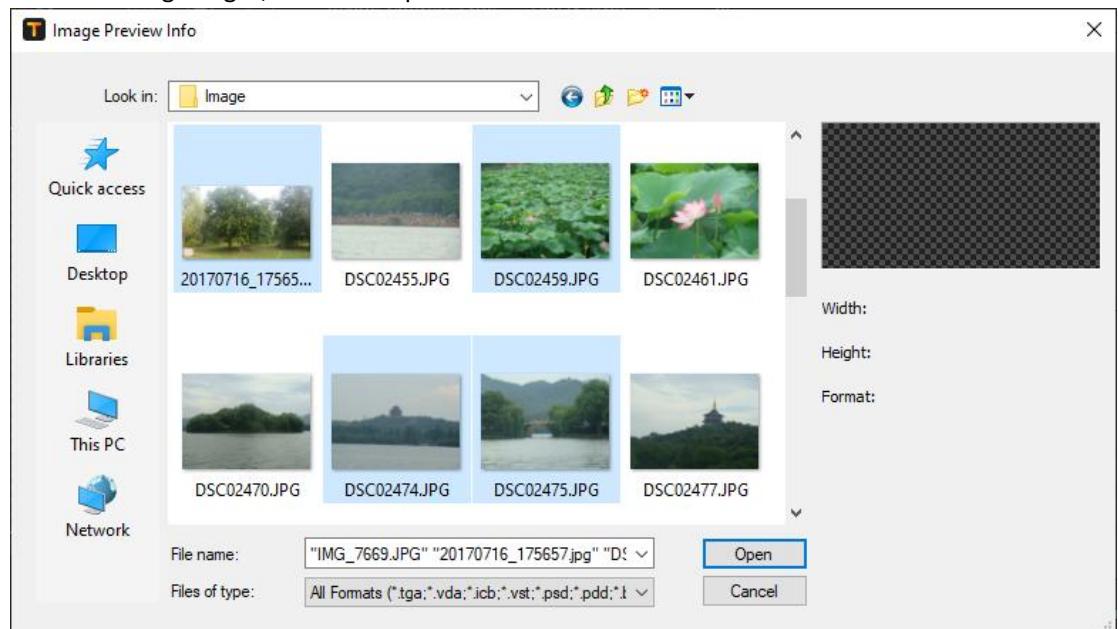

1. Import Images

Click the marked area in the following picture to import images.

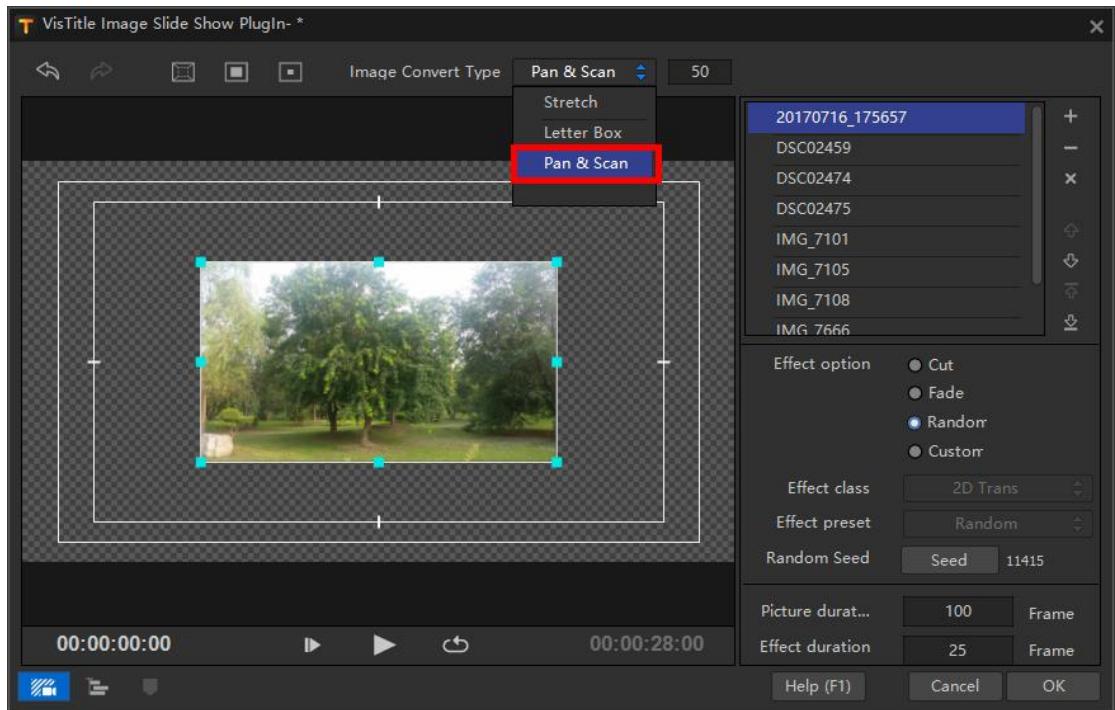

After choosing images, click the “Open” button.

## 2. Set Image Convert Type

Click “Image Convert Type”, select “Pan & Scan” in the context menu.

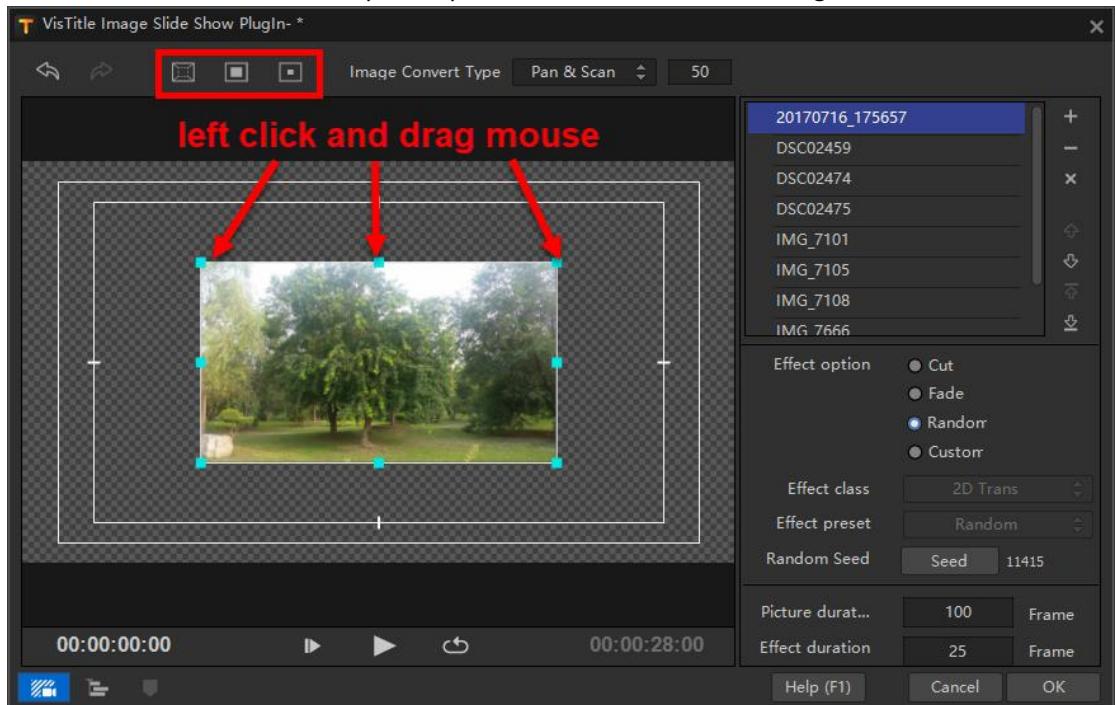

### Set Size

- 1) Clicking the following buttons can quickly alter size, supported common sizes are full screen, 1/4 and 1/8.

- 2) Move cursor to the control points, press left mouse button and drag.

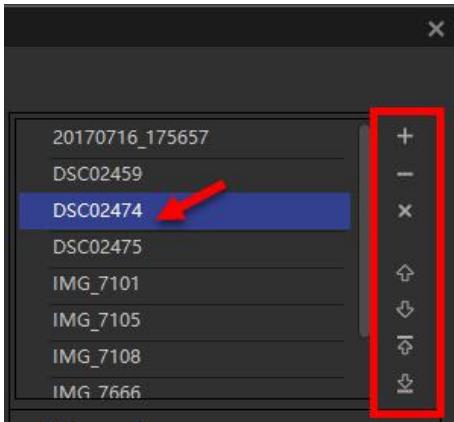

### 3. Adjust Image Order

Left click chosen image, for example DSC02474, in the image list. Then click the “Delete” button to delete the image.

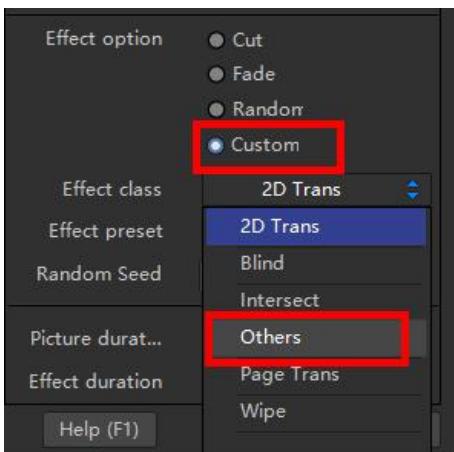

The buttons on the right side of the list from top to bottom: “Add”, “Delete”, “Empty”, “Up”,

“Down”, “Move to Home” and “Move to End”.

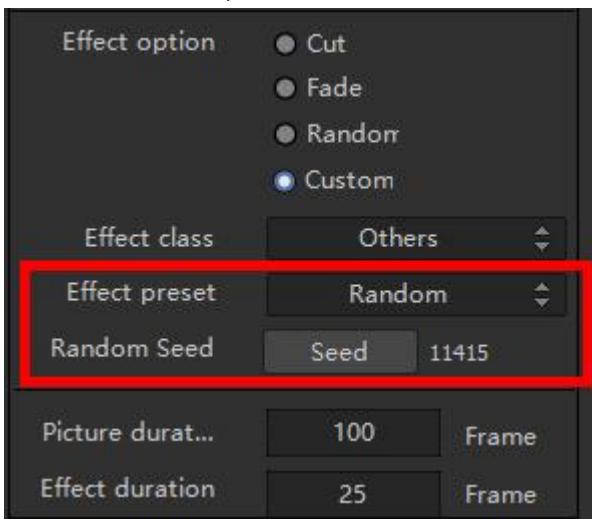

#### 4. Set Special Effect

Choose “Custom” in the Effect Option screen. Click “Effect Class”, select “Others” in the context menu.

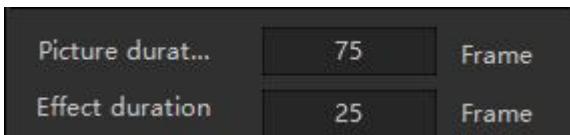

Click “Effect Preset”, select “Random” in the context menu.

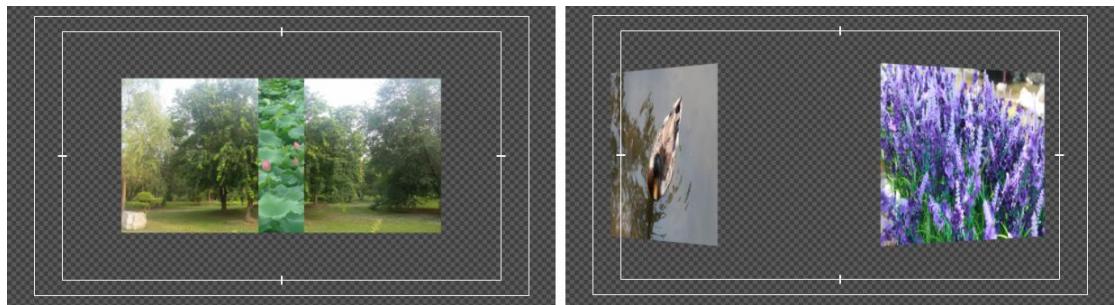

Click the “Seed” button behind Random Seed.

Set Picture duration and Effect duration numerical values as 75 and 25.

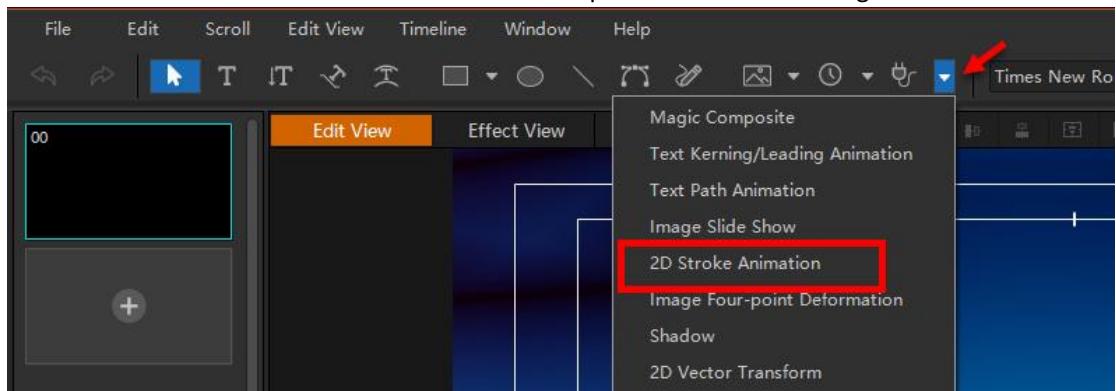

#### 5. Preview

## 11.5. 2D Stroke Animation

### ◆ Operation Flow of 2D Stroke Animation

Choose “2D Stroke Animation” button from the drop-down list of “Title Plugin”.

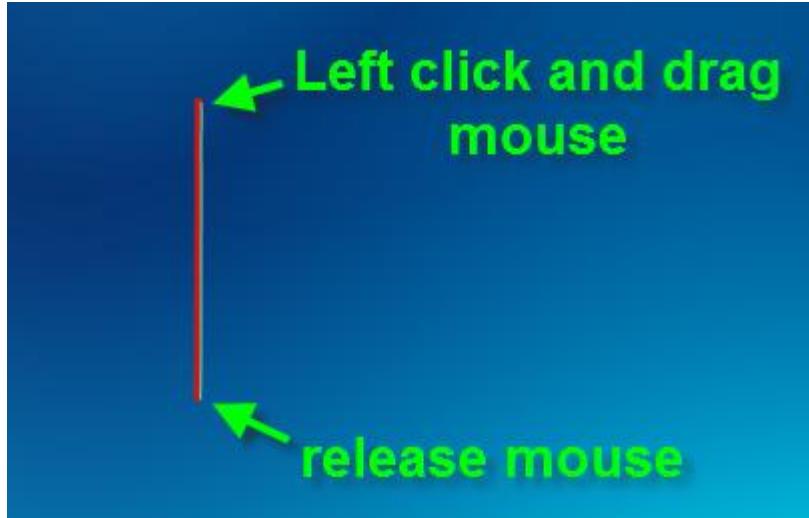

#### 1、Create Stroke Lines

1. Click “PaintStroke” in the tool bar.

2. Left-click in the Edit Screen, drag mouse to create StrokeLine01.

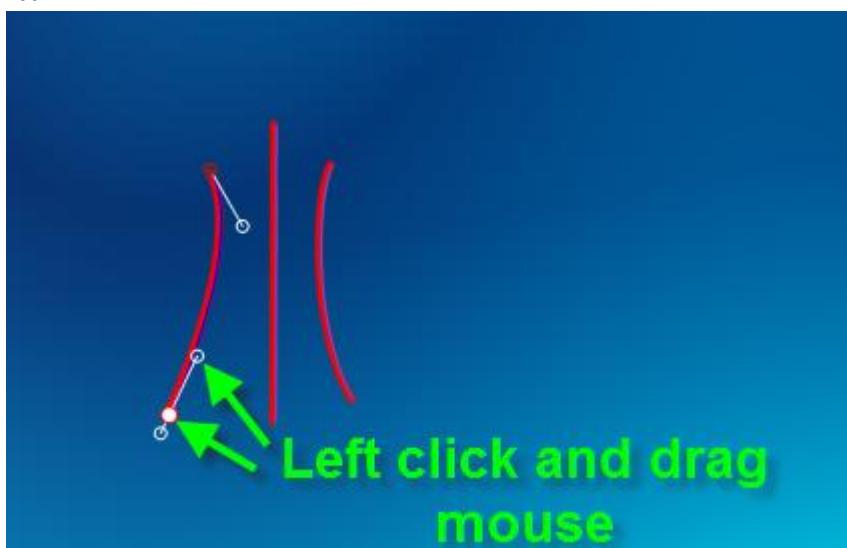

3. Use the same way to create StrokeLine02 and StrokeLine03.

2、Edit Bezier

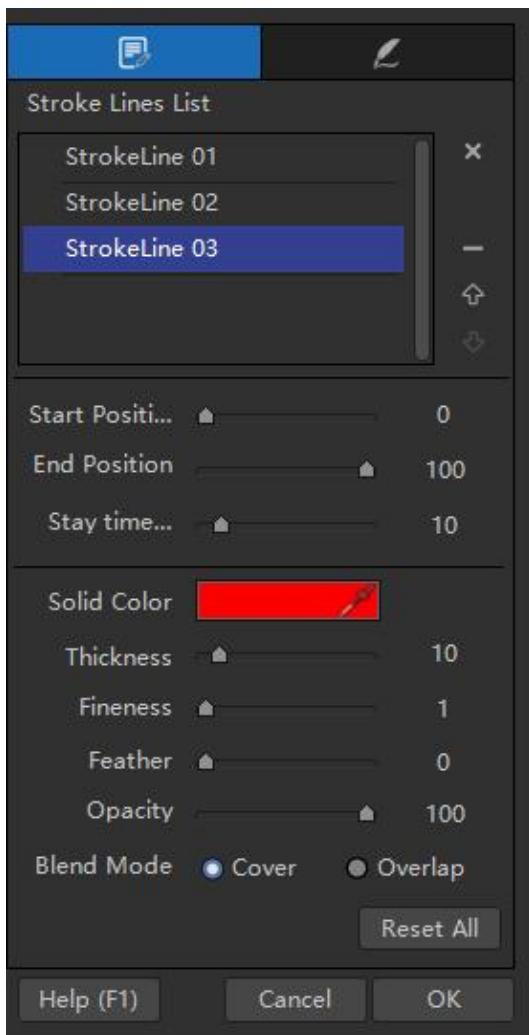

Left-click to select a stroke line in the Edit Screen, then double-click, or click “Bezier” in tool bar.

Drag control points to adjust.

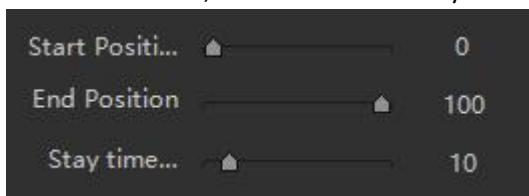

3、Set Properties

### Set Start Position and End Position

Left click to select a stroke line (for example StrokeLine 01) in the Stroke Lines List panel.

Set Start Position, End Position and Stay Time Ratio numerical value as 0, 100 and 0.

Use the same way to set properties parameters for StrokeLine 02 and StrokeLine 03.

### Shader

Click the Color button behind Solid Color.

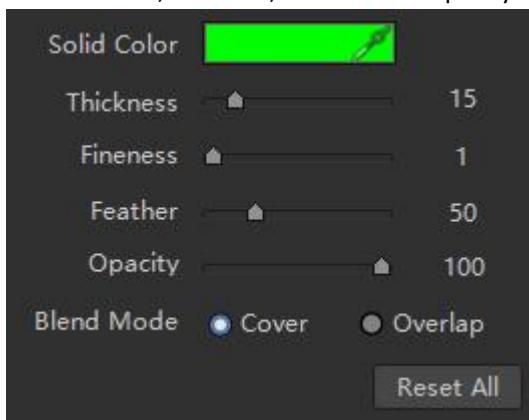

Select color in the Color Select window then click the "OK" button.

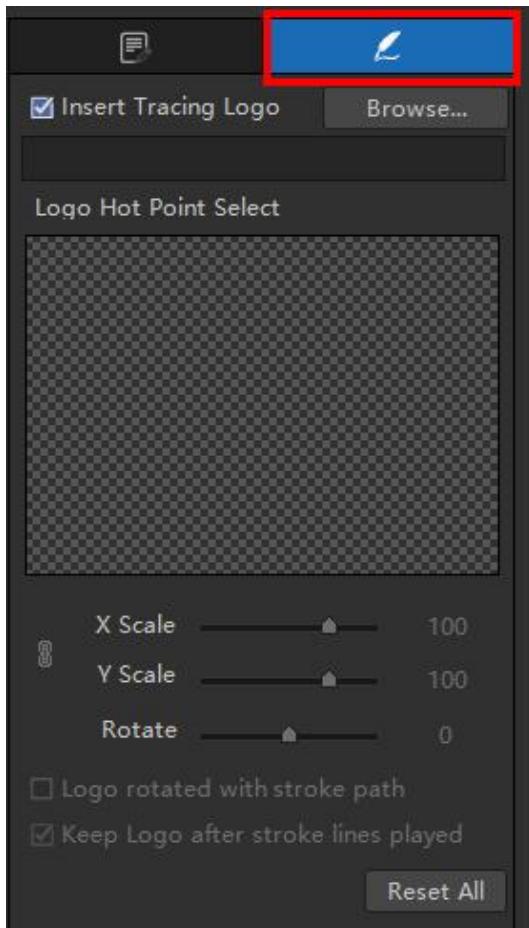

**Note:** this operation will change color of all stroke lines.

Set Thickness, Fineness, Feather and Opacity value as 15, 1, 50 and 100.

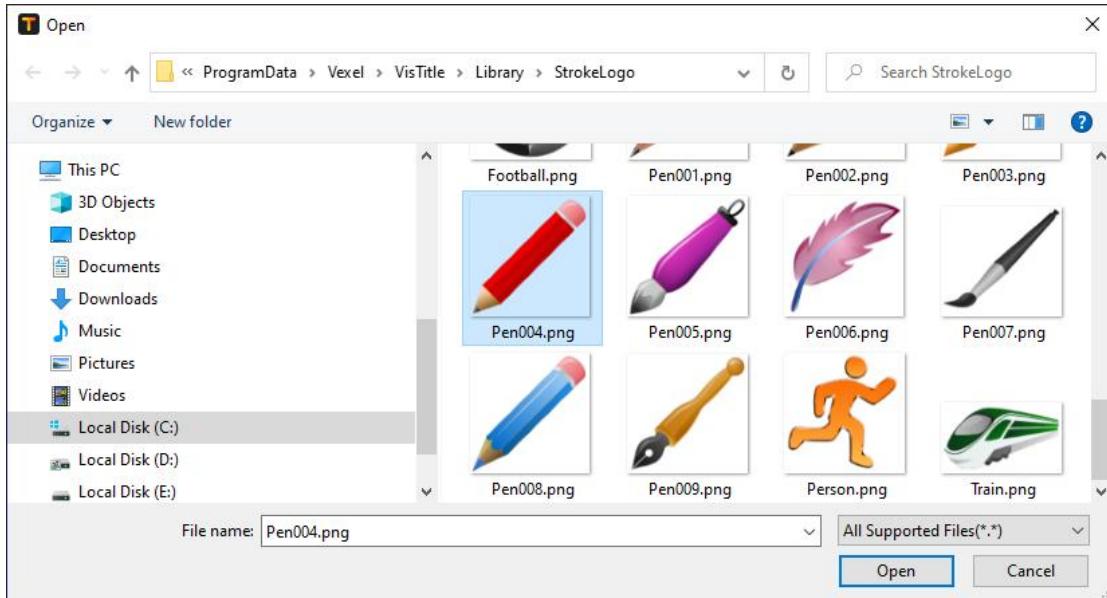

#### 4. Logo

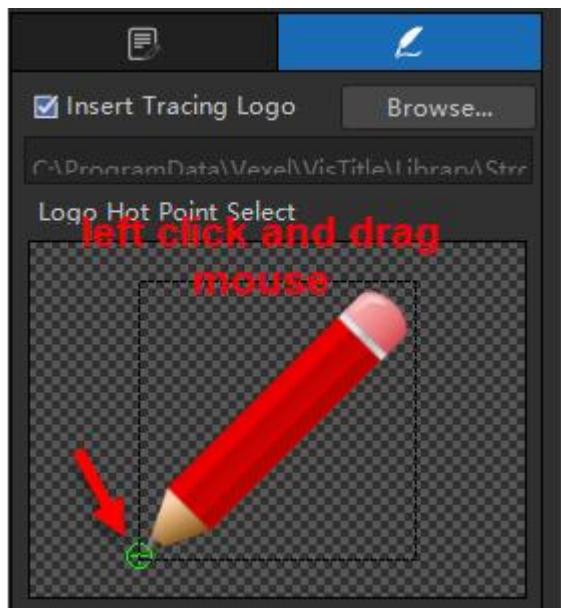

1. Click on the “Logo” button  to open Logo tab. Enable “Insert Tracing Logo”.

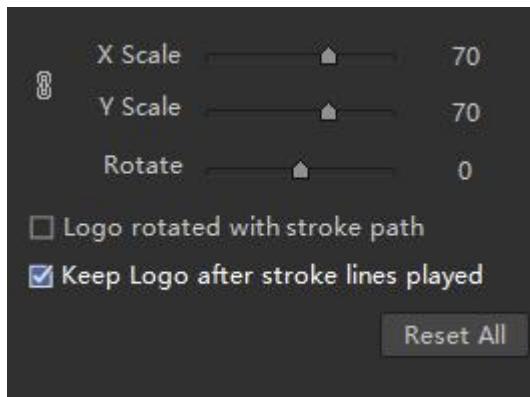

2. Click the "Browse" button then select a logo, click the "Open" button.

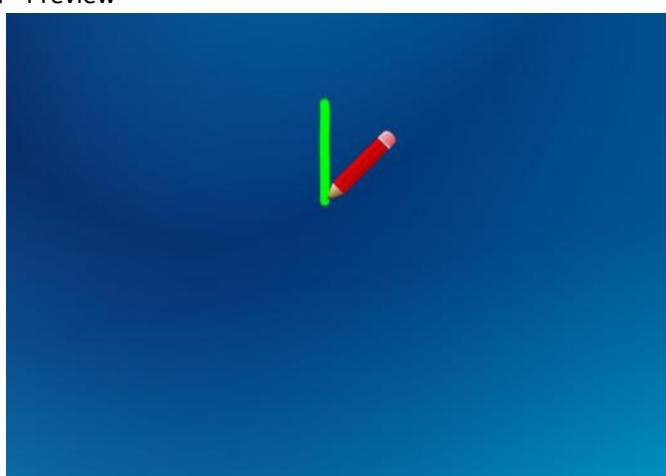

3. Left click and drag the hot point to set logo hot point position.

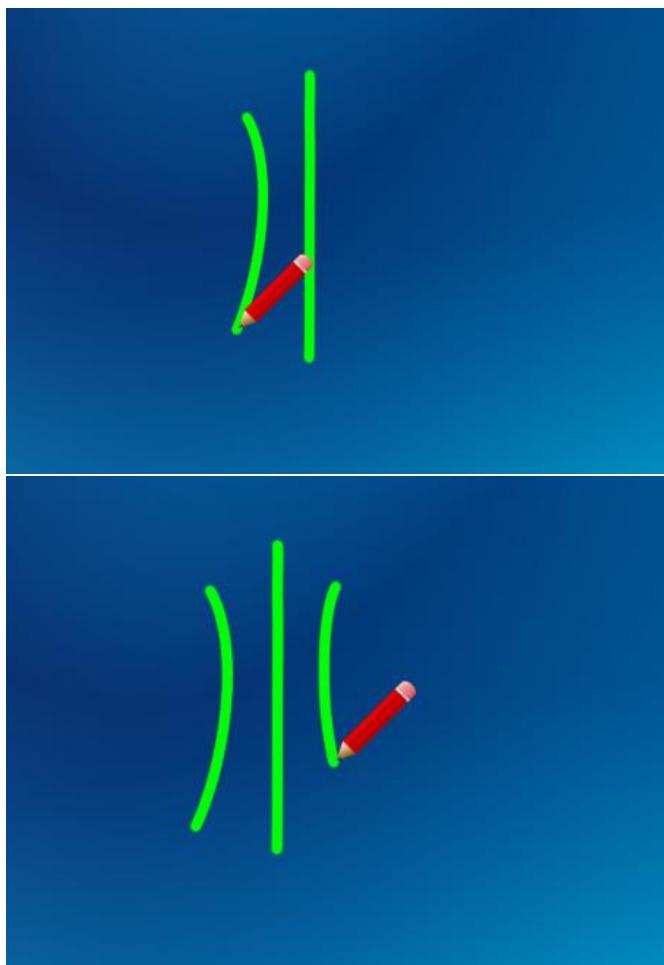

4. Set X Scale value, Y Scale value and Rotate value as 70, 70 and 0.

5. Preview

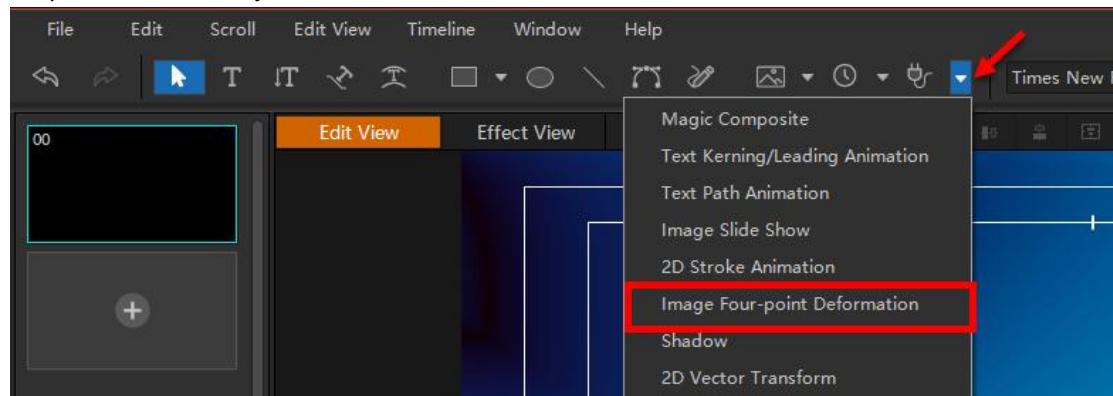

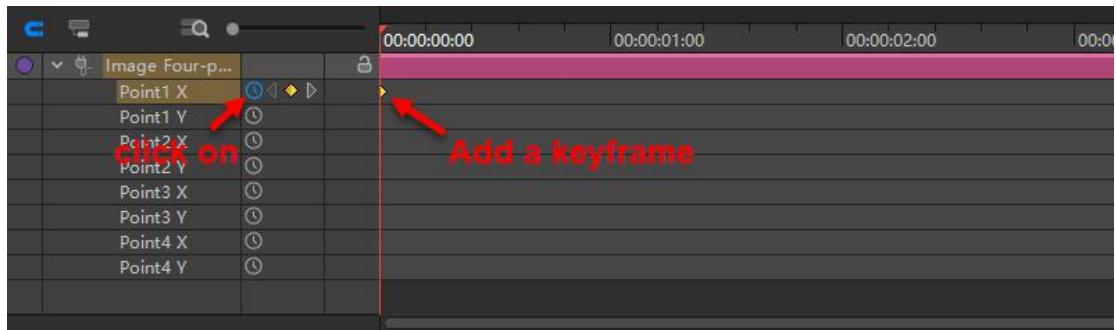

## 11.6. Image Four-point Deformation

### ◆ Operation Flow of Image Four-point Deformation

Create an image object in Edit Screen, choose “Image Four-point Deformation” button from the drop-down list of “Object” in tool bar.

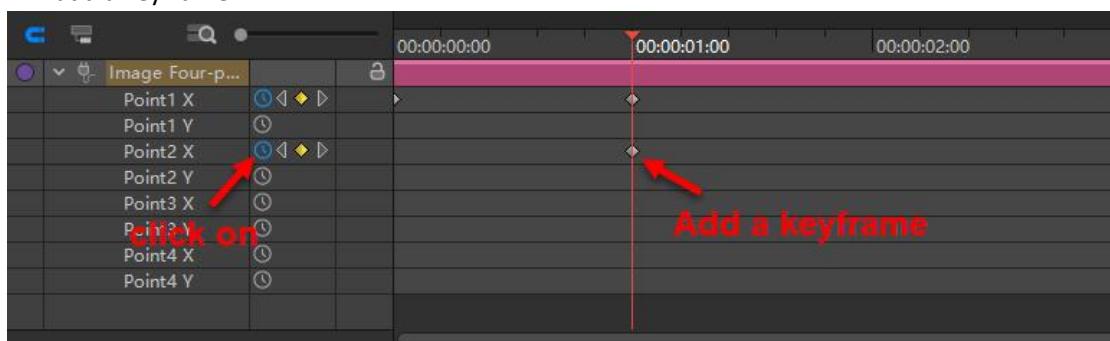

1. Click on Point1 in Edit Screen, “Add/Remove Keyframe” button after Point1x in timeline window, you can apply and add a keyframe at 0 second position.

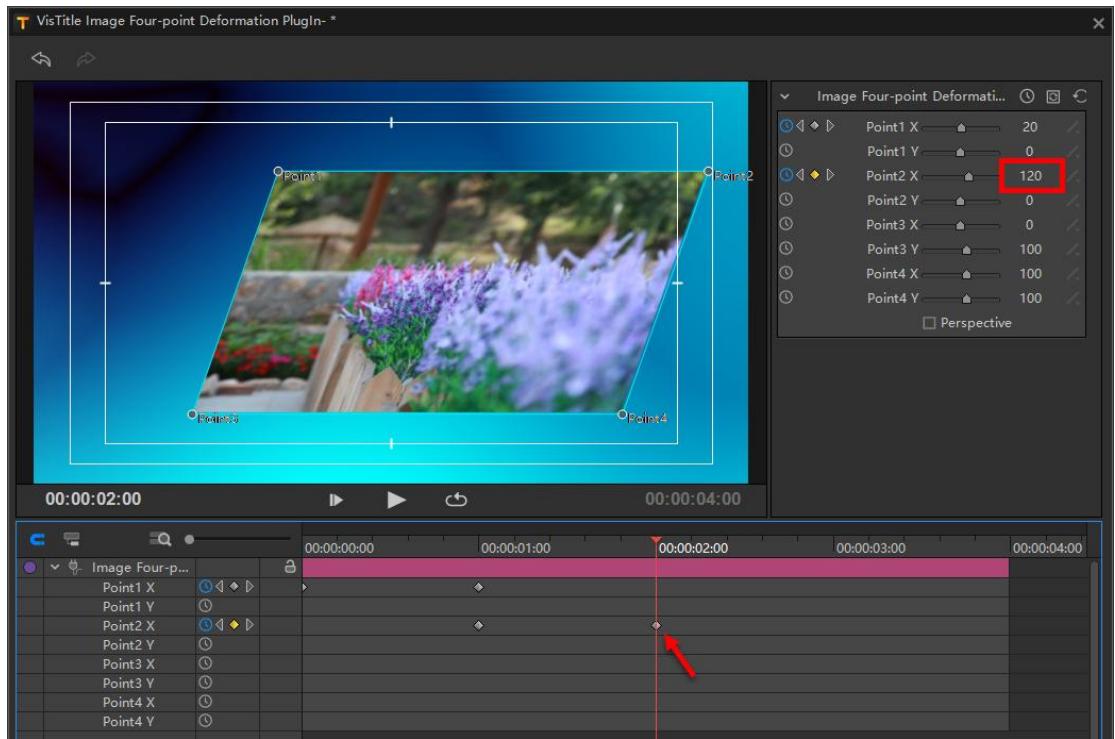

Add a keyframe at 1 second position, set the keyframe value as 20.

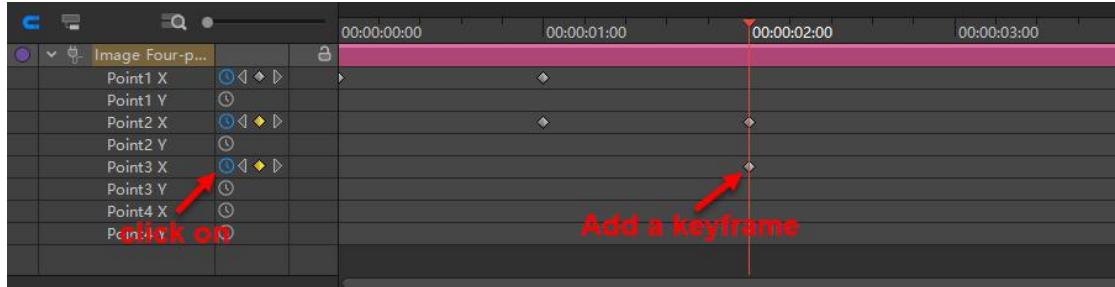

- Click on Point2 in Edit Screen, move timeline to 1 second position, then click on "Add/Remove Keyframe" button after Point2x in timeline window, thus, you can apply and add a keyframe.

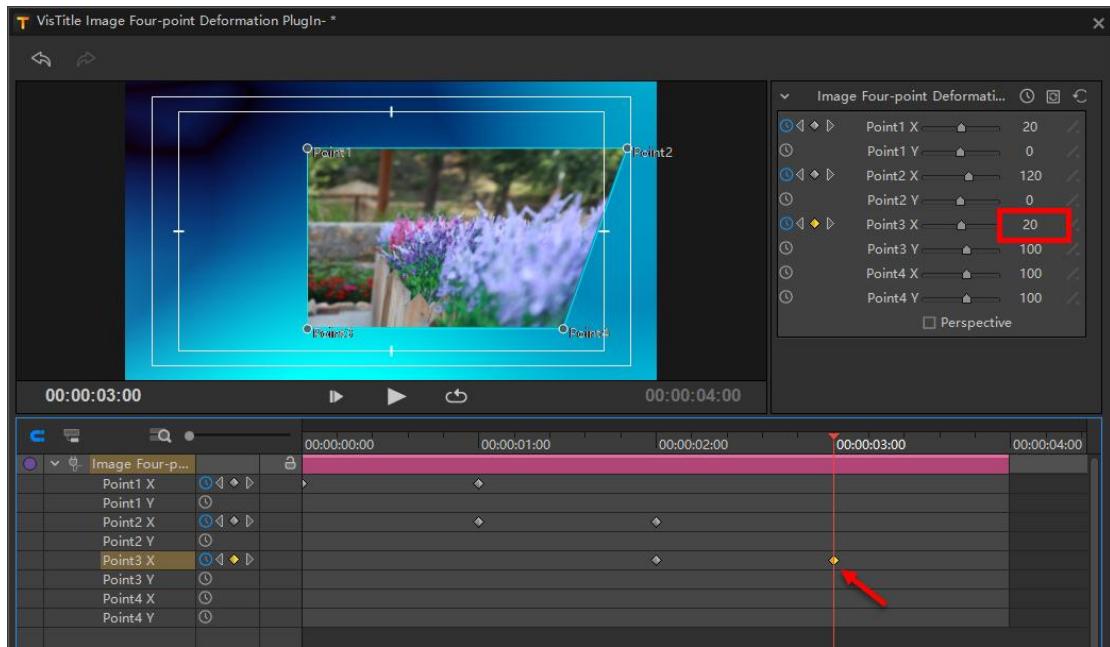

Move timeline to 2 second position, then click on "Add/Remove Keyframe" button to add a keyframe, Set the keyframe value as 120.

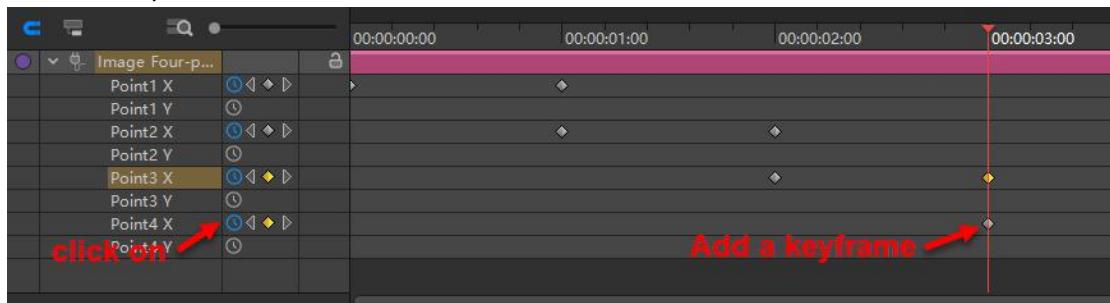

3. Click on Point3 in Edit Screen, move timeline to 2 second position, then click on “Add/Remove Keyframe” button after Point3x in timeline window. Thus, you can apply and add a keyframe.

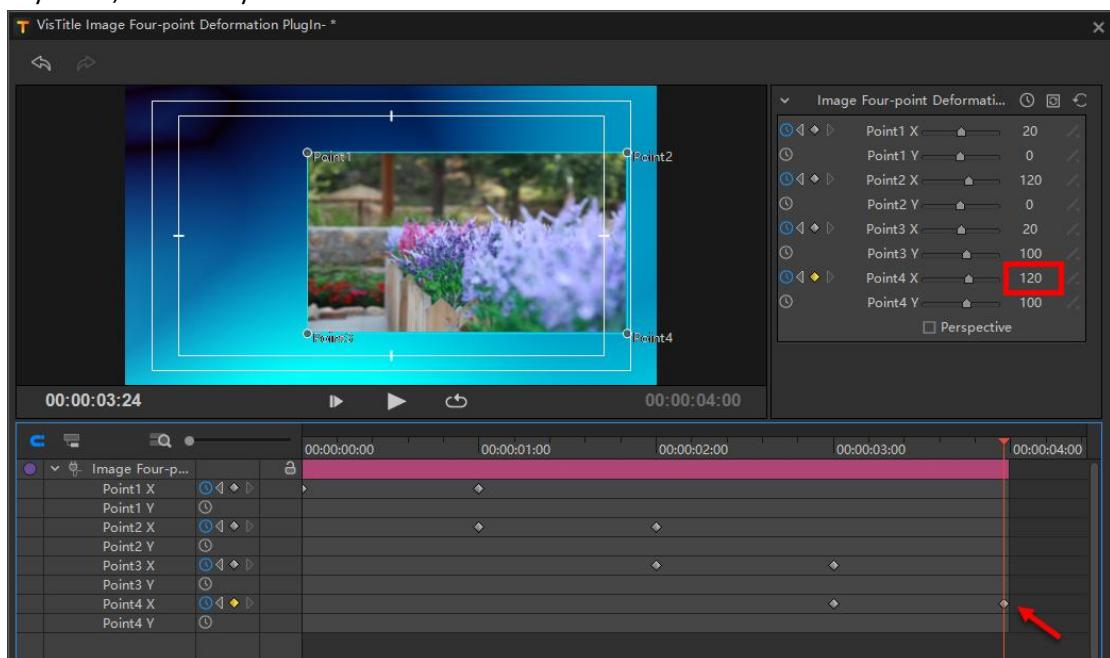

Move timeline to 3 second position, then click on “Add/Remove Keyframe” button to add a keyframe, Set the keyframe value as 20.

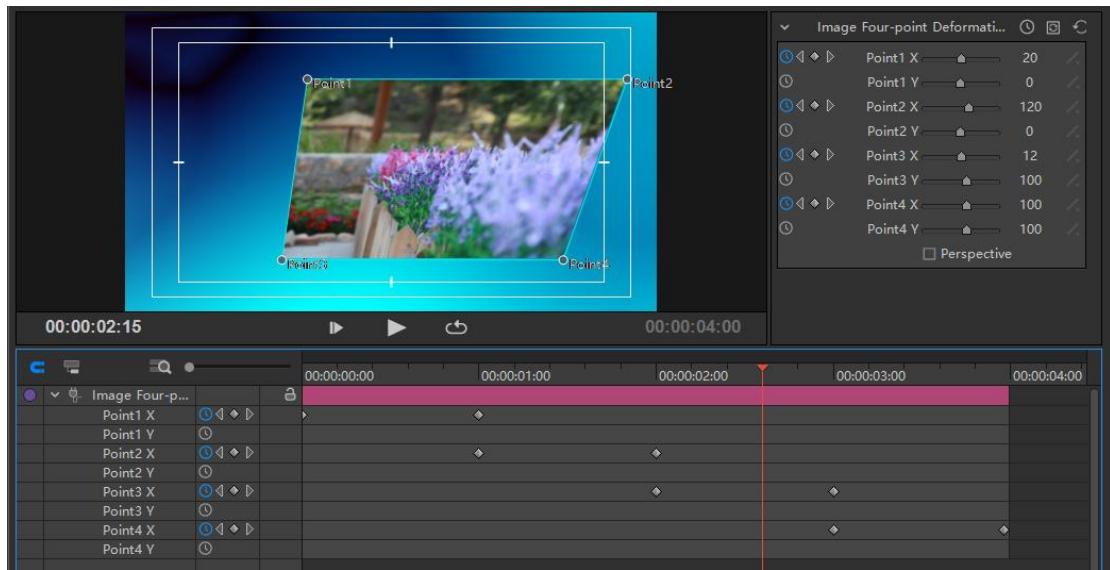

- Click on Point4 in Edit Screen, move timeline to 3 second position, then click on “Add/Remove Keyframe” button after Point4x in timeline window. Thus, you can apply and add a keyframe.

Move timeline to 4 second position, then click on “Add/Remove Keyframe” button to add a keyframe, Set the keyframe value as 120.

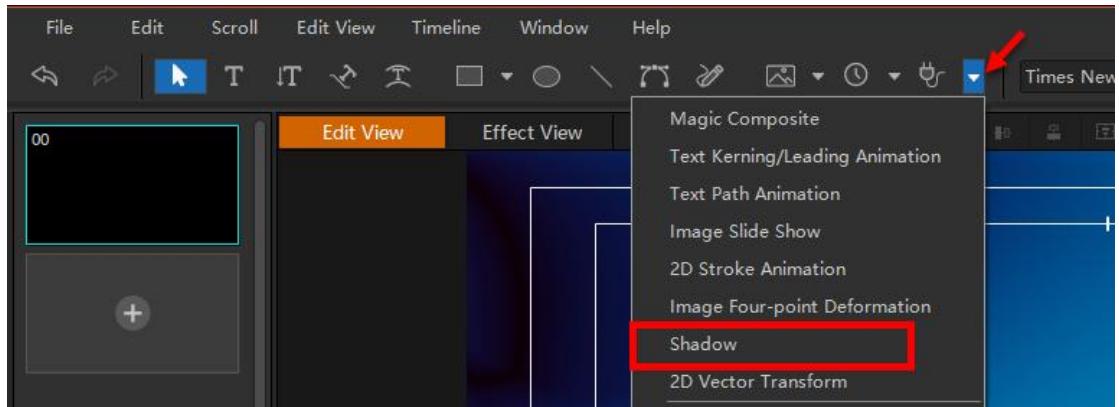

- Preview

## 11.7. Shadow

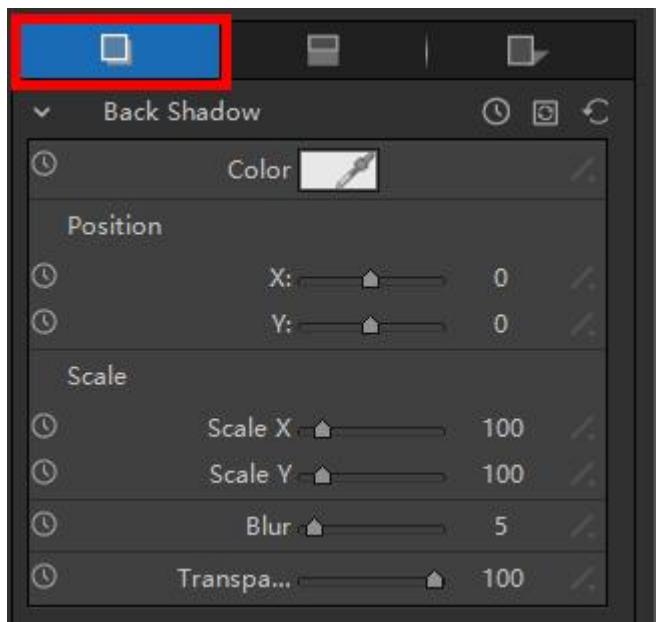

### ◆ Operation Flow of Shadow

Create an object in Edit Screen, choose “Shadow” button from the drop-down list of “Object” in tool bar.

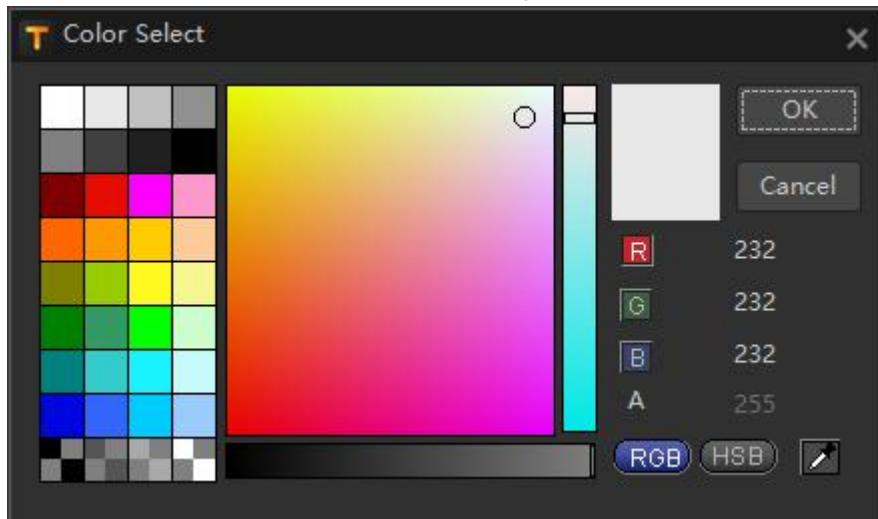

### 11.7.1. Back Shadow

Click on “Back Shadow” button in Property panel.

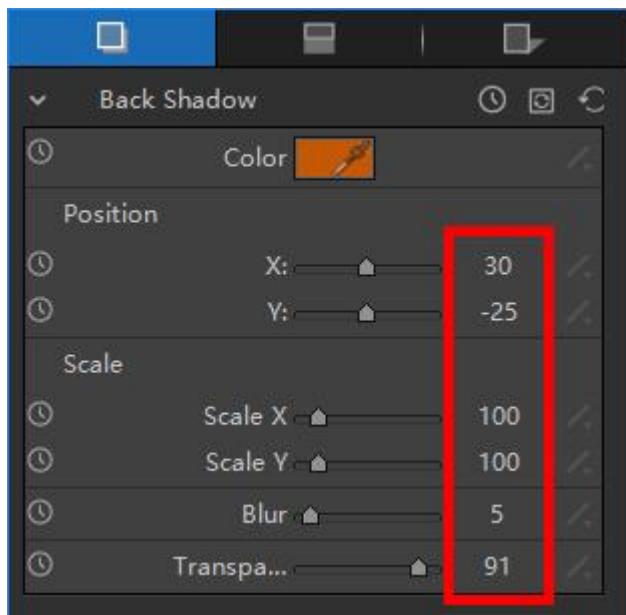

Click on the Color button, select a color, then press the "OK" button.

◆ Still Shadow

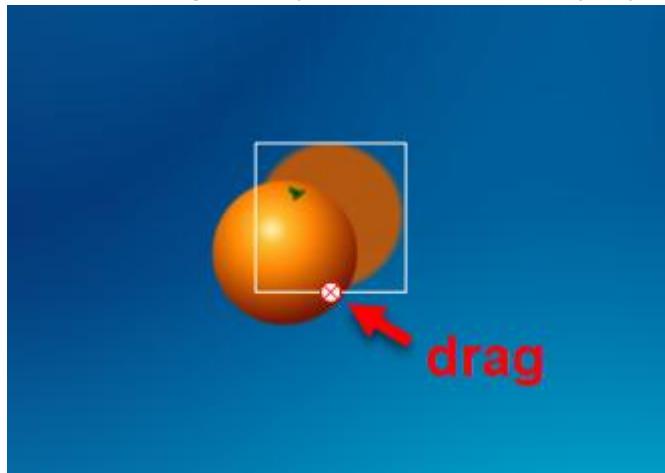

Step-1 Setting parameters in back shadow properties panel.

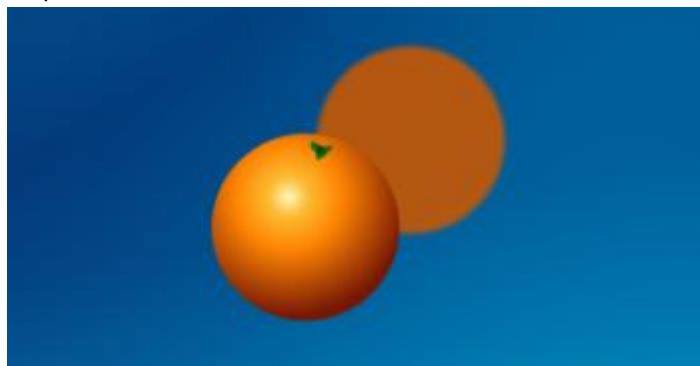

Click on "Translation" button in tool bar.

You can also drag control point in editor area to adjust positions in the X and Y axis.

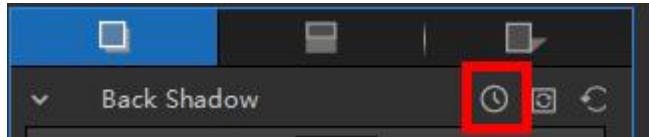

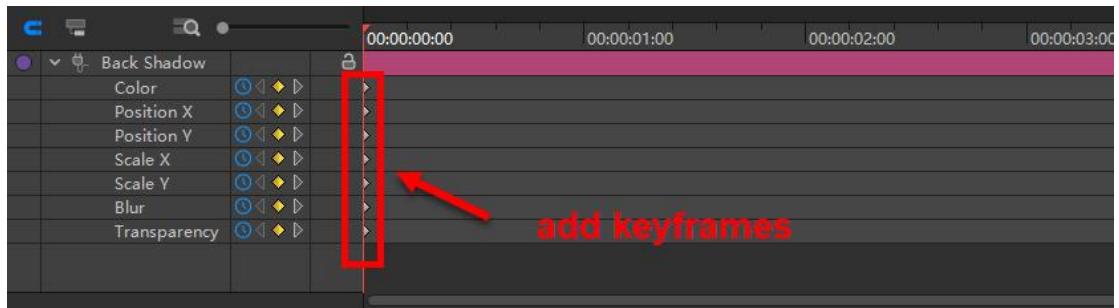

Step-2 Preview

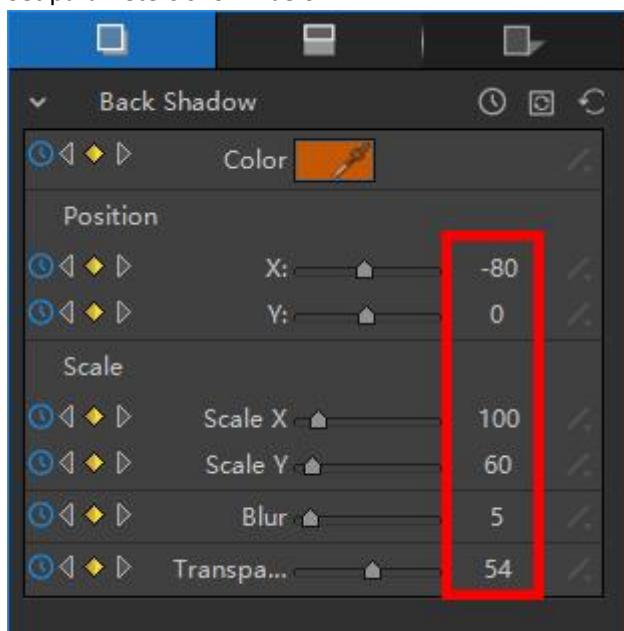

#### ◆ Dynamic Shadow

Step-1 Adjust timeline to 0 second position, click on the "All Parameters Animating" button.

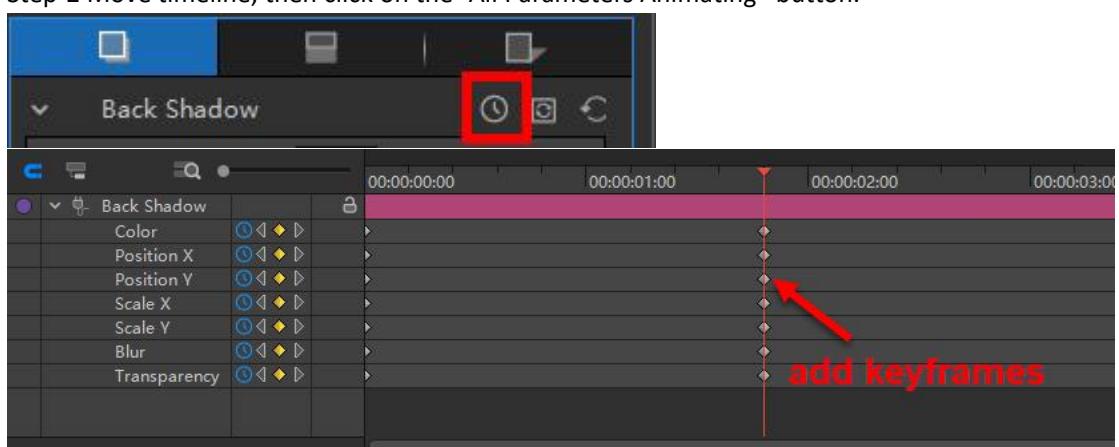

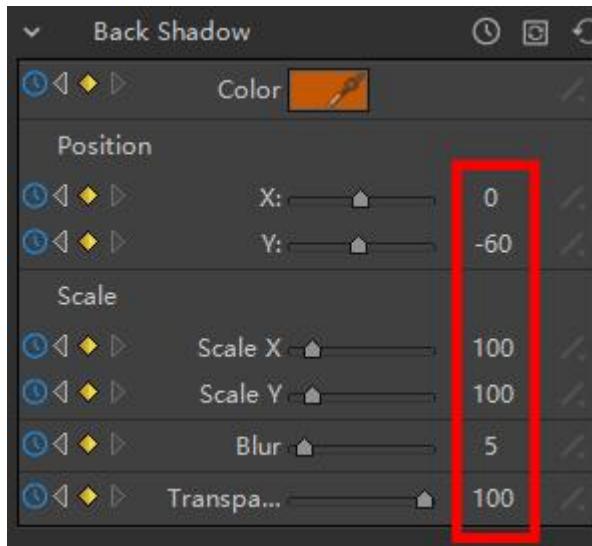

Set parameters shown below.

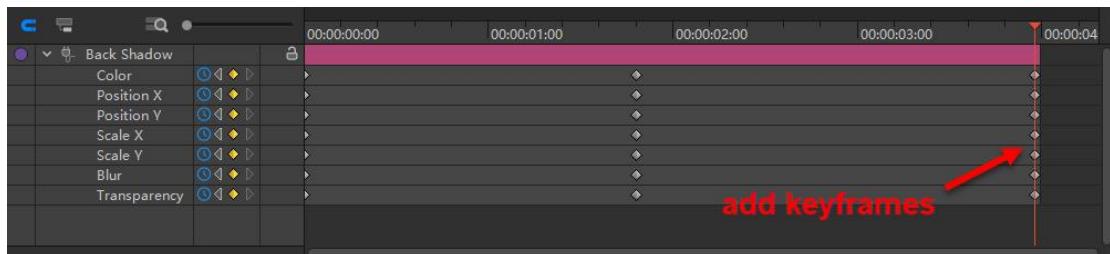

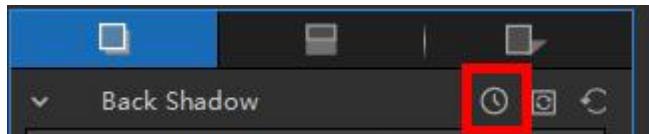

Step-2 Move timeline, then click on the “All Parameters Animating” button.

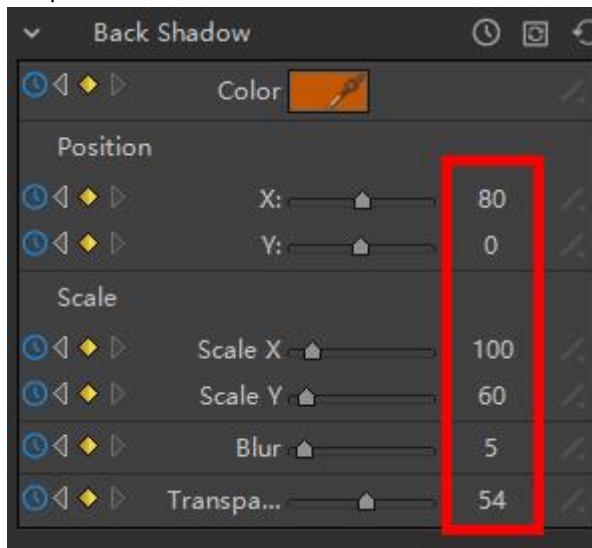

Set parameters shown below.

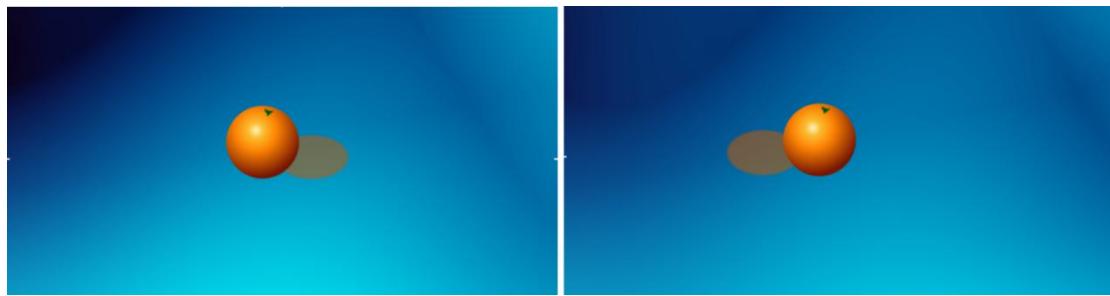

Move timeline to the tail frame position, click on "All Parameters Animating" button.

Set parameters shown below.

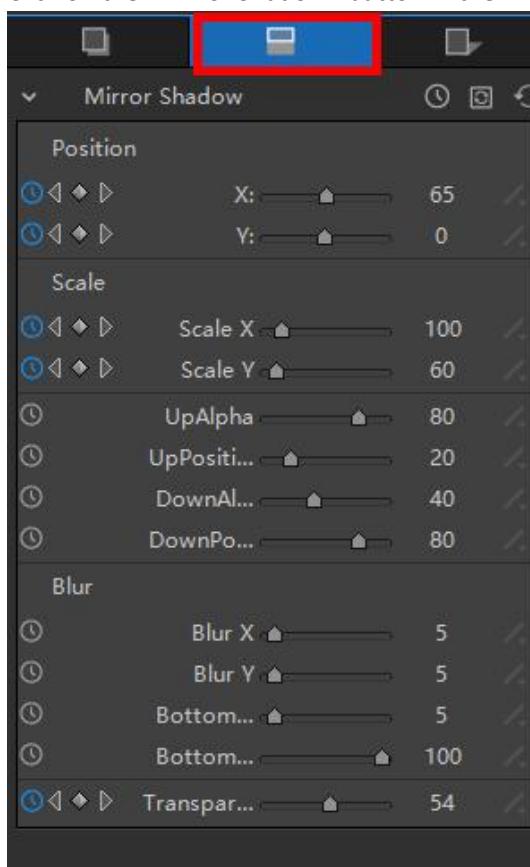

Step-4 Preview

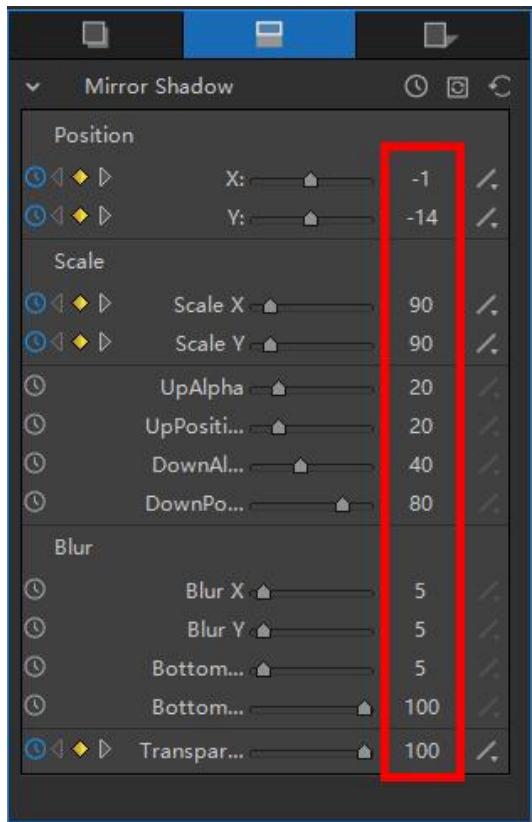

### 11.7.2. Mirror shadow

Click on the “Mirror Shadow” button in the Property panel.

Still Shadow

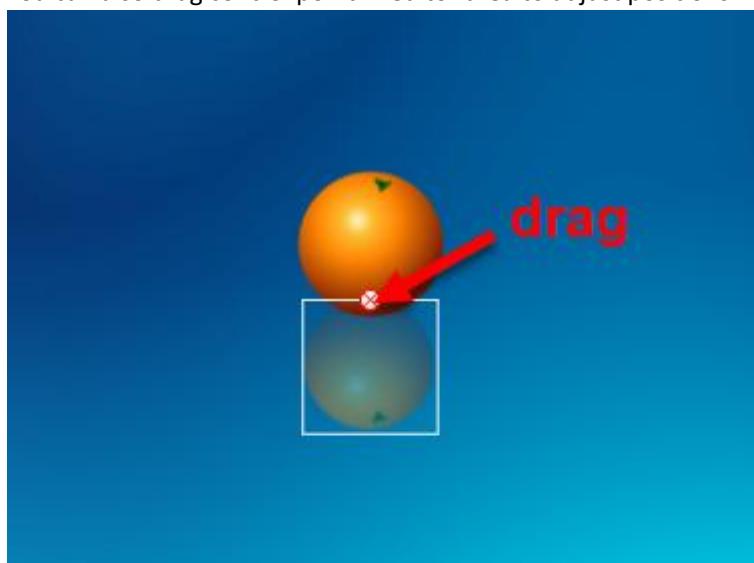

Step-1 Setting parameters in mirror shadow properties window.

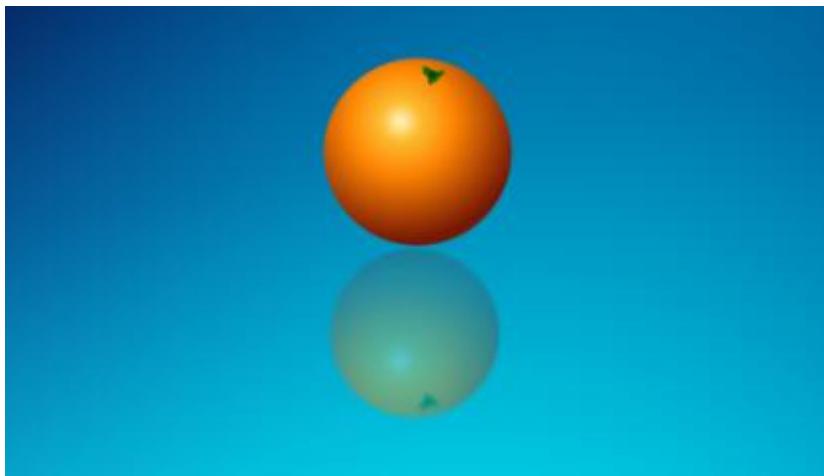

Click on "Translation" in tool bar.

You can also drag control point in editor area to adjust positions in the X and Y axis.

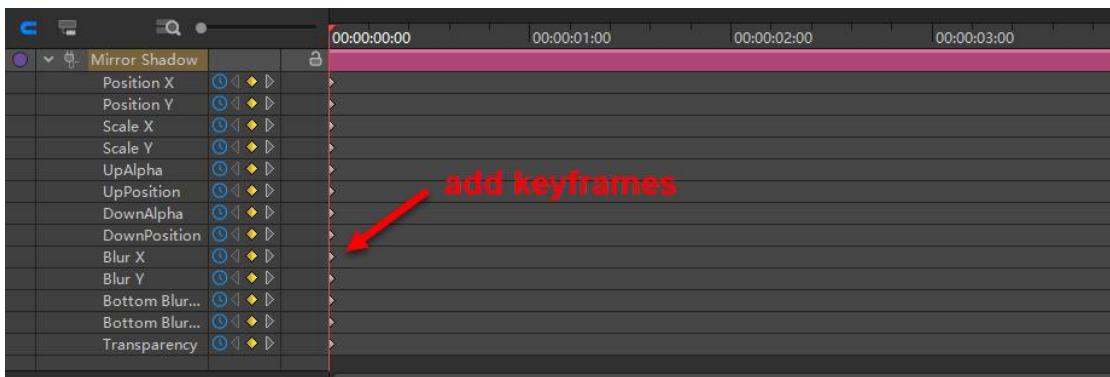

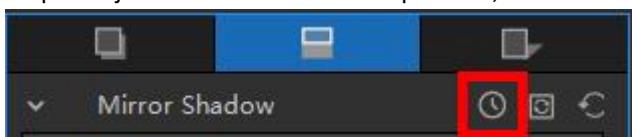

Step-2 Preview

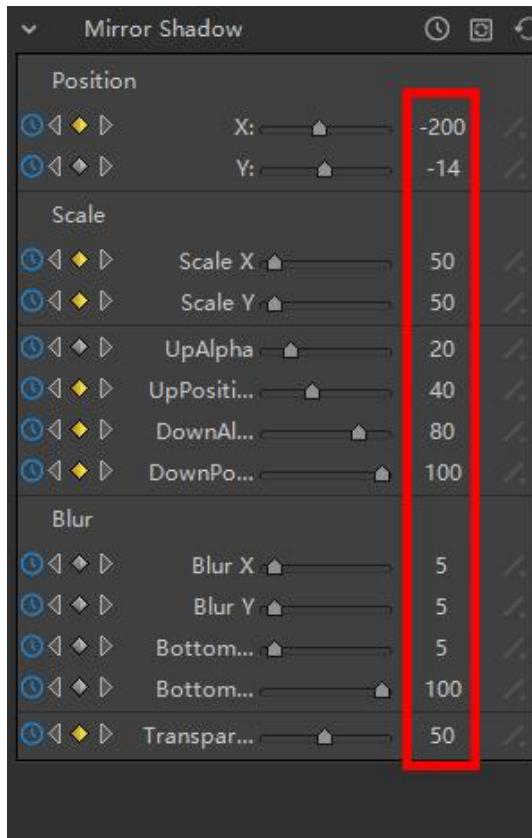

◆ Dynamic Shadow

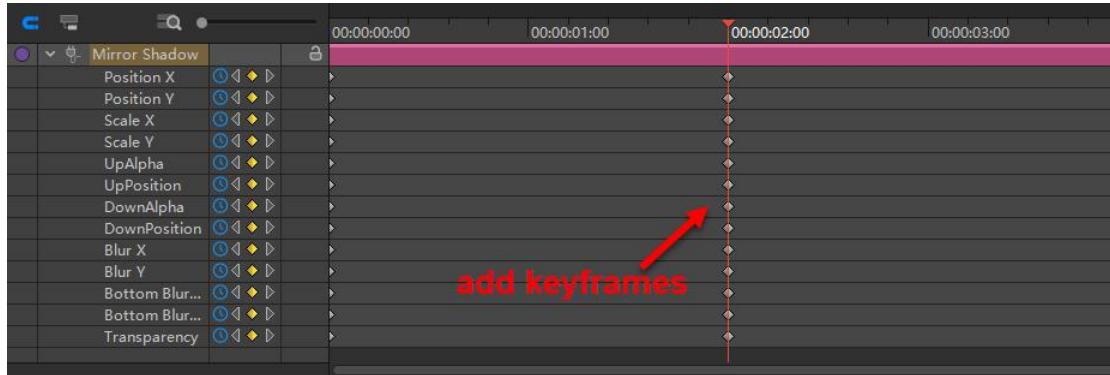

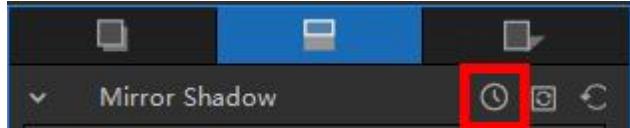

Step-1 Adjust timeline to 0 second position, click on the “All Parameters Animating” button.

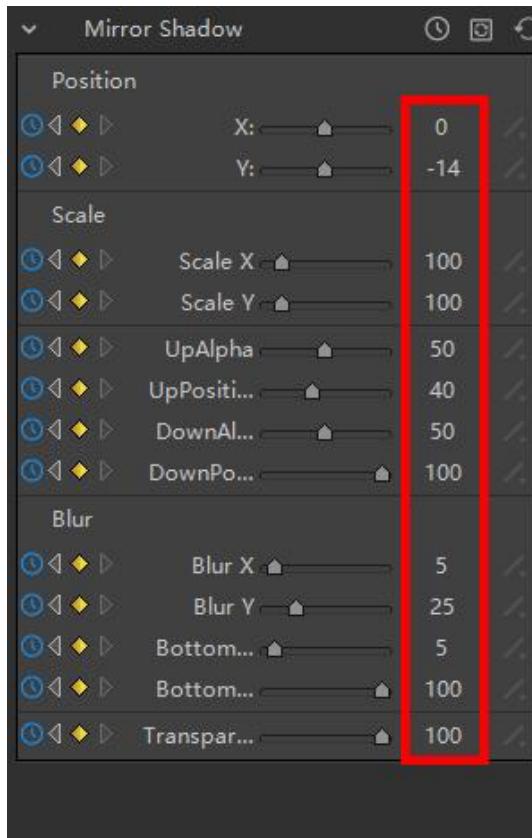

Set parameters shown below.

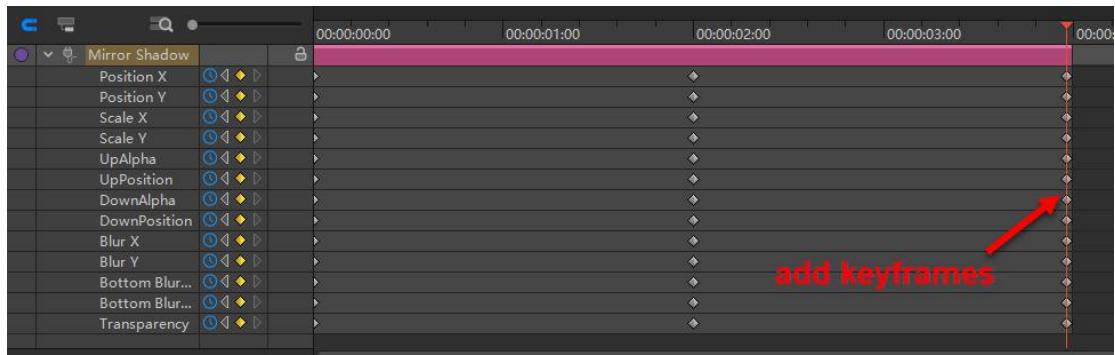

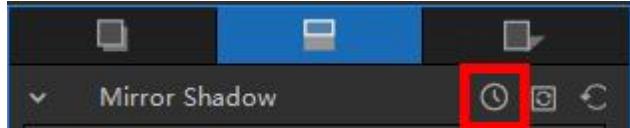

Step-2 Move timeline, then click on the “All Parameters animating” button.

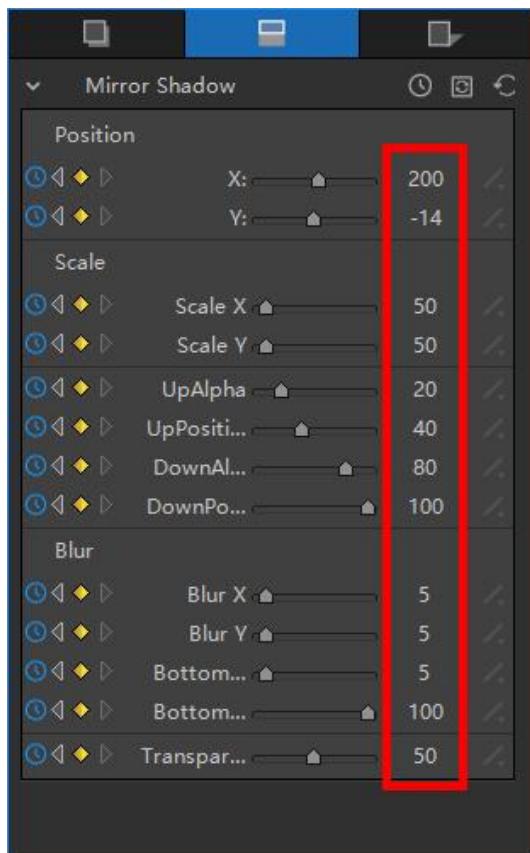

Set parameters shown below.

## 11.9. Karaoke

### ◆ Operation Flow of Karaoke

Choose “Karaoke” button from the drop-down list of “Title Plugin”.

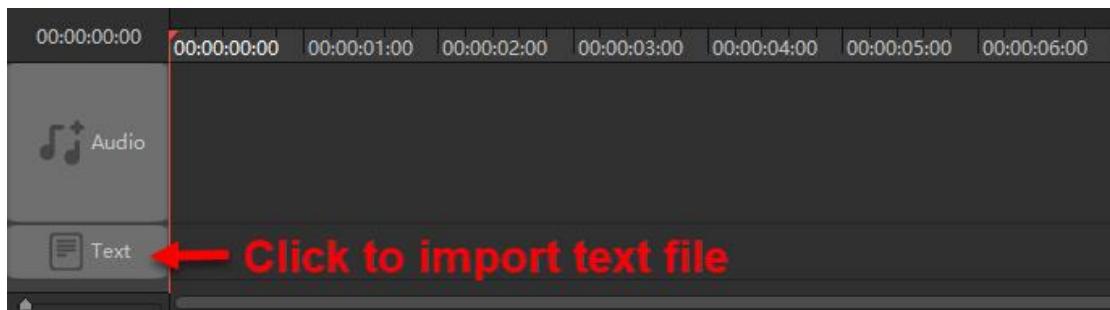

1、Import File

1) Import Text

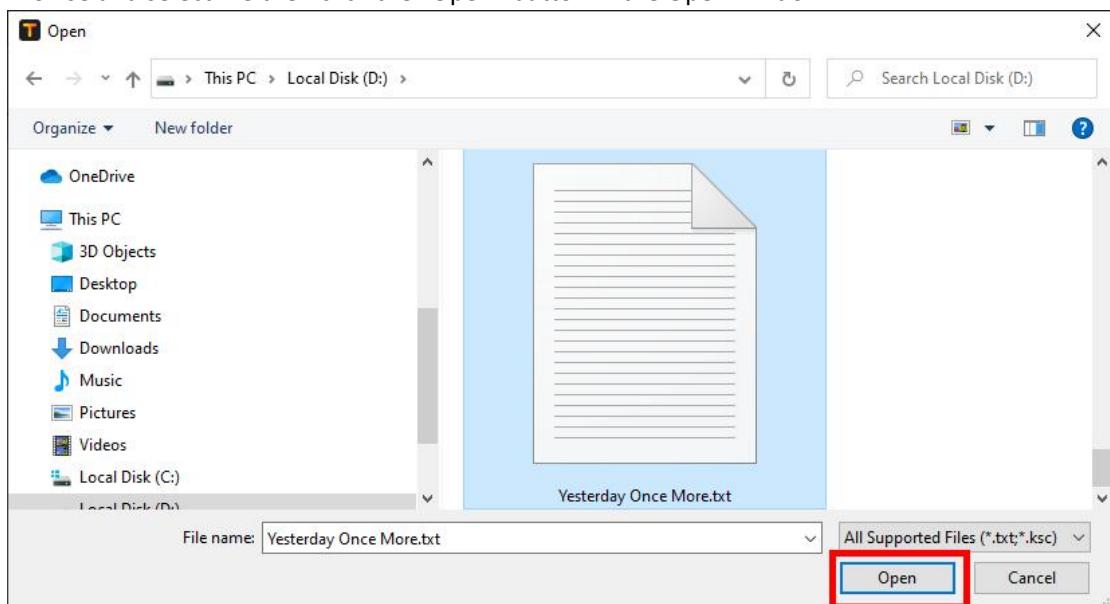

Method 1: click the “Import Text” button  in the File menu.

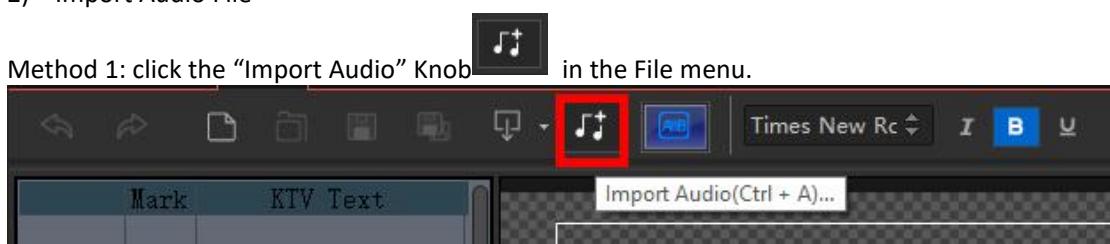

Method 2: left-click on the text track head in the timeline panel.

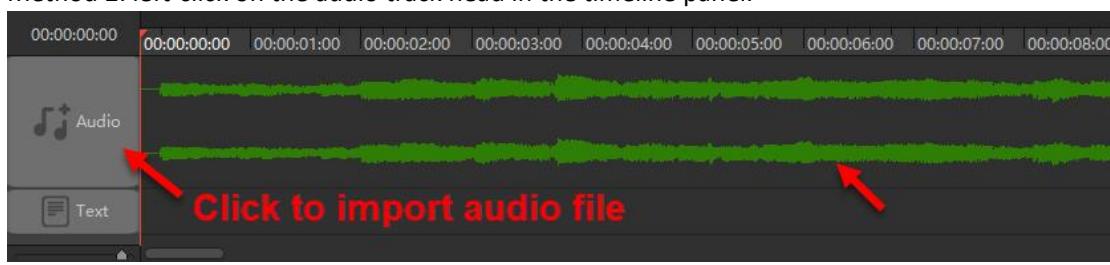

Browse and select file then click the “Open” button in the Open window.

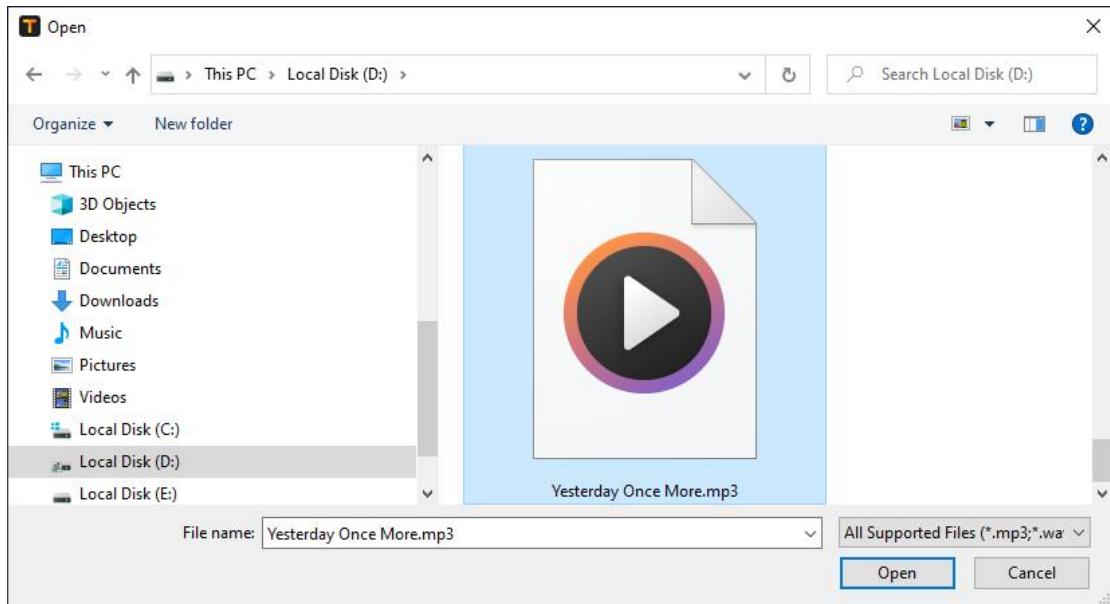

## 2) Import Audio File

Method 1: click the “Import Audio” Knob in the File menu.

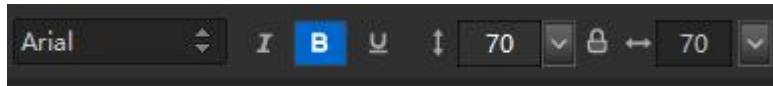

Browse and select \*.mp3 file, \*.wav file then click “Open” button.

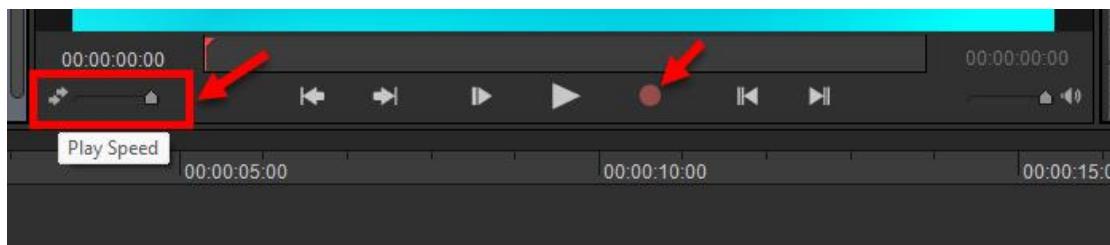

## 2、 Set Font Properties

Set font as Arial, Bold and size as 70 in tool bar.

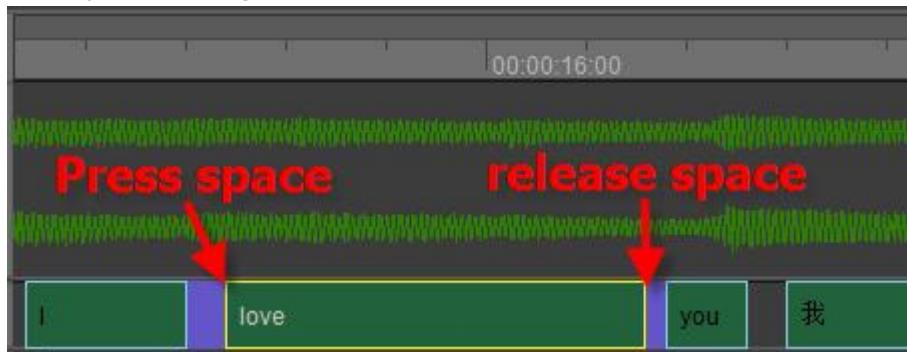

## 3、 Record Karaoke

Adjust play speed and volume then click the “Record” button.

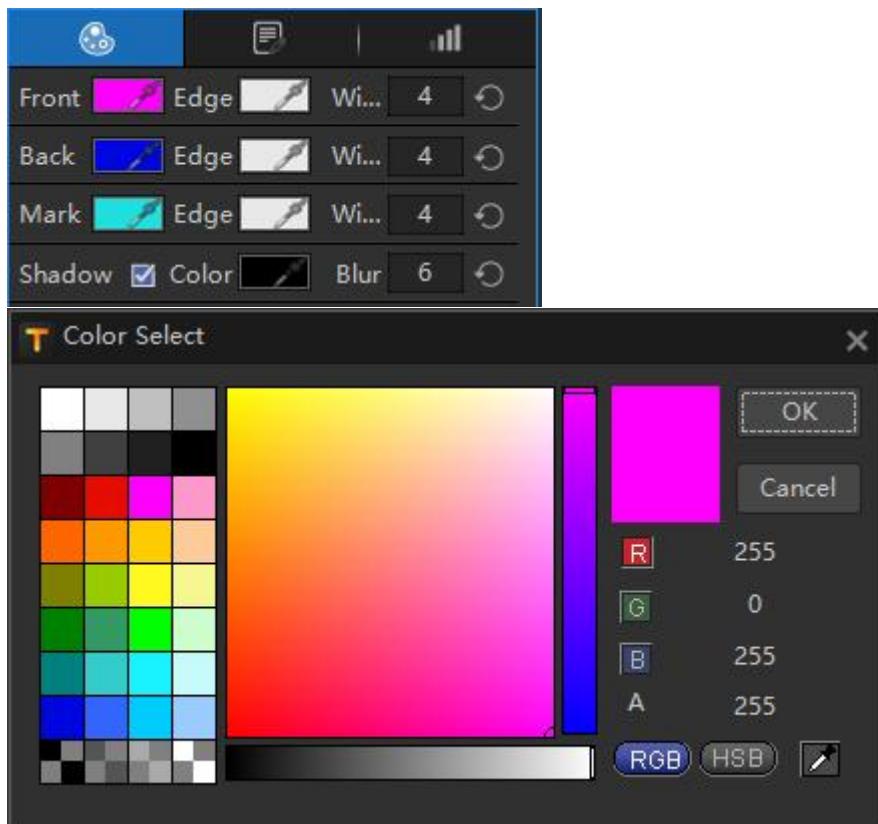

Press **Space** as the sign of timein and release as timeout.

## 4、 Shader

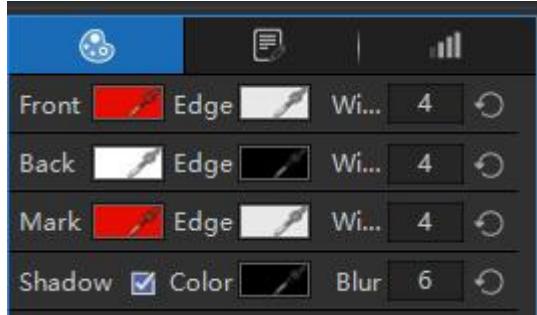

Click Color button behind Front, choose color in the popup Color Select window.

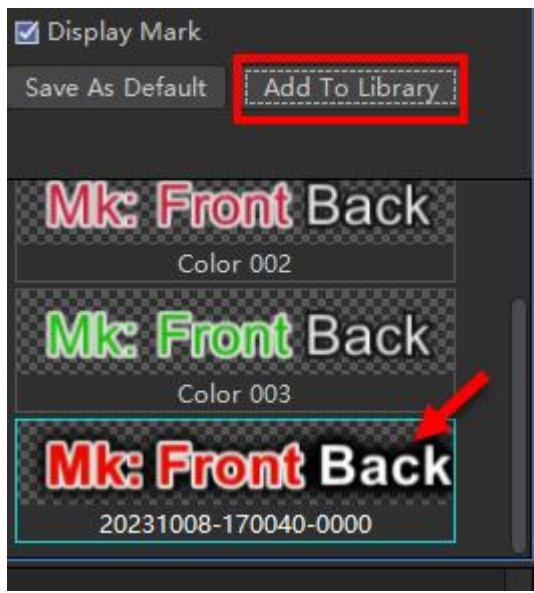

Left click in the Width numerical value frame, input number 4.

Back color setting methods are the same as front color setting.

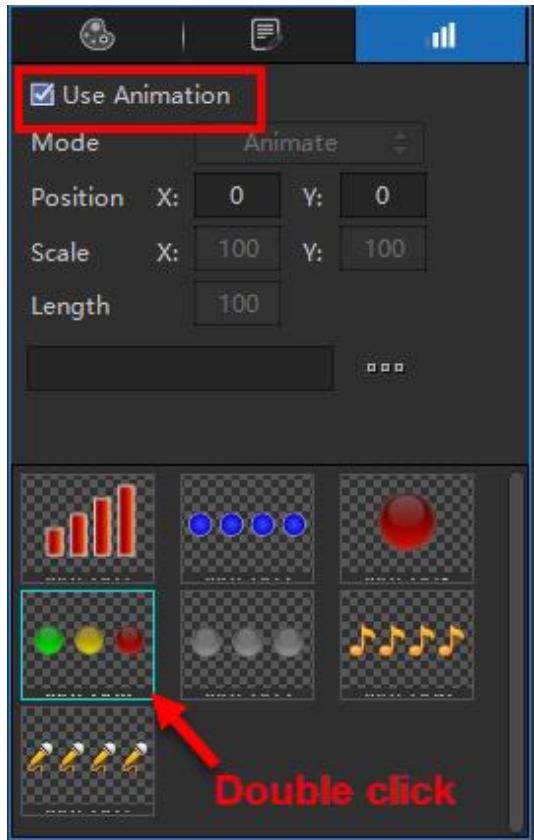

Click the "Add to Library" button to save the current shader template to library.

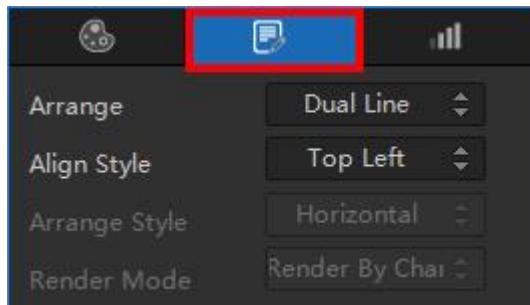

#### 5、 Set Animation Properties

Click the “Animate” button to switch to animation property setting panel. Activate “Use Animation”. In the animation library, double click to choose template.

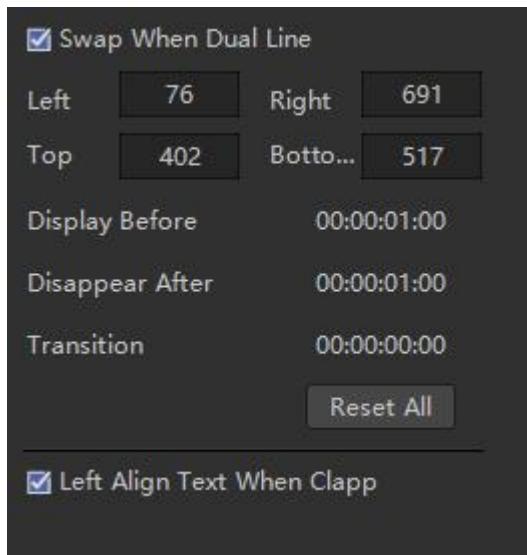

#### 6、 Basic Property

Click the “Property” button to switch to property setting panel. Click to choose “Dual Line” and “Top Left” in the drop-down lists of Arrange and Align Style.

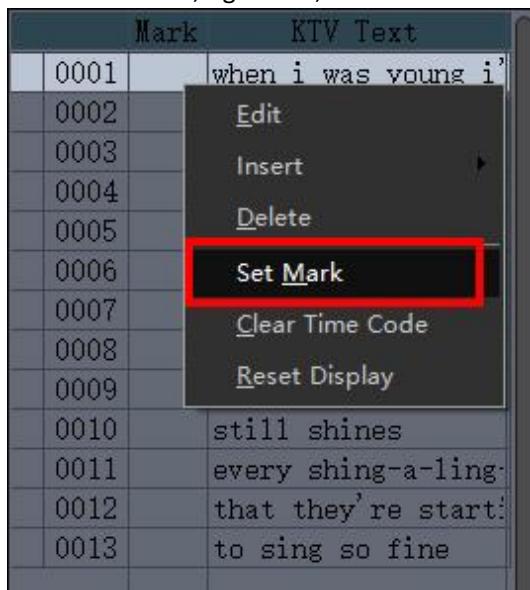

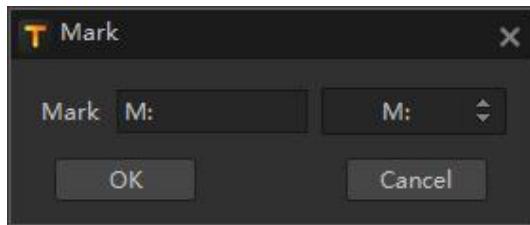

Enable “Swap When Dual Line” and set Left, Right, Top and Bottom value as 76, 691, 402 and 517.

## 7、 Set Mark

Select a text line, right click, select “Set Mark” in the context menu, Mark dialog pops out.

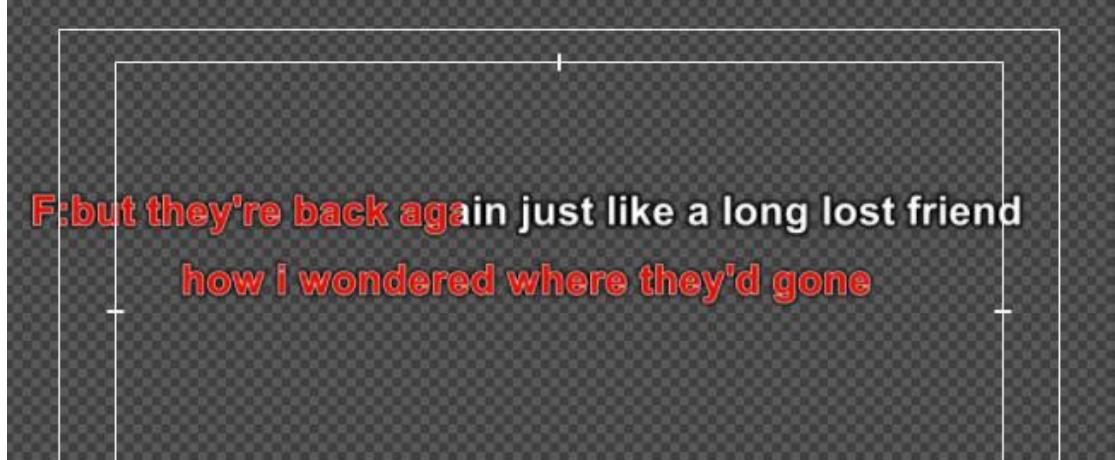

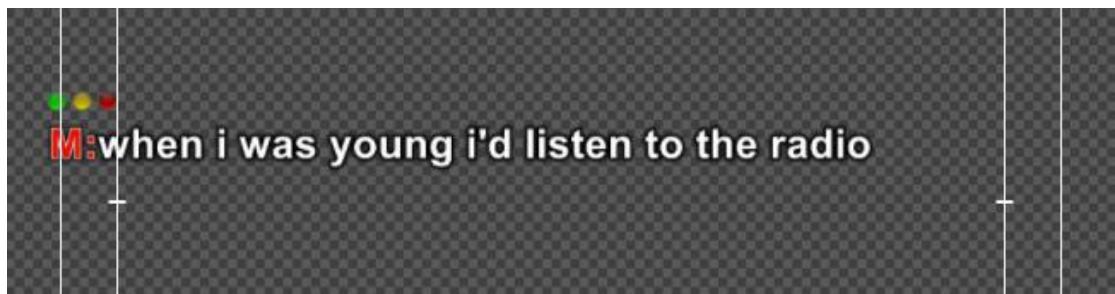

Click on the drop-down menu marked in the picture above, to choose marks such as M, F and T.

Mark	KTV Text
0001	M: when i was young i'

## 11.10. Handwriting

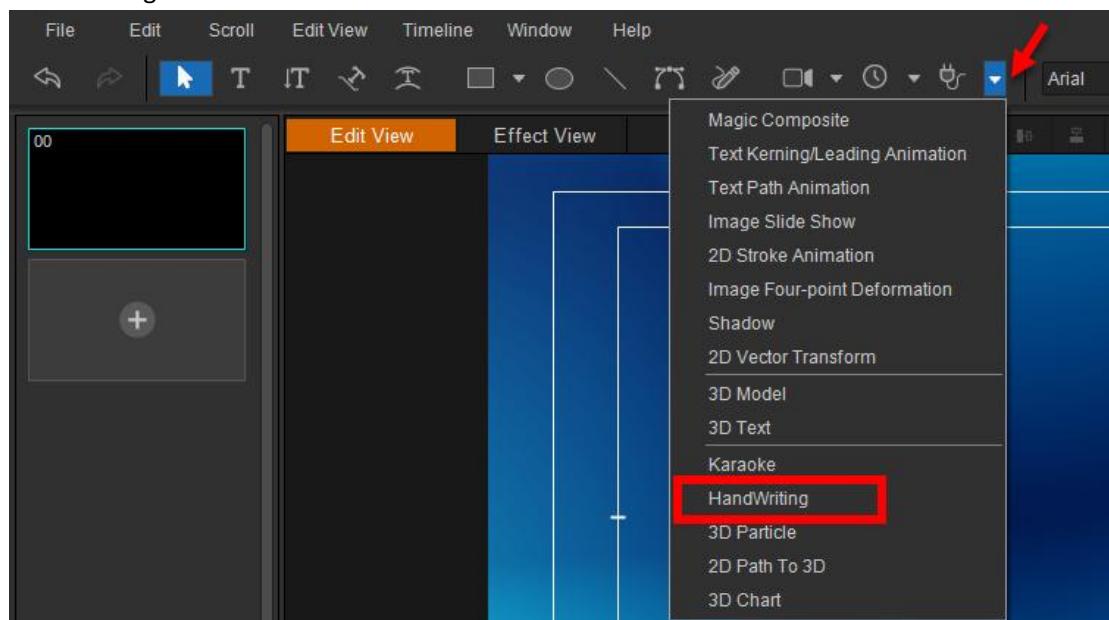

### 11.10.1. Brief Introduction

Using handwriting plugin can make general handwriting effect. Stroke radius and stroke speed will be set different values according to different requirement. You can edit color property of every stroke. Or applying original alpha to set color.

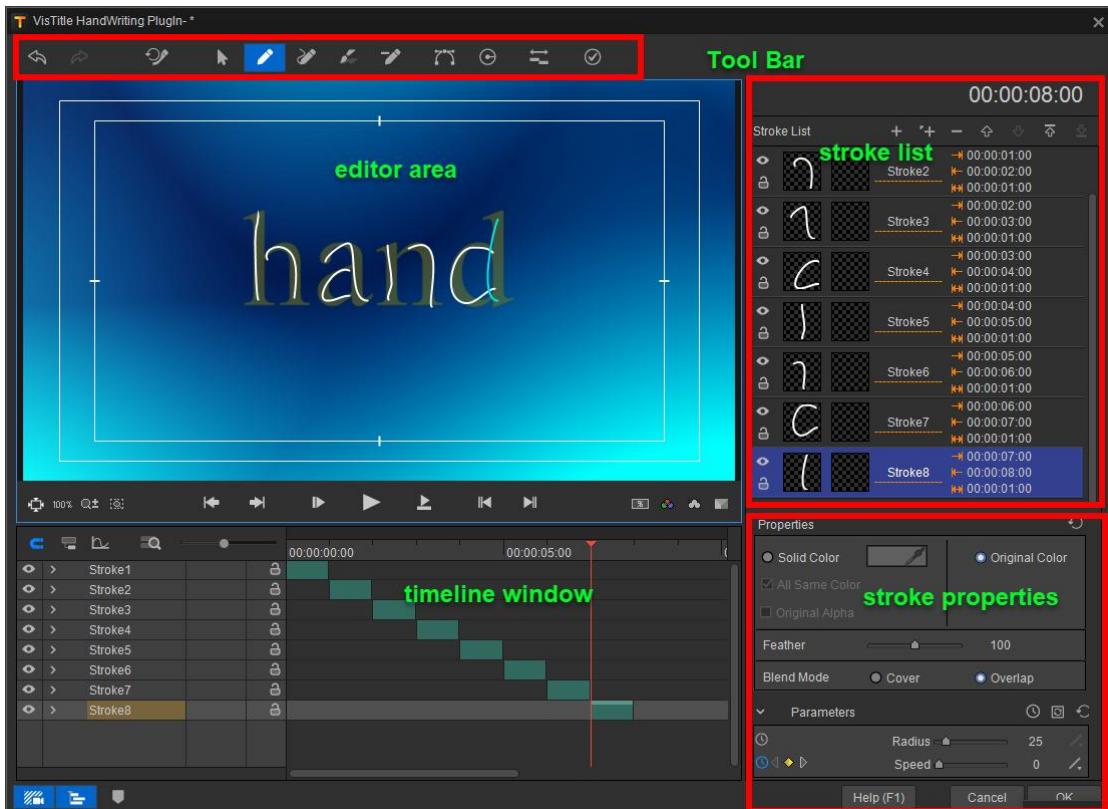

Create a text or image object, choose one object as handwriting material.

Click on “Object” button in tool bar, then choose “Handwriting” button from the drop-down list of “Title Plugin”.

## 11.10.2. Handwriting Interface Description

### ◆ Tool Bar

The buttons order from left to right is “Undo”, “Redo”, “Reset”, “Select”, “Fast Draw”, “Paint Sketch”, “Paint Contour”, “Delete”, “Edit Bezier”, “Edit Radius”, “Auto Head-Tail Arrange Stroke time”, “Hide Circle”.

### ◆ Editor Area

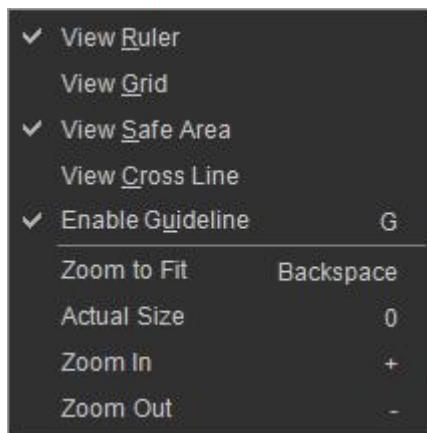

Editor area is used for painting sketch, painting contour and showing handwriting effect.

The buttons order of marked buttons from left to right is “Fit Window”, “Actual Size”, “View Zoom”, “To select the previous stroke”, “To select the next stroke”, “Play Start”, “Play”, “Current”, “To Home”, “To end”, “show Alpha Image”, “Show Full Color”, “Show Alpha Only”, “Show Fill Color”.

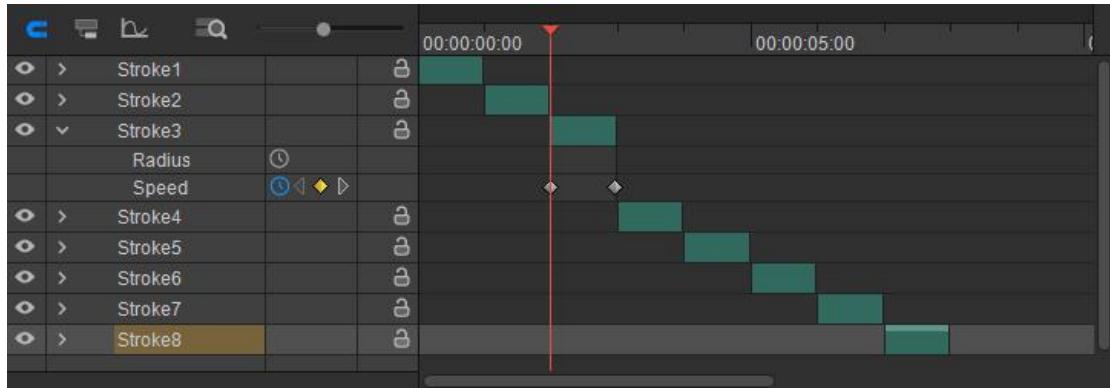

#### **Common right button functions of editor area**

Right-click on editor area. Following is the context menu.

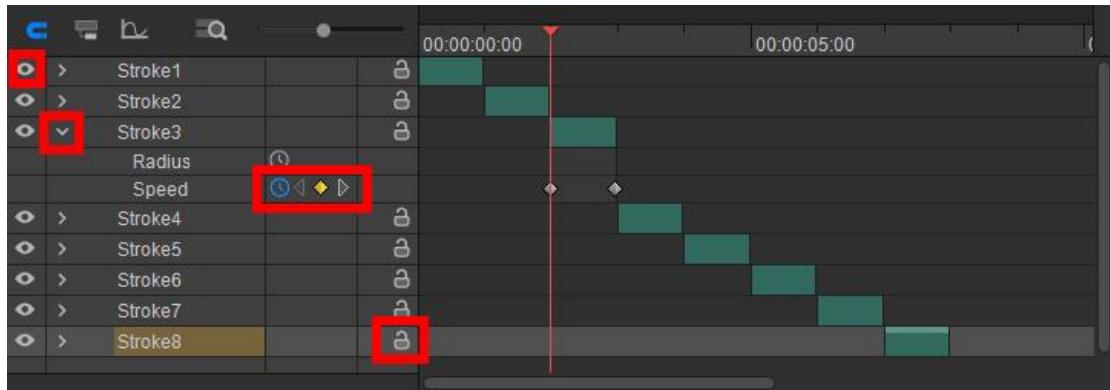

#### ◆ Timeline

Timeline screen is used to display strokes and set stroke radius or speed. Timeline window includes two parts. The right part can show timeline position and stroke playing time length. The left part displays object tree structure. It is applied to add or remove keyframe.

The common buttons in timeline screen

The buttons order of marked buttons from left to right is “Track Visible/Invisible”, “Expand/Collapse Track”, “Toggle Animation”, “Go to Prev/Head Keyframe”, “Add/Remove keyframe”, “Go to Next/Tail Keyframe”, “Lock/Unlock Track”.

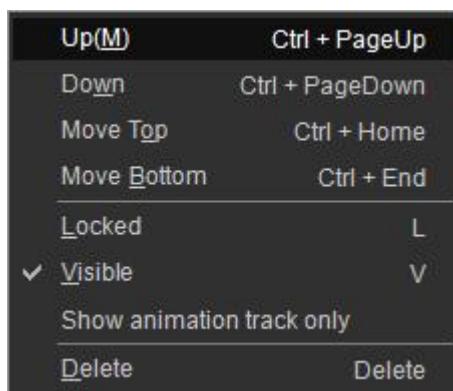

The buttons order from left to right is “Timeline Auto Snap”, “Expand all Track”, “Graph View”.

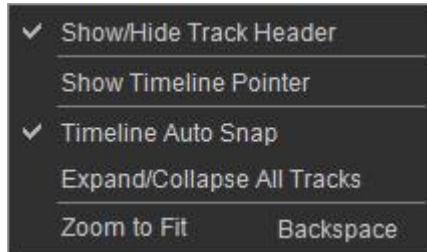

The right marked button is used in scaling time.

#### General right button functions of timeline window

Click on a stroke in timeline window, then right-click on it. The following is the corresponding context menu.

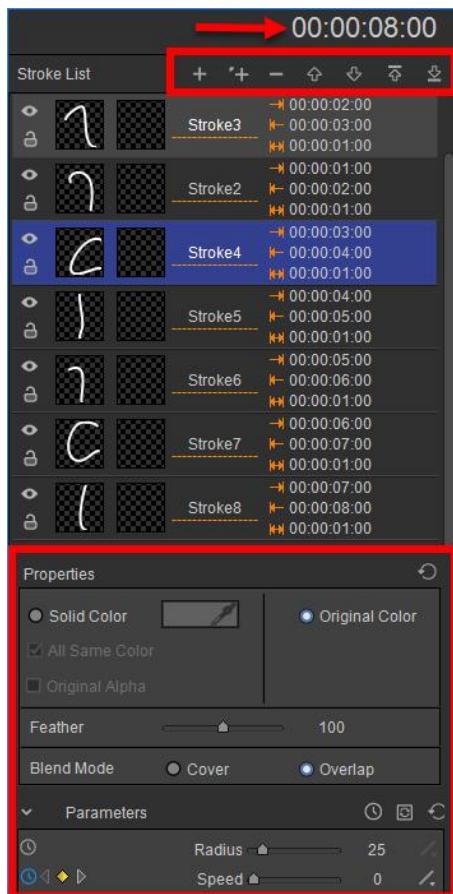

Right-click on the blank of timeline window.

### ◆ Stroke Properties

Stroke properties screen contains stroke list window and attribute setting panel.

The marked time by arrow is total playing time of all strokes. Clicking on it and inputting number can scale all strokes play time proportionally.

#### Stroke list

Stroke list layout shows all strokes in editor screen. It can be used for deleting and inserting stroke. The buttons order of marked buttons from left to right in the right part of the image is "Add", "Insert", "Delete", "Up", "Down", "Head", "Bottom".

#### Properties

In the part below of the image, the marked screen is properties setting panel to edit stroke color, radius and speed.

### 11.10.3. Paint Sketch

Click on “Fast Draw” button in tool bar,

Press and drag mouse to draw a stroke. If you operate “Handwriting” for the first time, you need not choose “Fast Draw” button.

**Note** When painting sketch you should draw according to actual writing type. For example, the type is from left to right.

“Paint Sketch” button can be applied to delete original sketch.

The methods to delete stroke:

Method1: Click on the selected stroke, then click on “Delete” button in tool bar.

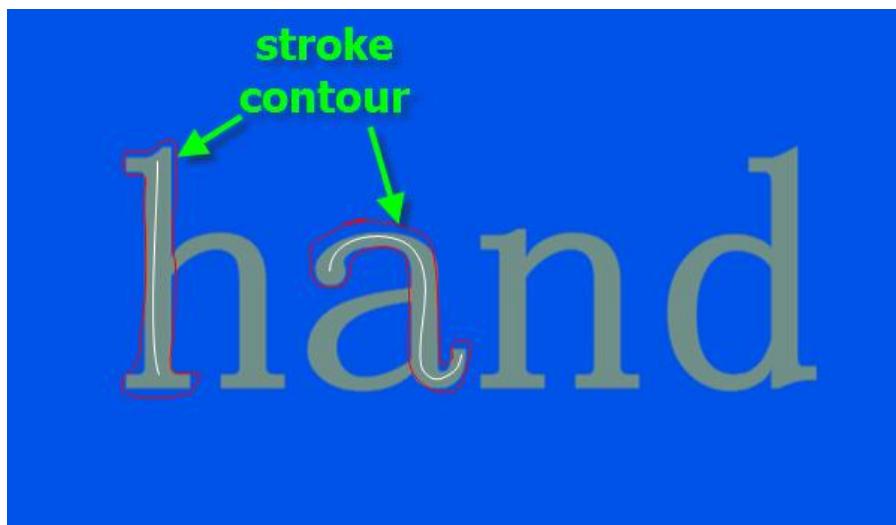

Method2: Click on the selected stroke, then click on “DELETE” of keyboard shortcuts.

#### 11.10.4. Paint Contour

Click on “Paint Contour” button, then drag cursor to draw a closed curve around stroke edge of stroke sketch.

Note     Stroke contour should be larger a little than stroke edge

#### 11.10.5. Edit Bezier

When tiny sketch or contour fault need be rectified, you can use Bezier editor.

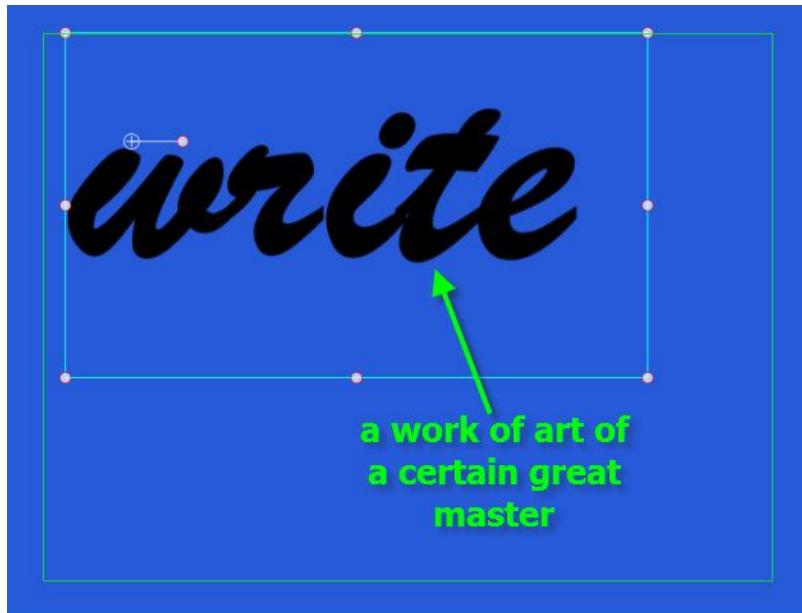

Click on stroke sketch or contour in editor screen, then double-click on cursor or click on “Edit Bezier” button in tool bar.

You can refer to guidance of VisTitle to learn editing Bezier approach.

#### 11.10.6. Stroke Radius

Some special font, for example, running-hand of great handwriting master, their radius often need be adjusted to be perfect.

Open “Handwriting” to paint sketch or contour, then choose stroke to change its radius.

**Method1:**

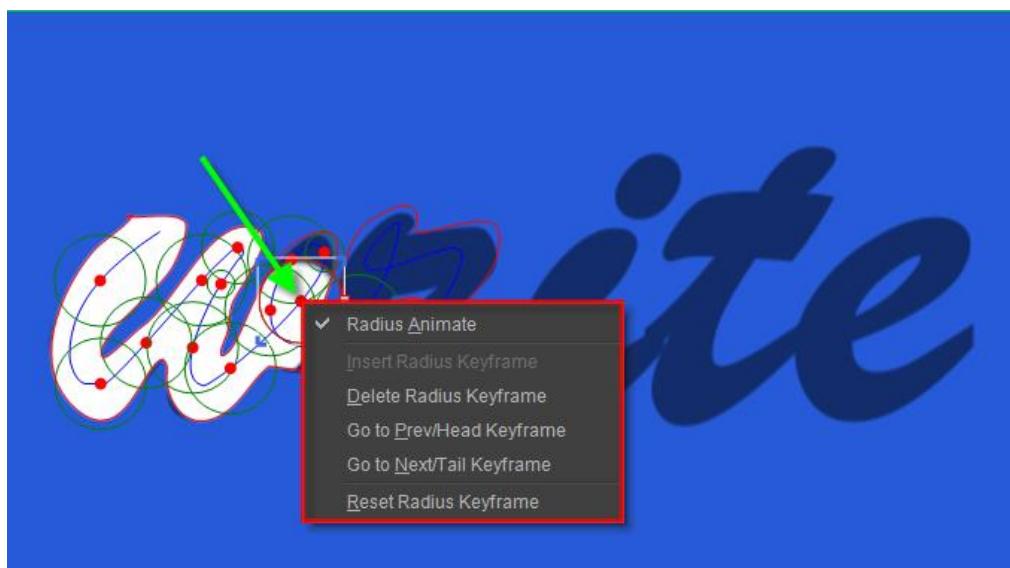

Click on current stroke in editor screen, then choose “Edit Radius” button. There will be a circle on Stroke sketch. Click on the control point and drag it to change stroke radius.

Note Click on “Hide Circle” button you can set circle visibly or invisibly.

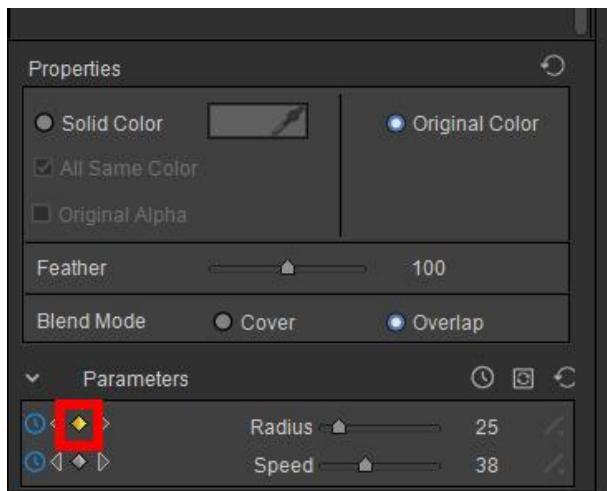

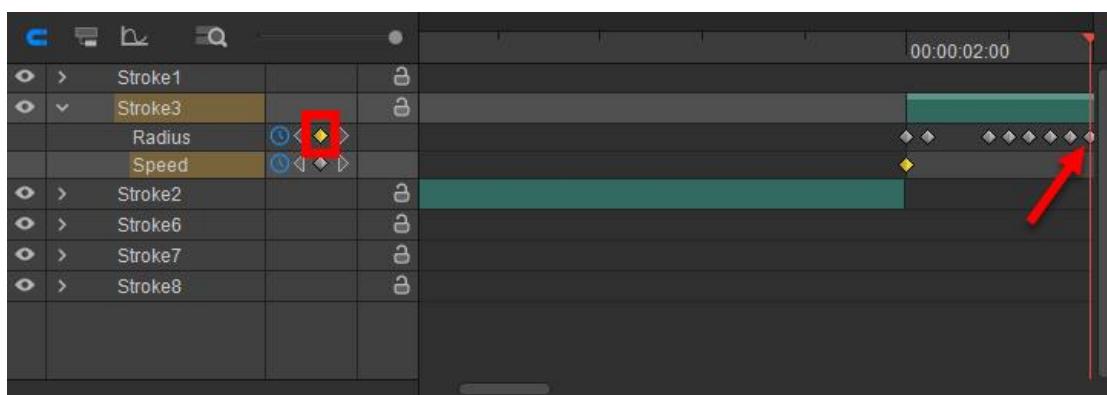

Right-click on circle center.

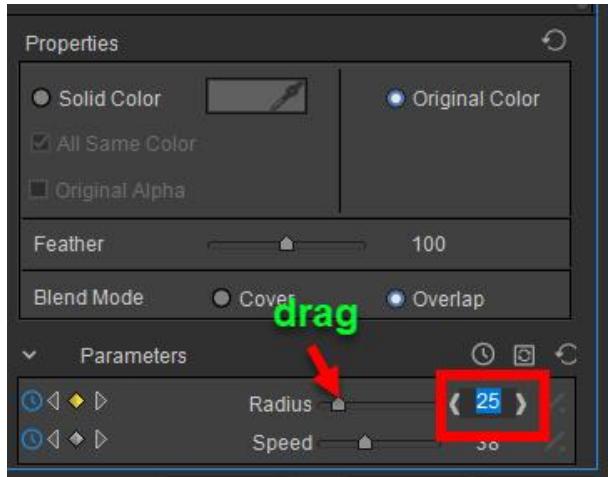

### Method 2:

Click on current stroke in editor screen. Move timeline to preview. Add a keyframe to adjust stroke radius wherever radius need be changed.

Click on “Add/Remove Keyframe” button to add a keyframe in properties or timeline window.

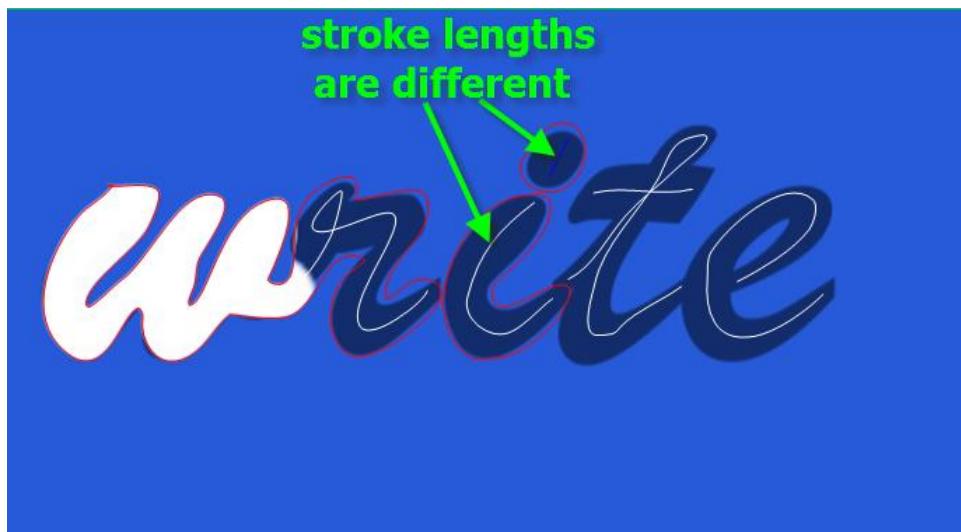

Drag radius slider or input suitable value then click on ENTER.

### 11.10.7. Stroke Playing Speed

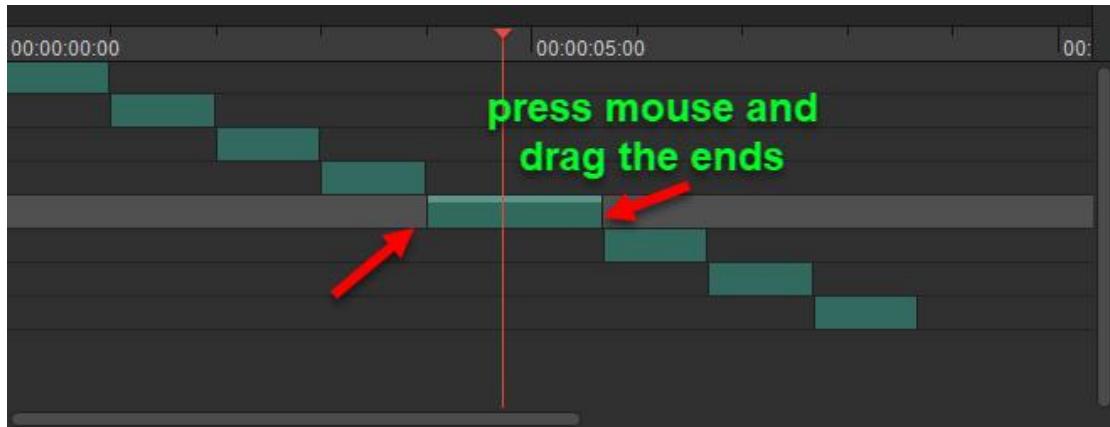

All strokes playing time are equal in the system default condition. Changing stroke playing time length, stroke playing speed will change. But every stroke is played at constant speed.

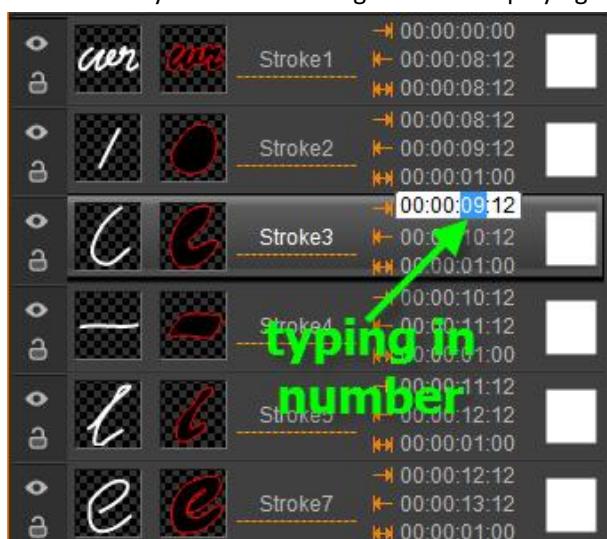

Every stroke can be adjusted to show special effect.

#### Method1: (playing current stroke at constant speed)

Click on selected stroke in timeline window, then drag both ends of the stroke. Along with the change of stroke playing time length, stroke playing speed will change.

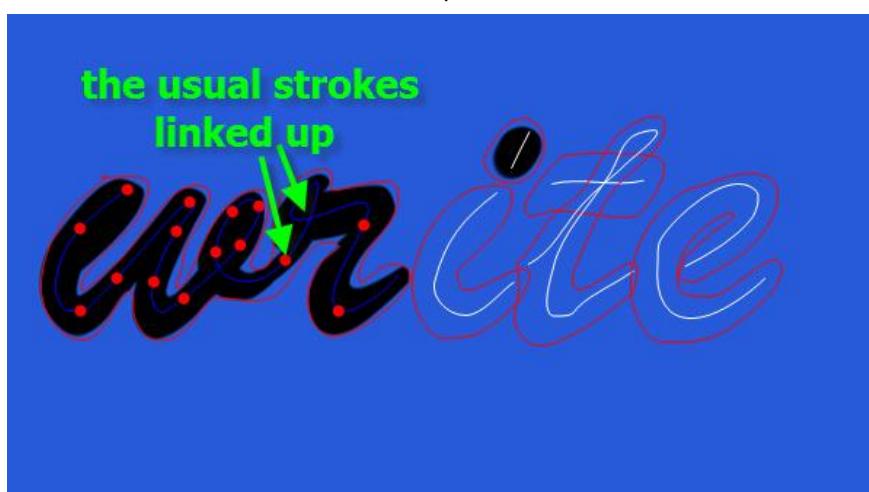

Click on selected stroke in stroke list window. Double-click on in-time and out-time, then type in values. Thus you can also change the stroke playing time length.

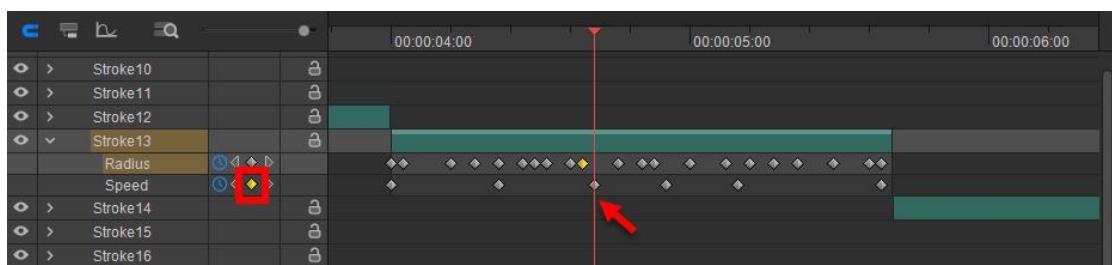

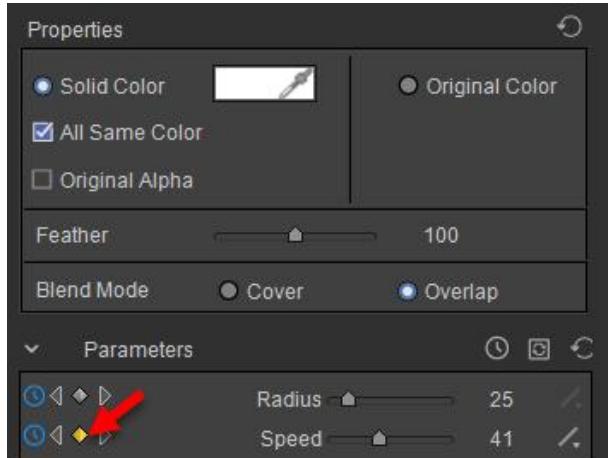

#### Method2: (playing current stroke at different speed)

Add a keyframe and change keyframe values to adjust stroke playing speed. This action is often used when several strokes are linked up.

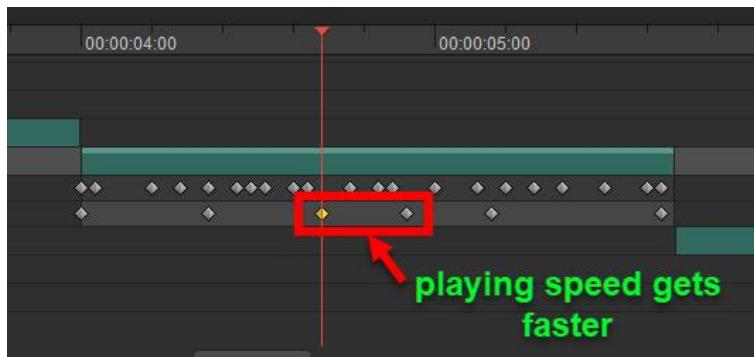

The marked part is drawn fast, so the playing speed need be adjusted.

Click on “Add/Remove Keyframe” in timeline window or properties window to add a keyframe.

Click on the second keyframe and move it to suitable position after add a keyframe. The shorter playing time between the first keyframe and the second keyframe gets, the faster current stroke playing speed will get.

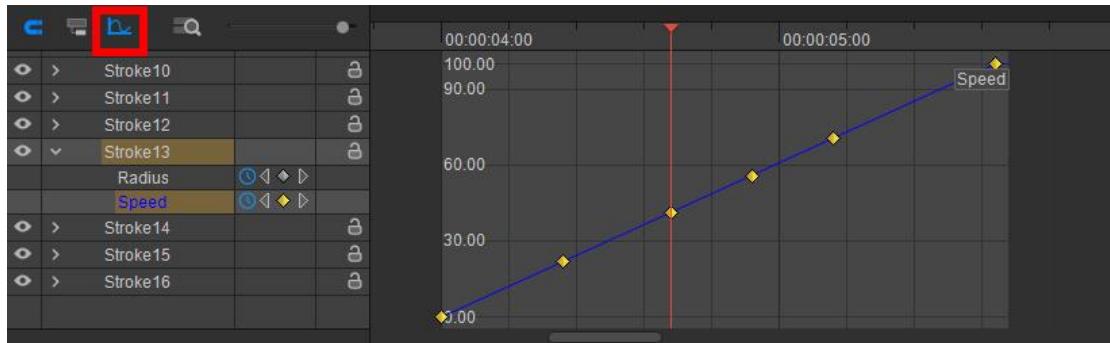

Just like when increase time length between two keyframes, playing speed will get slower.

## 11.10.8. Edit Graph View

### ◆ Radius

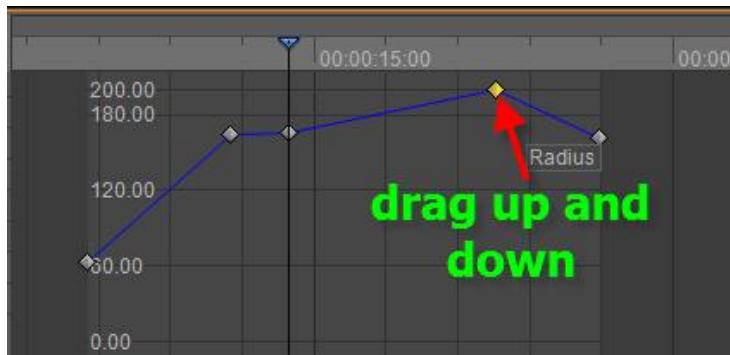

Choose “Graph View” button in timeline window. Click on radius track.

Move timeline in graph view window, then click on mouse to add a keyframe. The marked time is playing time length of current stroke.

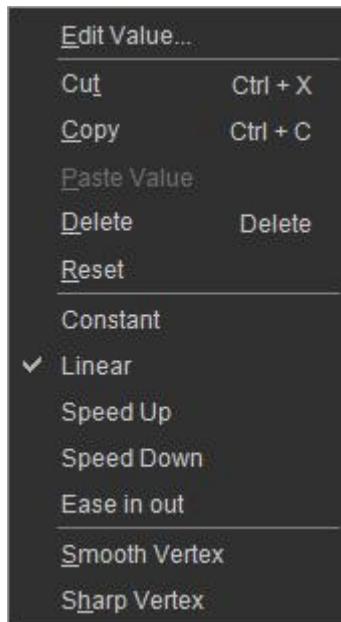

Press mouse and drag it up and down to adjust selected keyframe values,

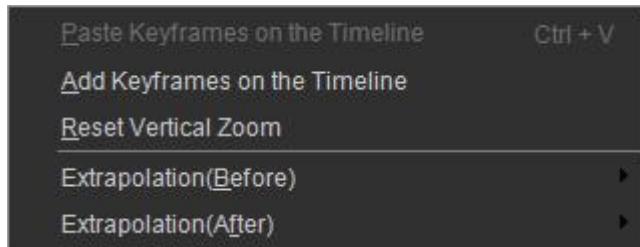

Press ALT and mouse, drag selected keyframe left and right,

Right-click selected keyframe,

Right-click in the area where there are not keyframes,

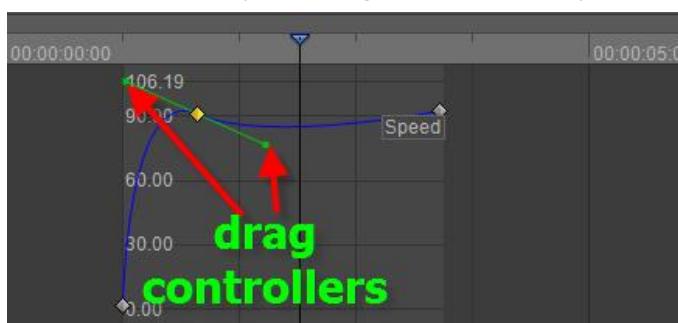

#### ◆ Speed

Choose “Graph View” button in timeline window. Click on speed track to switch to speed graph view.

Move timeline in graph view window, then click on mouse to add a keyframe.

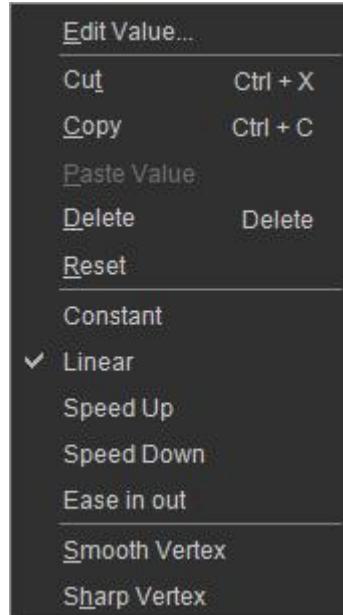

Press mouse and drag it up and down to adjust selected keyframe values. Press mouse and drag controllers to show speed change between two keyframes.

Press ALT and mouse, drag selected keyframe left and right,

Right-click selected keyframe,

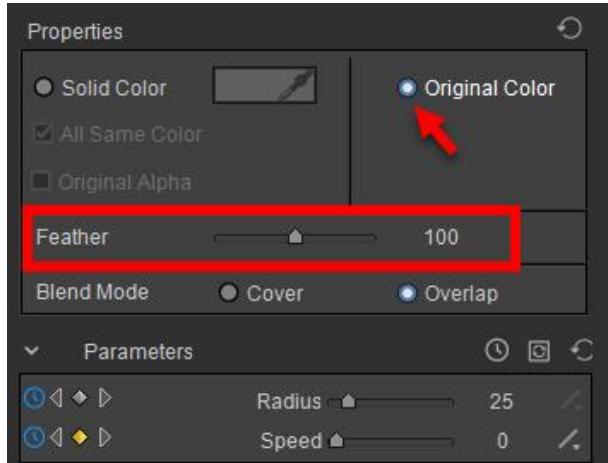

Right-click in the area where there are not keyframes,

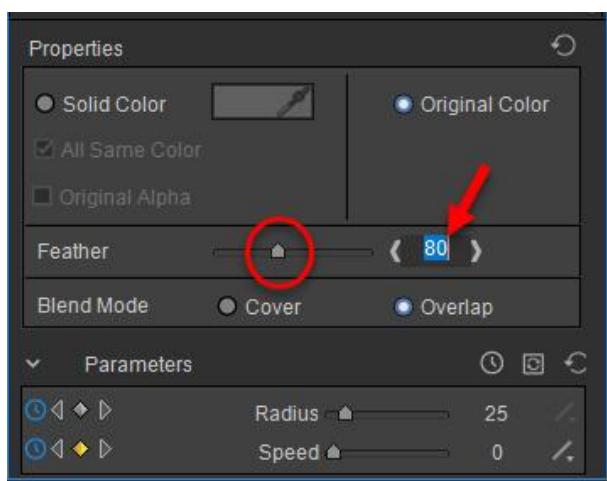

## 11.10.9. Stroke Color

### ◆ Original Color

Strokes color is original color in the system default condition. Here only feather value can be changed.

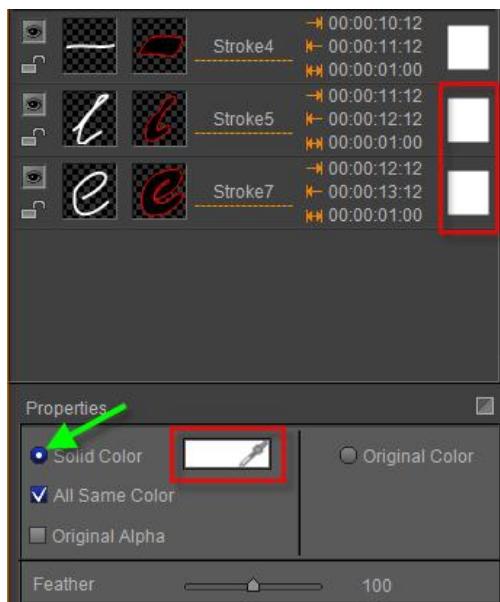

Drag feather slider, input number and click on ENTER to change feather value.

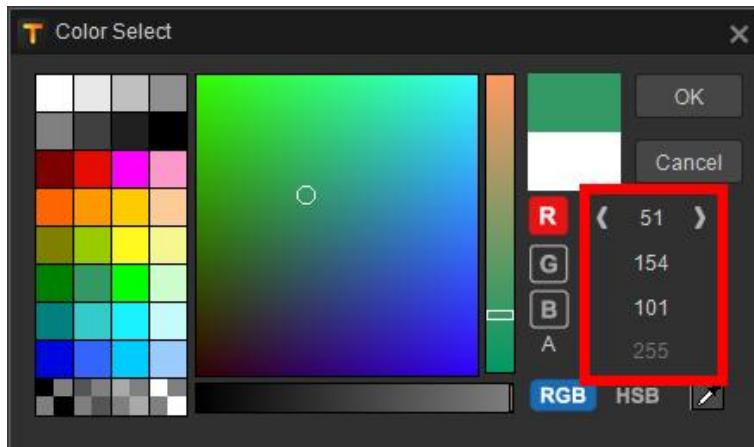

#### ◆ Solid Color

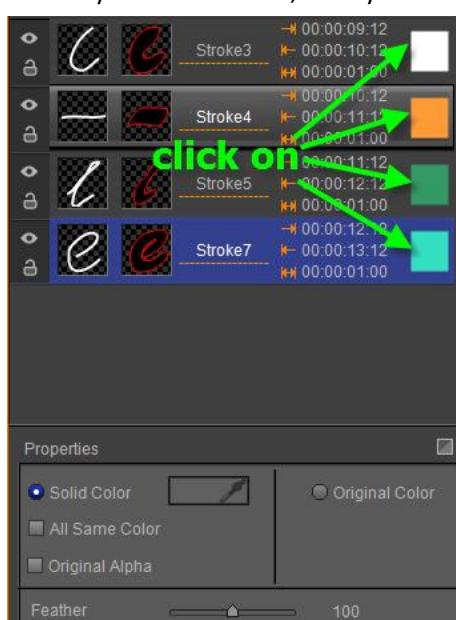

Click on "Solid Color" button. All strokes color is equal in the system default condition.

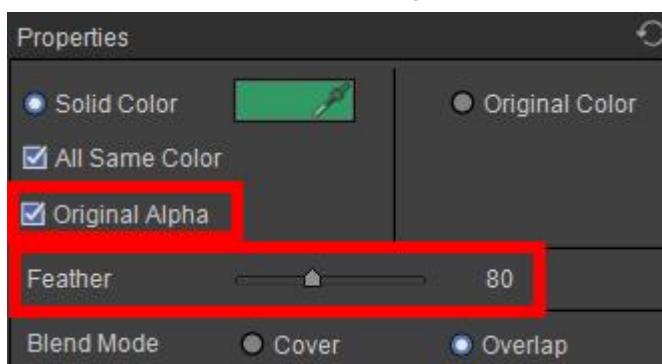

Click on color panel behind "Solid Color" button. Choose a color in the left part or move circle to select a color. The values of RGB can be changed to pick out a color.

If you want to set different stroke color, firstly click on “All Same Color” to make it unable, secondly choose a stroke, thirdly select a color in color panel.

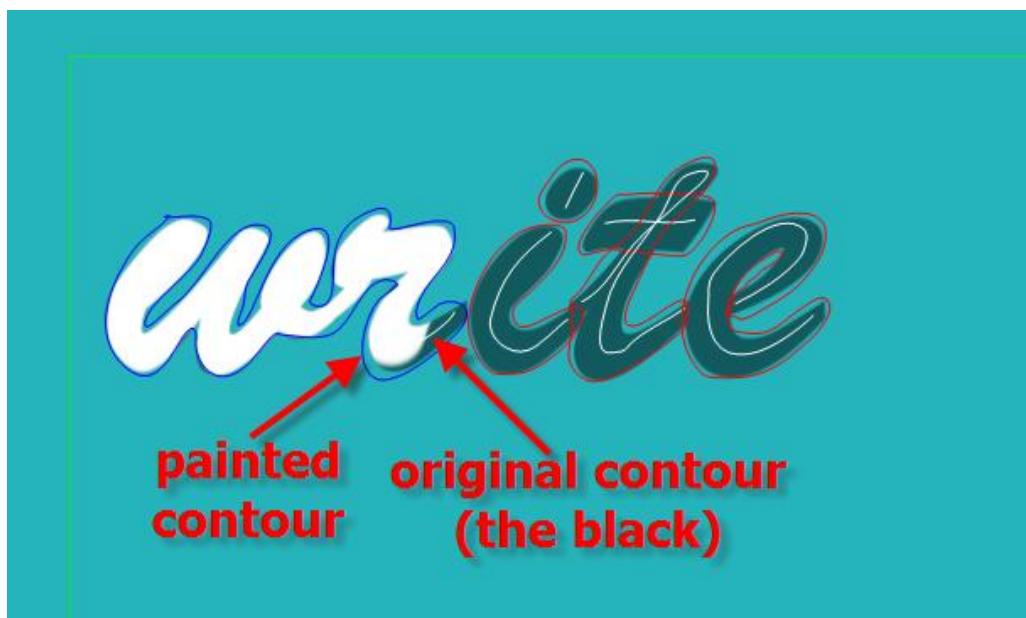

Click on “Original Alpha” button to apply it. Double-click to close it. Drag feather slider or input number and click on ENTER to change feather value.

### Original Alpha

When activating “Original Alpha”, strokes are drawn according to the original strokes. When close “Original Alpha”, strokes are drawn according to the contour size.

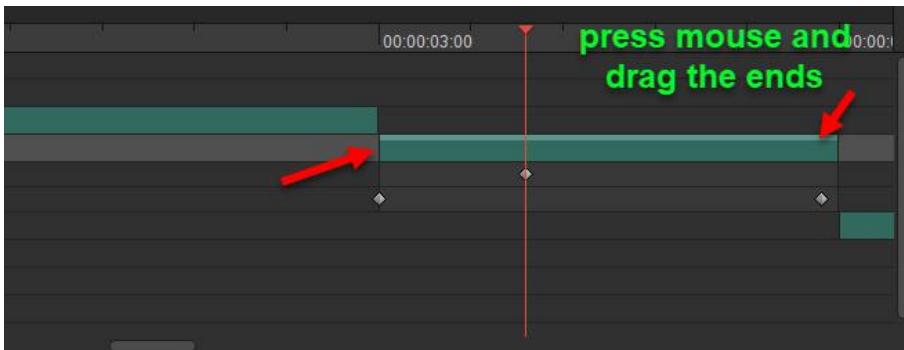

Following is different effects of applying original alpha and close original alpha.

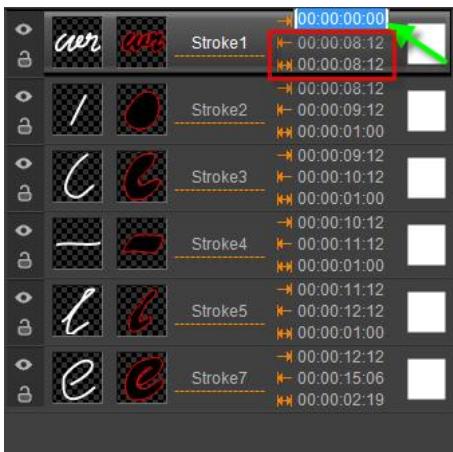

## 11.10.10. Playing Time

### Stroke playing time length

Choose a stroke in editor window or stroke list window, then drag both ends of the stroke to change its playing time length.

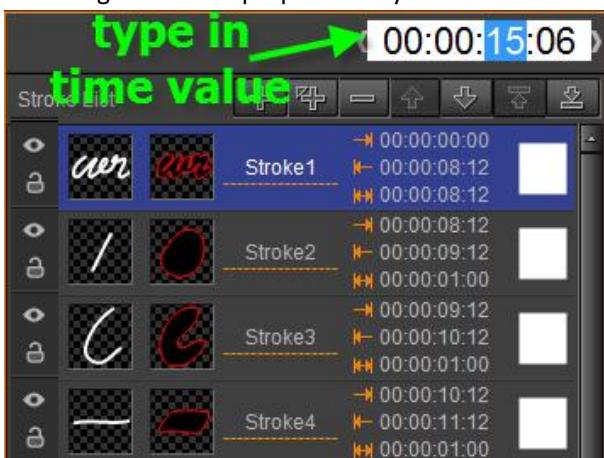

To change stroke playing time length after selecting a stroke in stroke list window,

Double-click on the marked, type in suitable values.

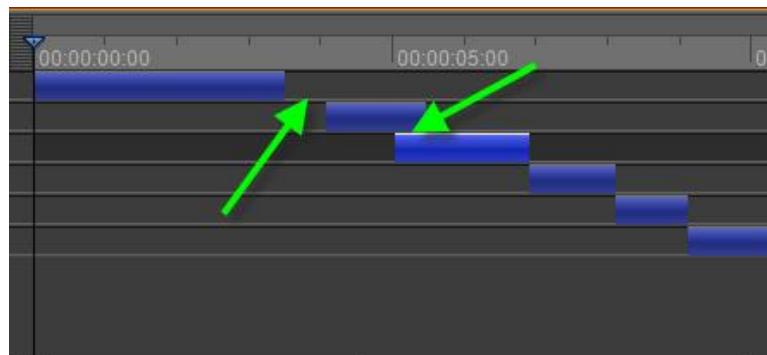

### Total playing time length

Click on the time number above stroke list window, type in value then click on ENTER. The time number is total playing time length of all strokes. Once it has been changed, every stroke playing time length is scaled proportionally.

There are some special conditions after changing stroke playing time length, such as strokes

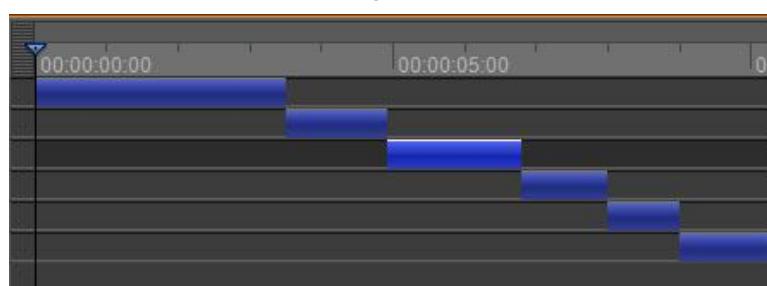

overlap, gap.

Click on “Auto Head-Tail Arrange Stroke Time” button,

Strokes will auto head-tail arrange.

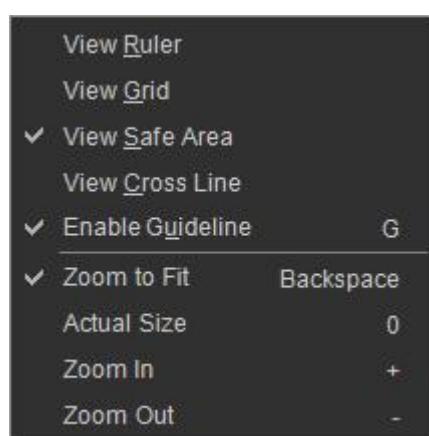

### 11.10.11. Setting General Functions Preview area

#### ◆ Edit Ruler or Grid

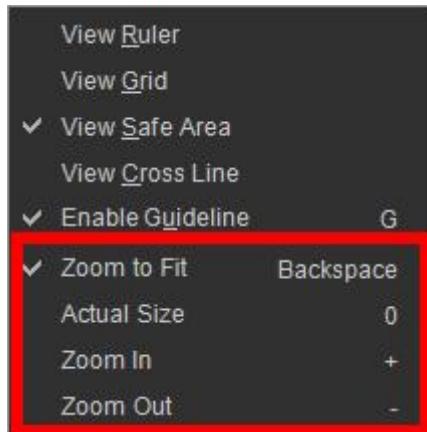

Followings are some basic functions preview area .

Right-click on mouse, choose the applied option.

#### ◆ Set View Zoom

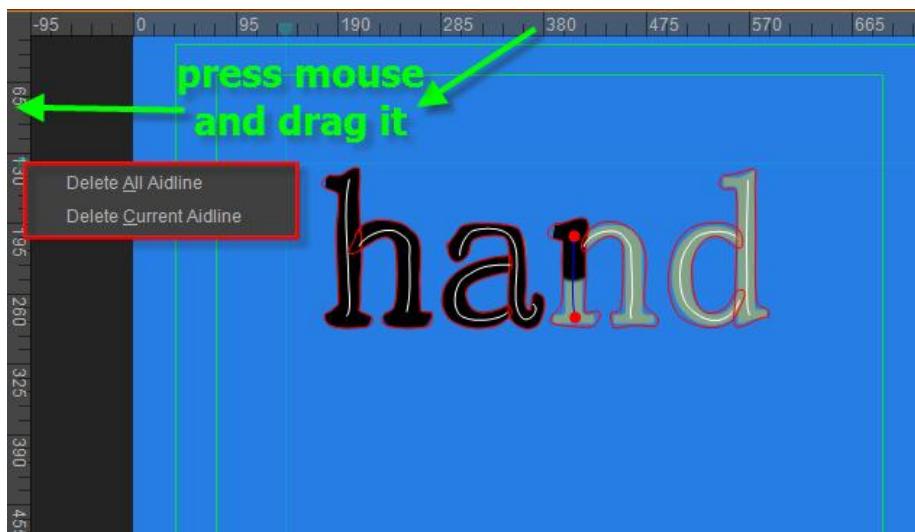

Method 1: Right-click in the preview area, choose “View Zoom”,

Method 2: Right-click and drag mouse in the editor screen.

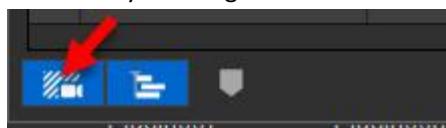

#### ◆ Set Aidline

To create aidline you can press left key of mouse and drag it in ruler area. If you want to delete the aidline, you can right-click in the aidline head.

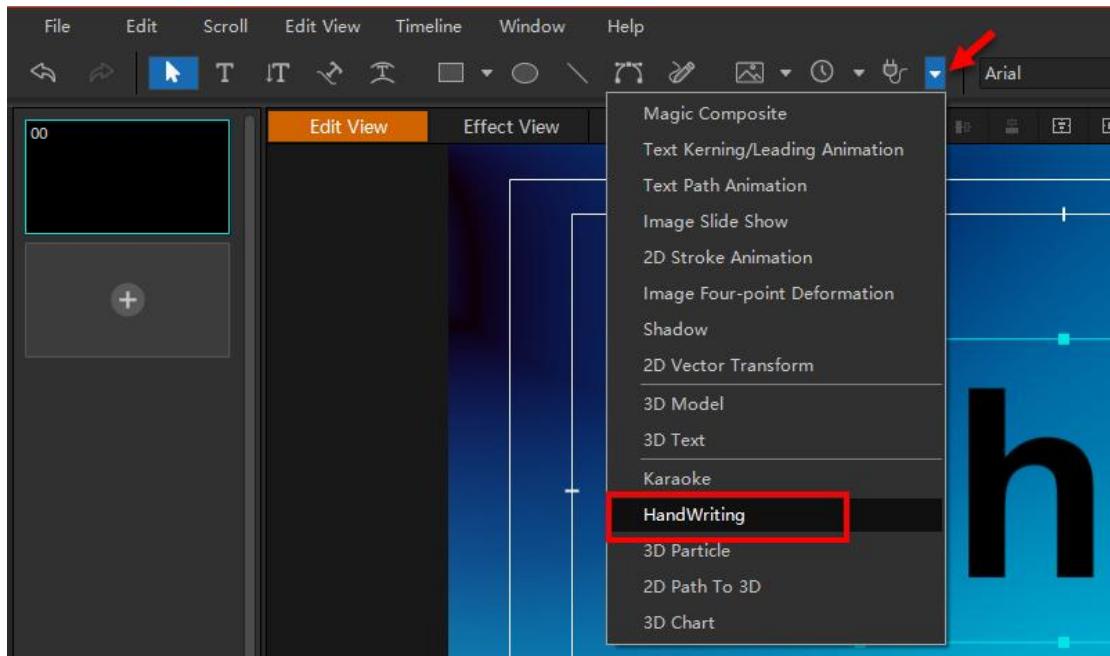

### 11.10.12. Set Sync Background

Click on “Sync Background” button in the status bar to set.

### 11.10.13. Operation Flow of Handwriting

Create a text or image object in Edit Screen, then choose “Handwriting” button from the drop-down list of “Title Plugin”.

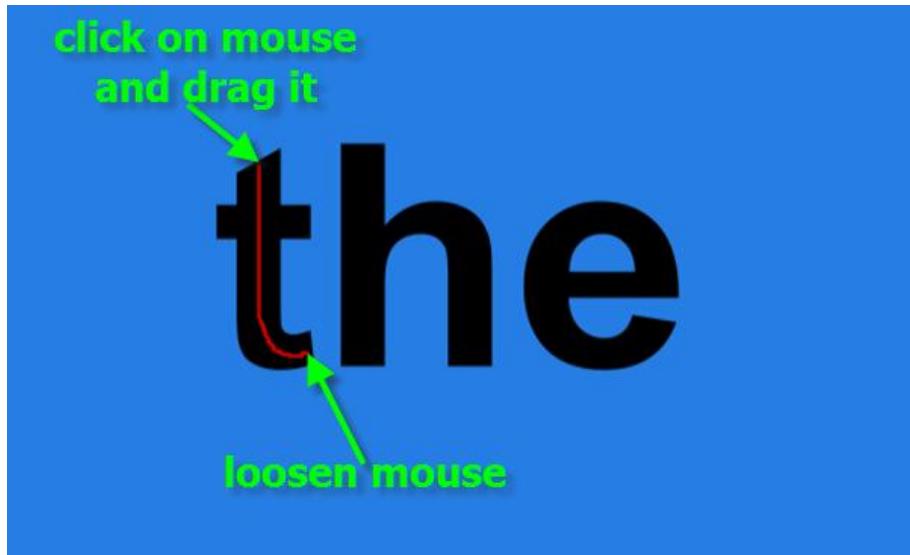

### Step-1 Paint Stroke Sketch

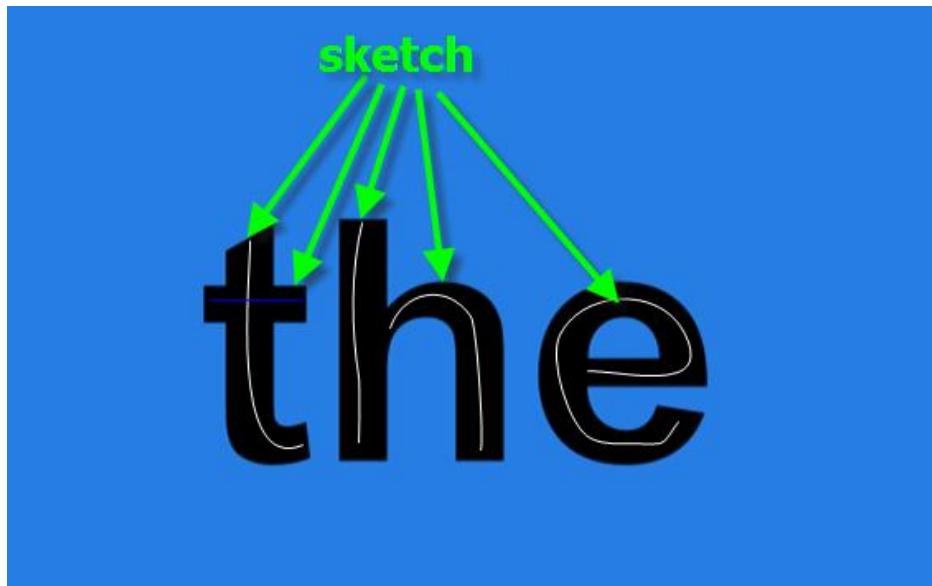

Click on the “Fast Draw” button in tool bar.

Press and drag mouse to draw a stroke. If you open the Handwriting plugin for the first time, you need not choose “Fast Draw” button.

Draw all sketches.

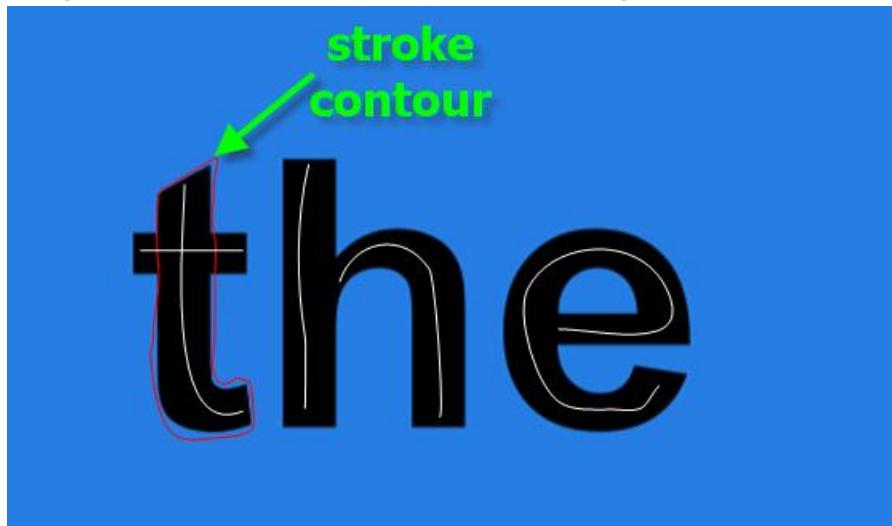

#### Step-2 Paint Contour

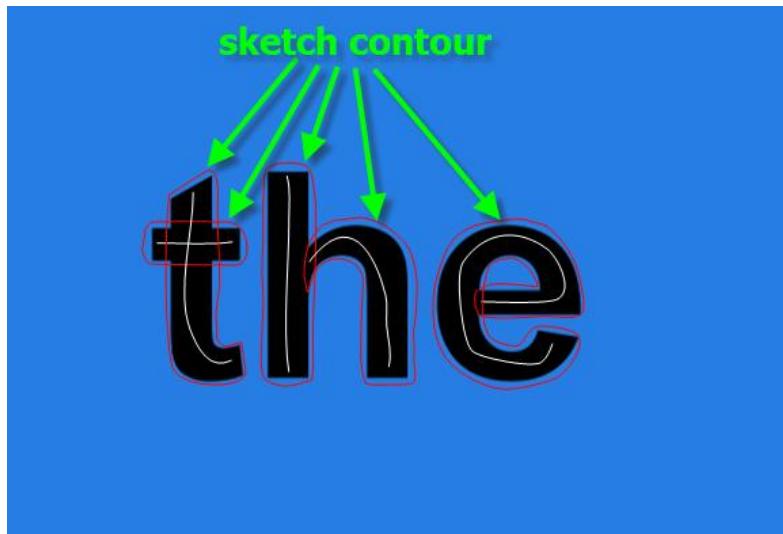

Choose a stroke sketch then click on "Paint Contour" in tool bar.

Drag mouse to draw a closed curve around stroke edge of stroke sketch.

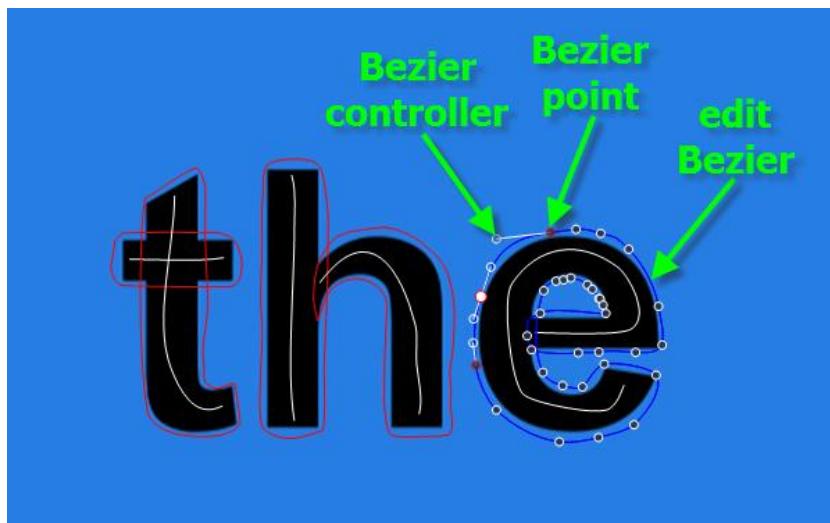

Draw all contours.

### Step-3 Edit Bezier

Double-click on stroke sketch or contour in Edit Screen.

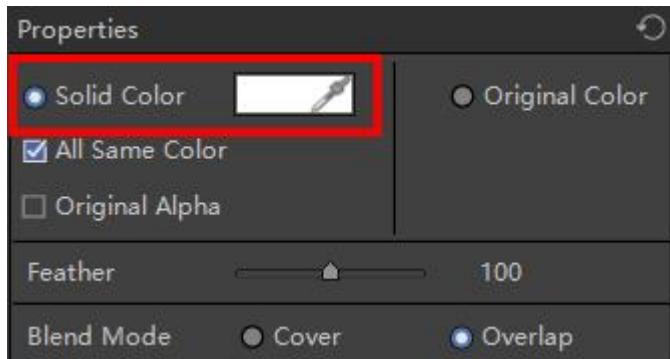

Drag Bezier point or Bezier controller to edit Bezier.

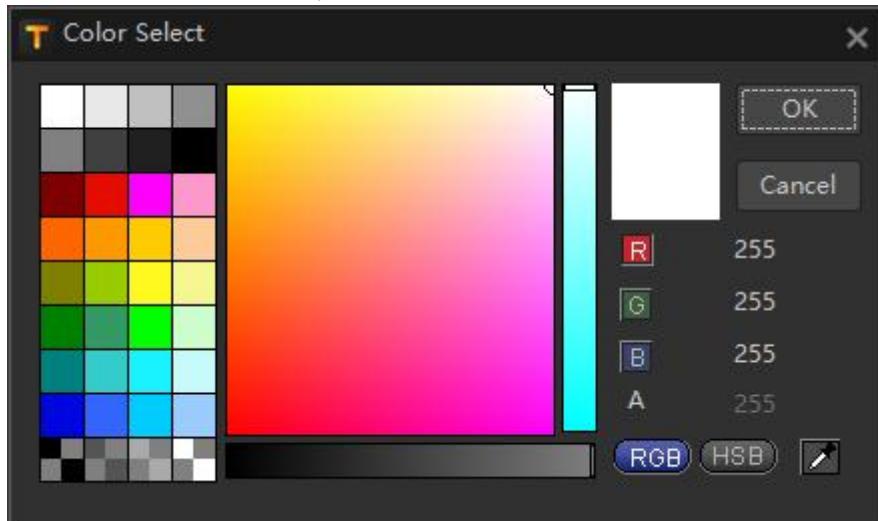

### Step-4 Stroke Color

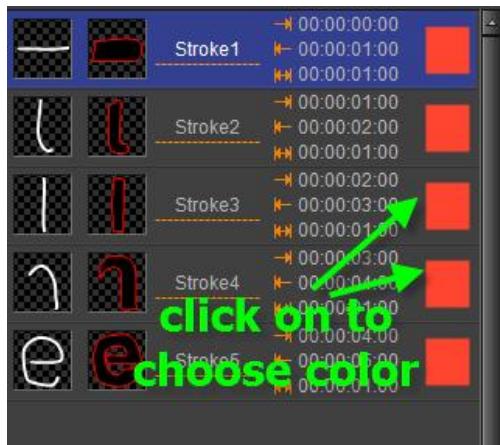

Click on "Solid Color" button to set same color for all strokes. Set feather value as 100. Click on Color button behind "Solid Color".

Choose a color in the color panel, then click on the “OK” button.

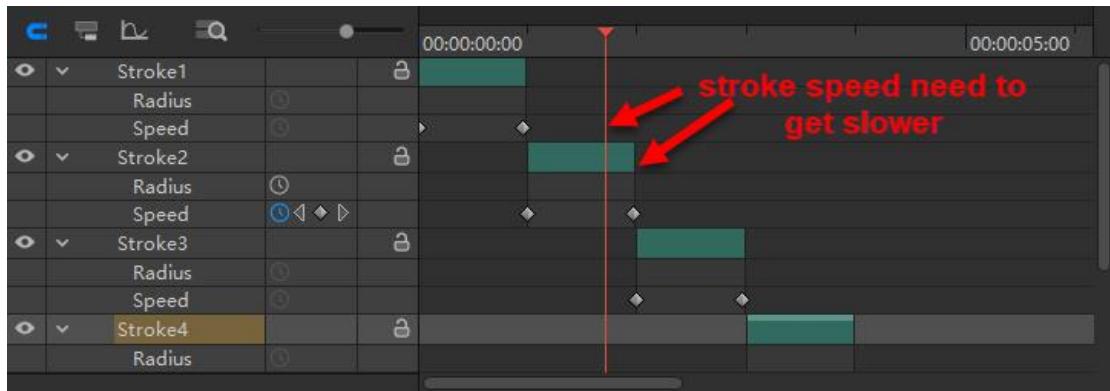

You can also click on Color button in stroke list panel to choose a color.

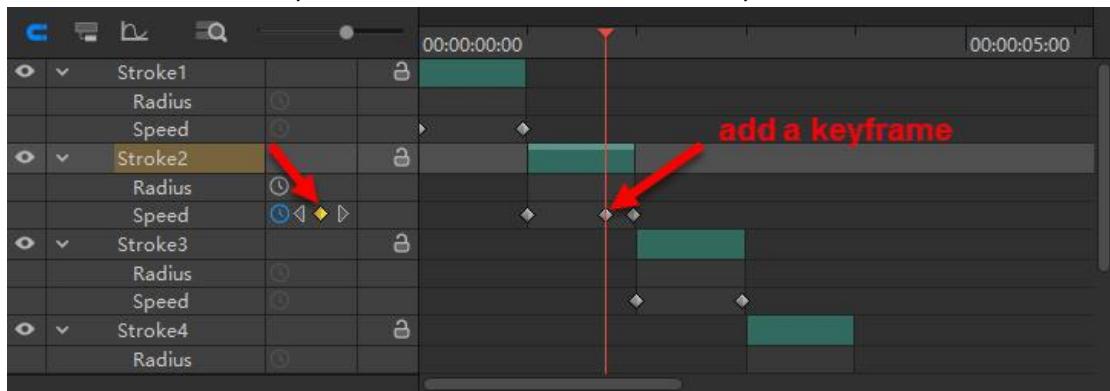

#### Step-5 Stroke Playing Speed

##### Change Playing Speed of a Section of Stroke

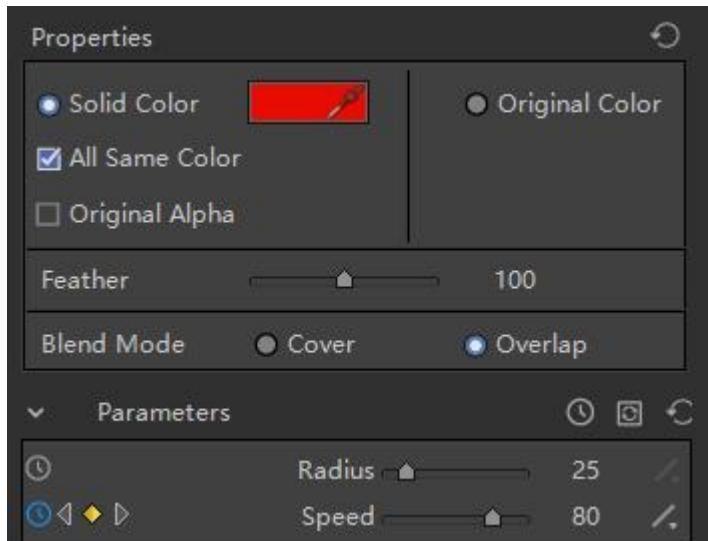

Move timeline to the position where stroke playing speed need to be changed.

Click on “Add/Remove Keyframe” in timeline window to add a keyframe.

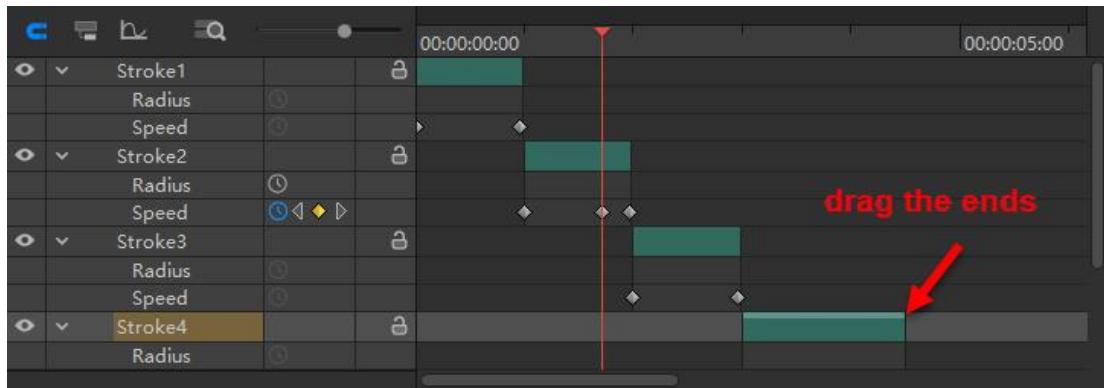

Click on “Add/Remove Keyframe” in the Property tab to add a keyframe. Set keyframe value as 80.

#### Change Playing Speed of a Stroke

Click on the selected stroke in timeline window, then drag both ends of the stroke.

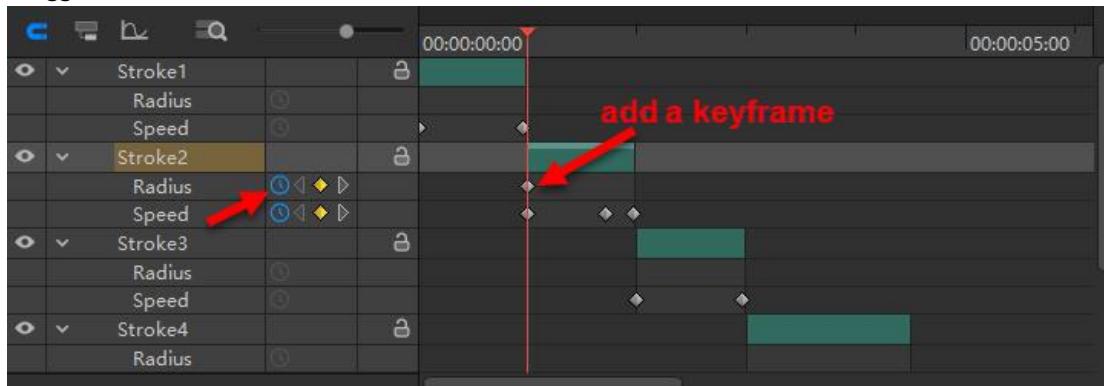

#### Step-6 Set Radius

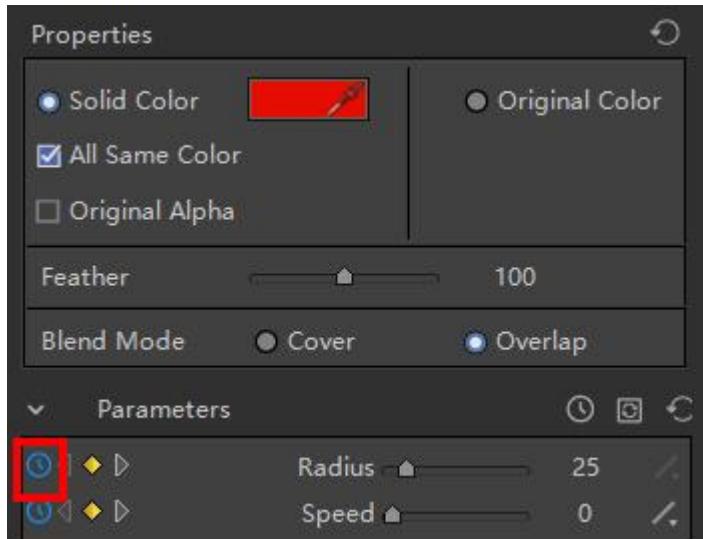

Step-1 Click on “Edit Radius” in tool bar.

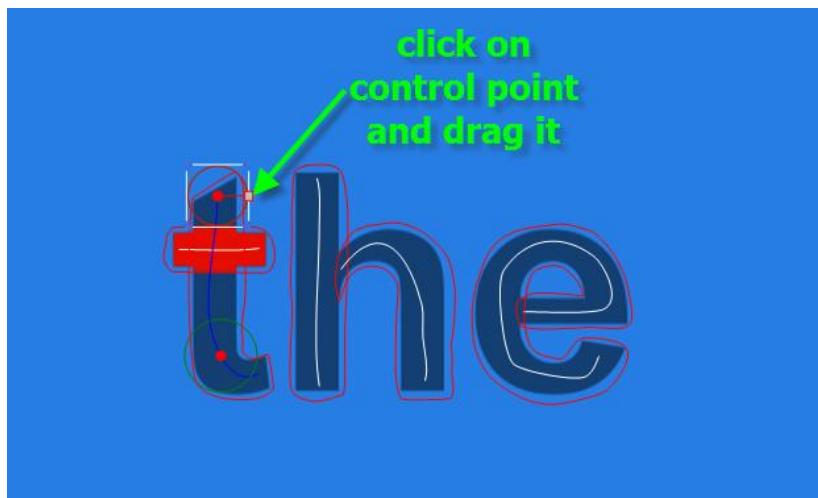

Step-2 Move timeline to the position where stroke radius need to be changed. Click on the “Toggle Animation” button in timeline window.

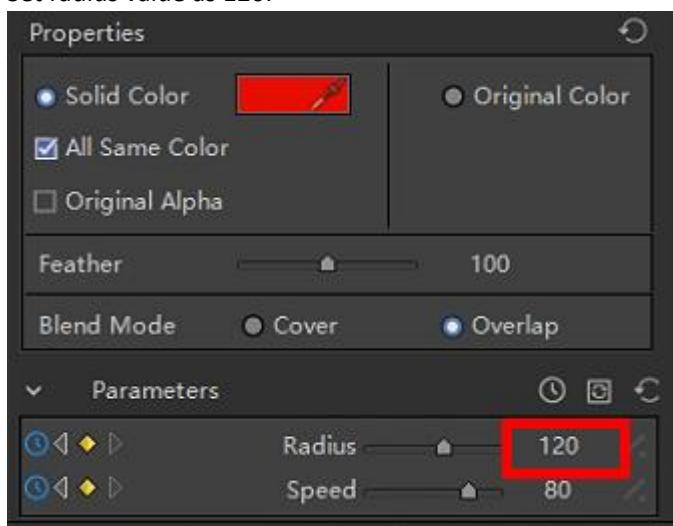

You can also click on the “Toggle Animation” button in Property tab to add a keyframe.

Step-3 Drag radius slider in the Edit Screen or input suitable Radius value in the Property tab to change stroke radius.

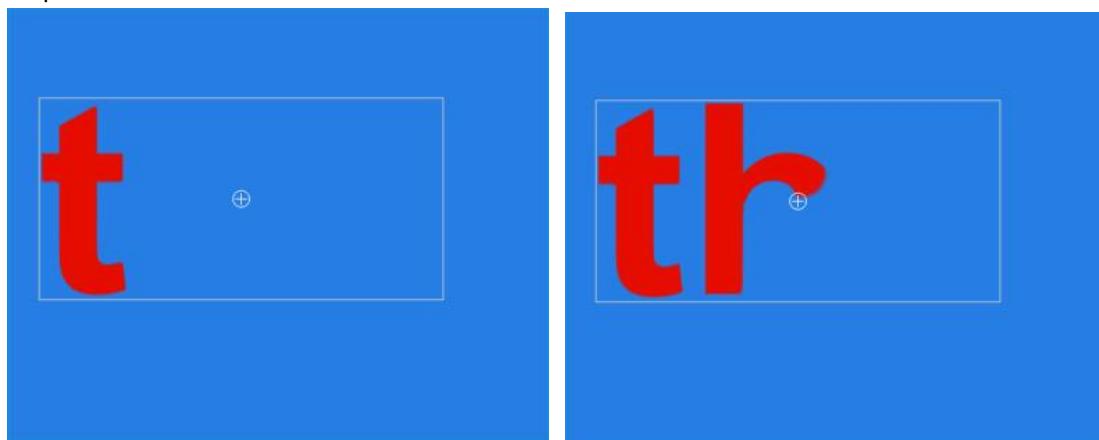

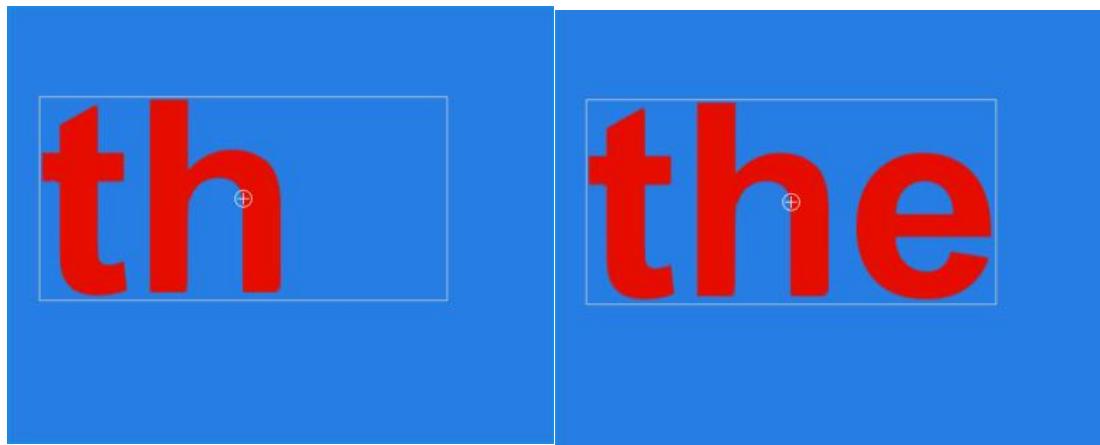

Set radius value as 120.

Just like you can add several keyframes and edit different strokes radius values.

Step-7 Preview

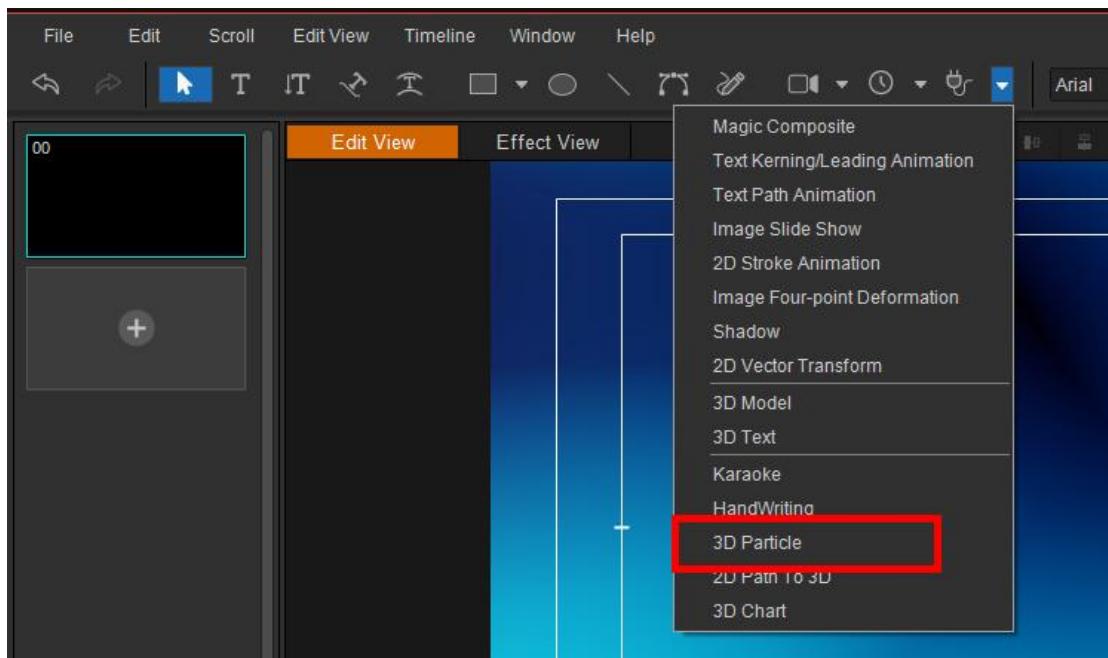

## 11.11. 3D Particle

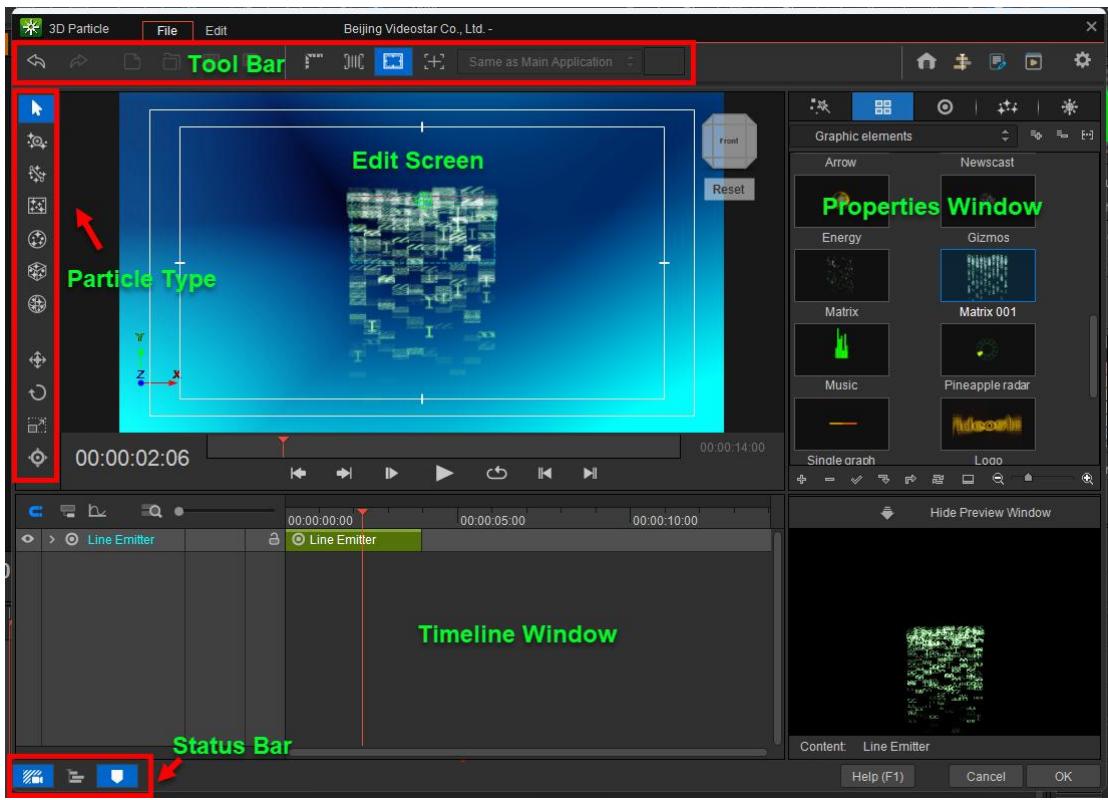

### 11.11.1. Brief Introduction of 3D Particle

3D Particle plugin is a professional 3D particle tool. Using 3D Particle plugin can make point particle, line particle and box particle and so on. Creating 3D particle and preview can be acted on simultaneously. You can set particle life and size and so on. Particle emitter with multiple particle streams can be created as needed. Plentiful particle templates can be applied directly.

Choose “3D Particle” button from the drop-down list of “Title Plugin”

## 11.11.2. Interface Description

### ◆ Tool Bar

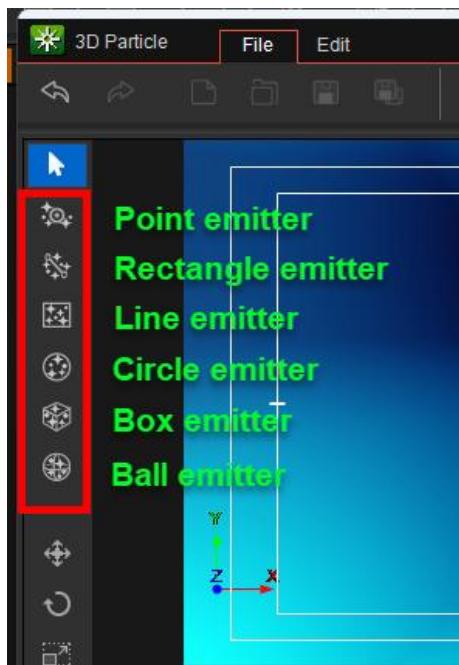

The buttons from left to right are “Undo”, “Redo”, Edit Menu (including “Copy object”, “Paste Object”, “Cut Object” and “Delete Object”), “Show/Hide View Ruler”, “Show/Hide View Grid”, “Show/Hide View Safe Area”, “Show/Hide View Crossline” and background option.

File menu includes New, Open, Save and Save as.

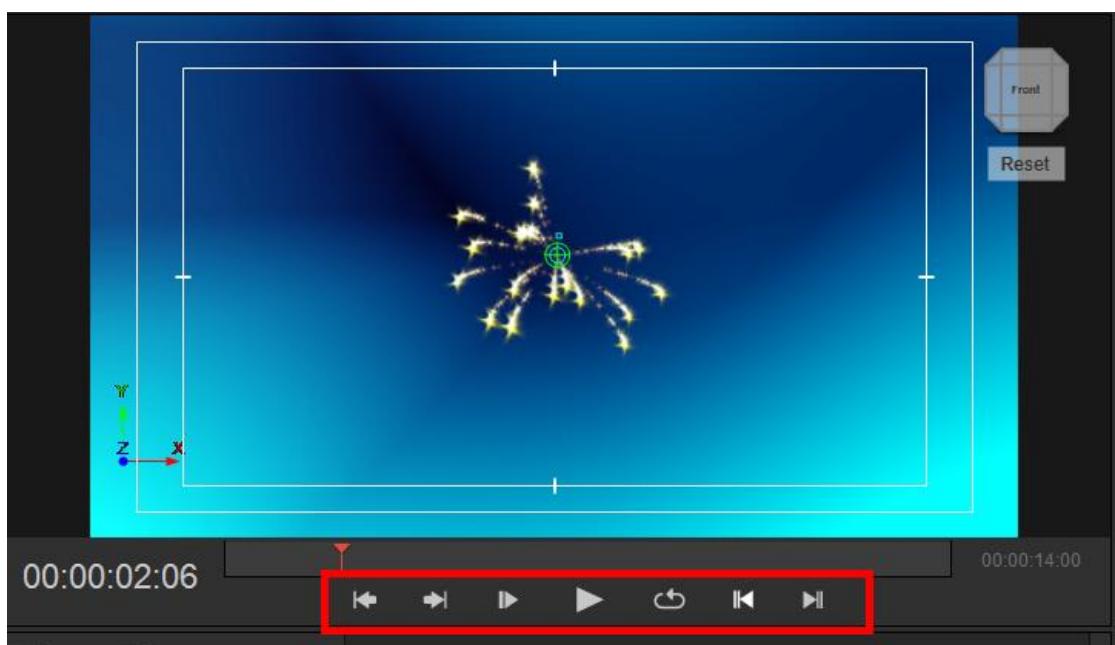

### ◆ Particle Type

Particle type includes Point Emitter, Line Emitter, Rectangle Emitter and so on. Click the buttons to choose a certain type.

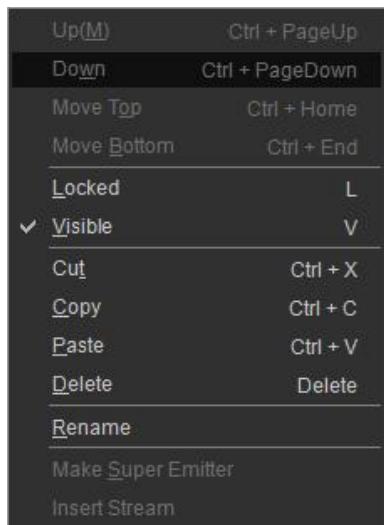

◆ Edit Screen

Edit particle in 3D edit show window. The marked buttons from left to right are "To Head of Selection", "To End of Selection", "Play from Start", "Play", "Loop", "To Home", "To End". Left time code is the current play time. You can click it and enter value to set play time. Right time code is the total play time.

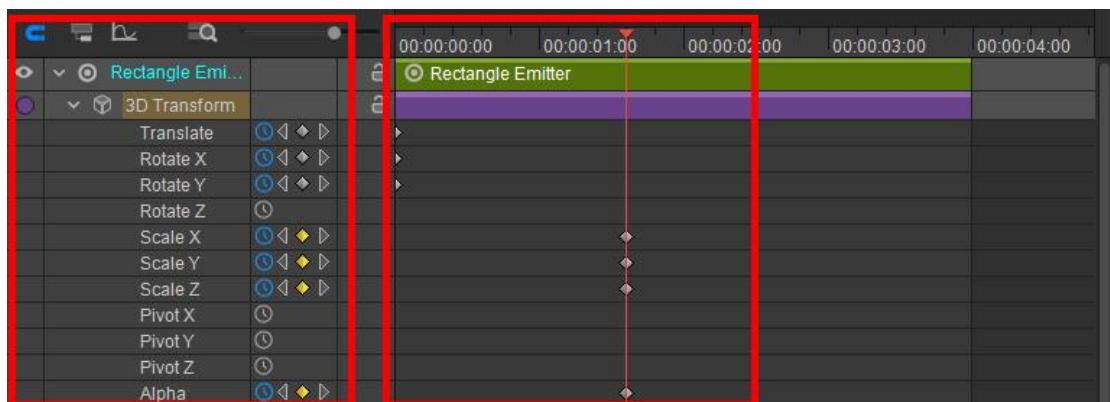

#### Context Menu

Right click on a particle emitter, the following context menu will appear.

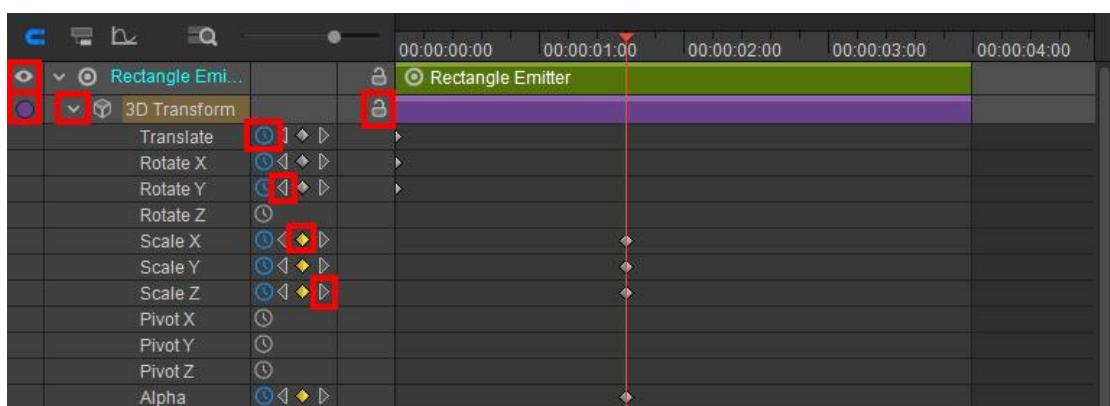

#### ◆ Timeline Window

Timeline Window is used in setting 3D Transform keyframe, playing time and so on. Timeline Window includes two parts. The right part can show timeline position and particle playing time length. The left part displays object tree structure. It is applied to add or remove keyframe.

#### Buttons in Timeline Window

The marked buttons from top to bottom are “Track Visible/Invisible”, “Expand/ Collapse Track”, “Toggle Animation”, “Go to Prev/Head Keyframe”, “Add/Remove Keyframe”, “Go to Next/Tail Keyframe”, “Enable/Disable Track” and “Lock/Unlock Track”.

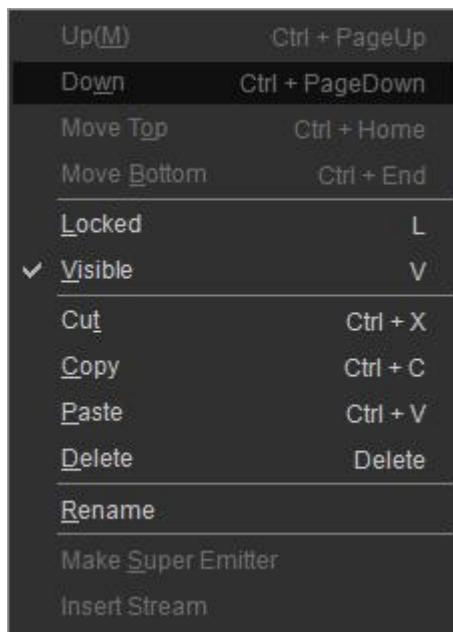

The buttons from left to right are “Timeline Auto Snap”, “Expand all Track” and “Graph View”. The

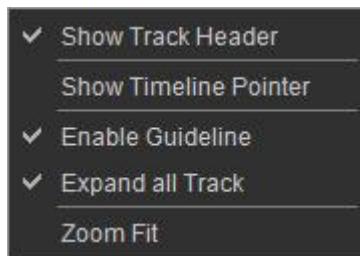

right marked button is used in zooming in/out timeline window.

### Context Menu

Right-click on an emitter track in the Timeline to see the context menu:

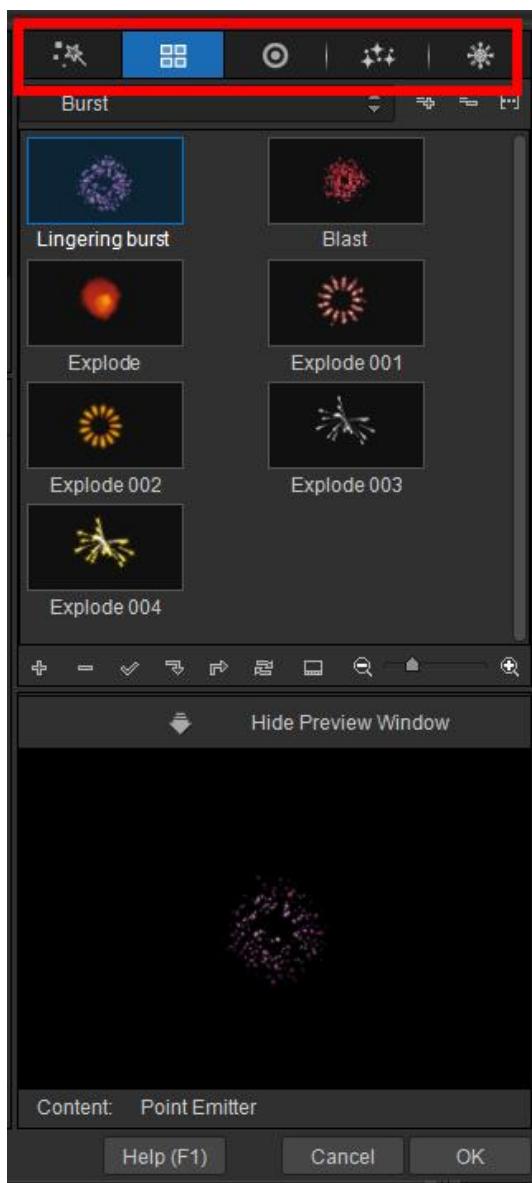

Right-click on empty space in the Timeline to see the context menu:

### ◆ Properties Window

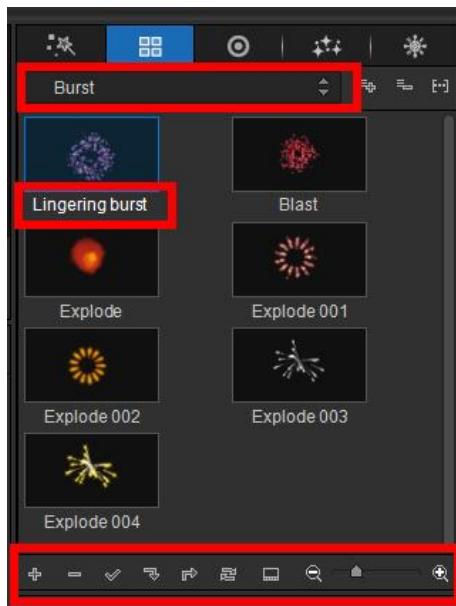

The Properties Window has five tabs: 3D Transform, Template Library, Emitter Property, Particle Property and Particle Parameter.

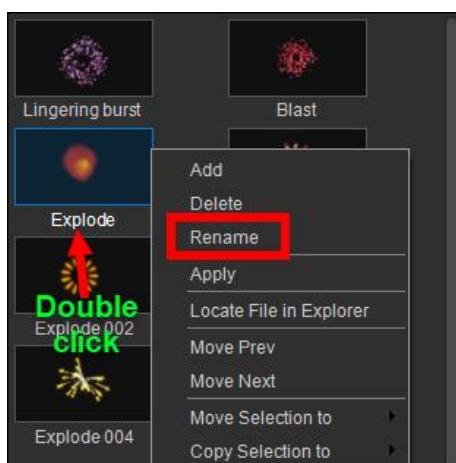

Template Library

The above marked buttons in the image below from left to right: Template Library List, “Add”, “Delete” and “Rename”

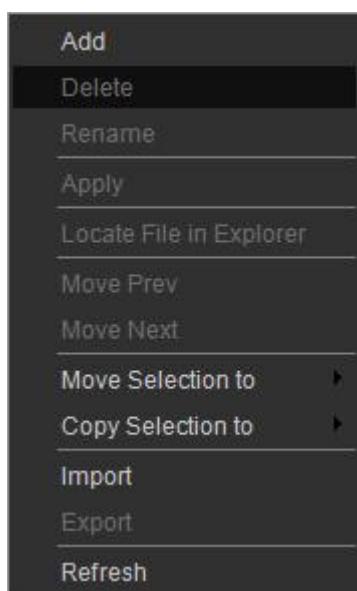

The below marked buttons from left to right are “Add”, “Delete”, “Apply”, “Import”, “Export”, “Refresh”, “Switch Display Mode” and Zoom In/Out bar-button in the image below.

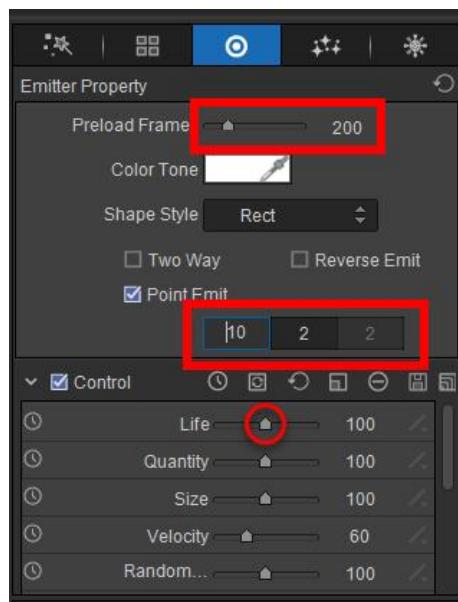

Changing template name: double-click on the template name or right-click on the template and choose "Rename" from the context menu, enter a new name and then click on the "OK" button.

Right-click on empty space in the library to see the context menu:

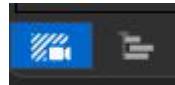

### Set Parameters

Set parameters by:

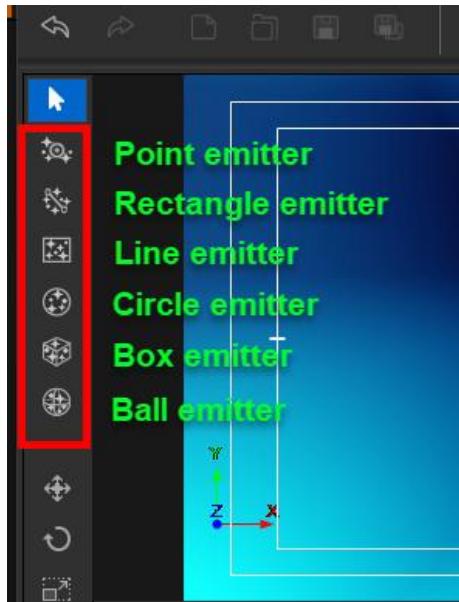

4. Clicking on the field and typing in the numbers
  5. Dragging the cursor over the field
  6. Moving cursor over the field then clicking on "<, >"
  7. Dragging the slide marked in green in the image above
- ◆ Status Bar

The buttons are “Syna background with host program” and “Use low layer image as background” used to set plugin background.

### 11.11.3. Create Emitter

Choose a particle type then click or drag mouse in Edit Screen.

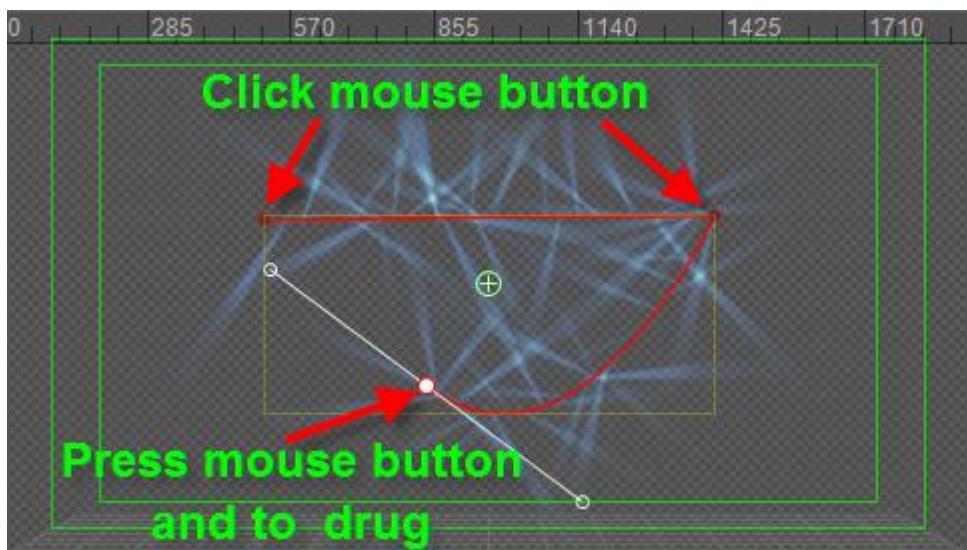

#### ◆ Point Emitter

Click the “Point Emitter” button then click on the Edit Screen.

#### ◆ Line Emitter

Click the “Line Emitter” button then left click or drag mouse in Edit Screen to create emitter points. Press **ESC** or right click to finish creating.

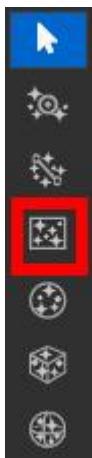

You can Bezier Edit the line.

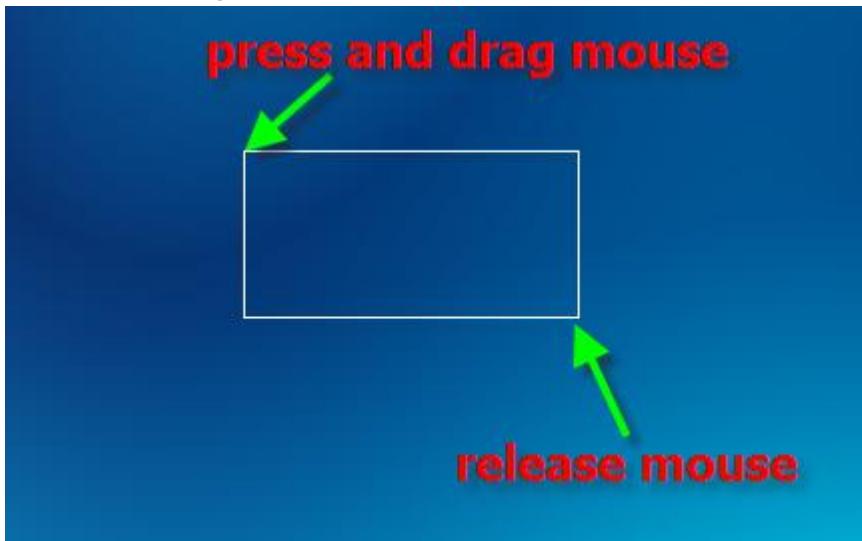

#### ◆ Other Emitter

Other Emitter includes Rectangle Emitter, Circle Emitter, Box Emitter and Ball Emitter. Here take Rectangle Emitter as example.

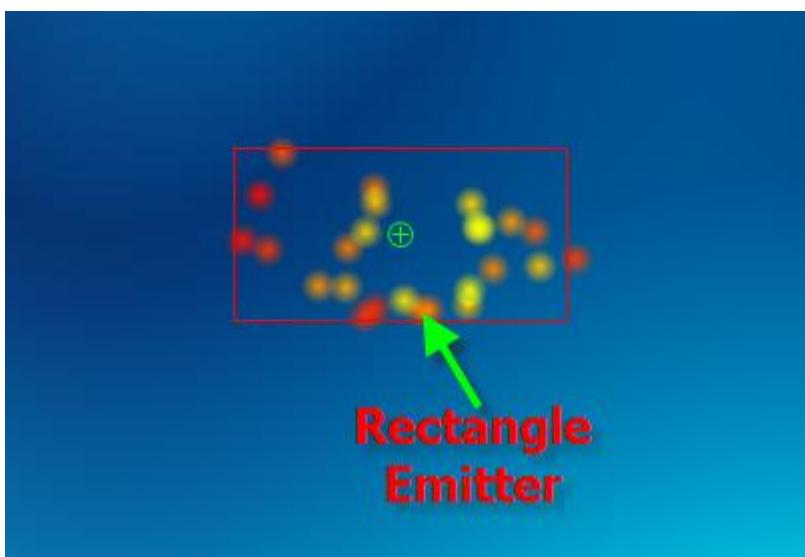

1. Click the “Rectangle Emitter” button.

2. Press and drag mouse in Edit Screen.

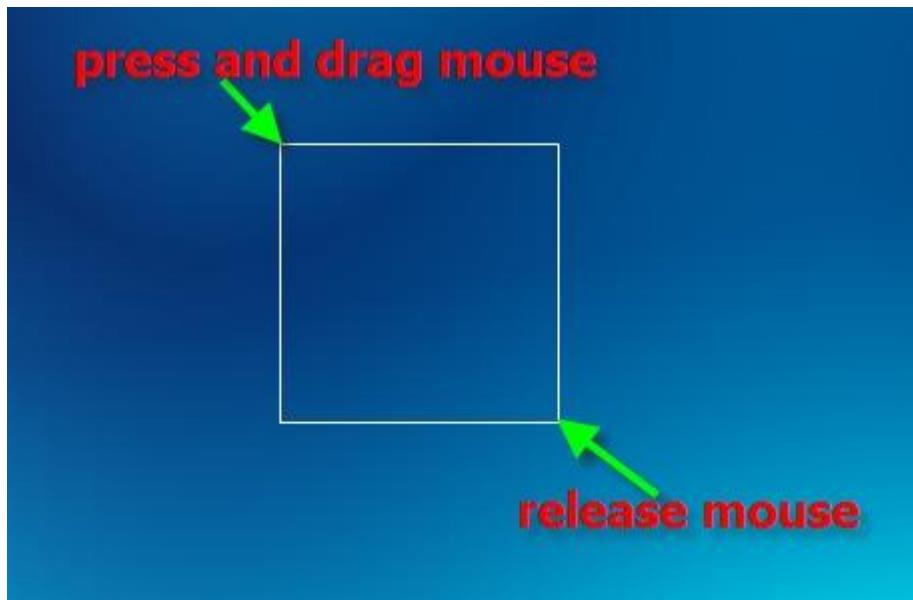

3. After creating a rectangle, release mouse.

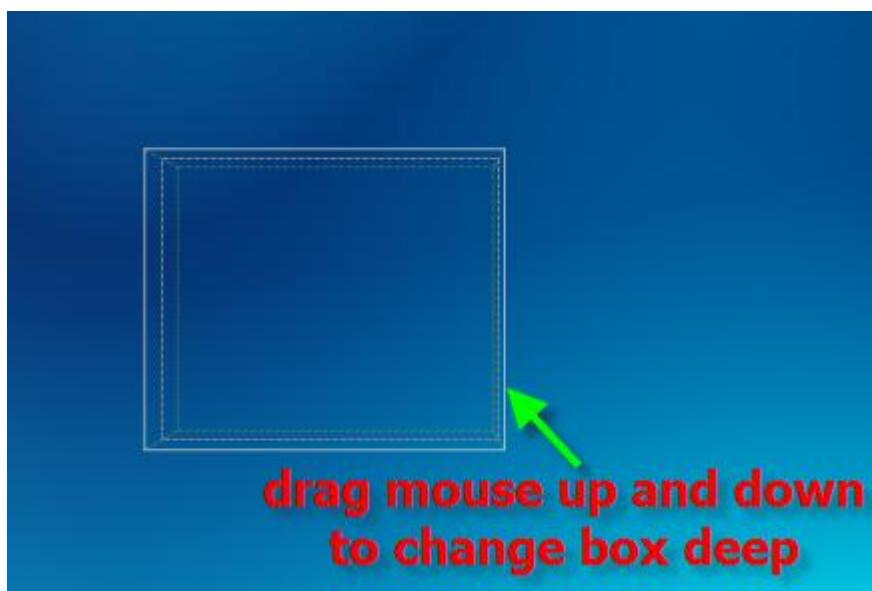

**Note:** holding Ctrl and dragging mouse, you can create a square.

**To create Box particle:**

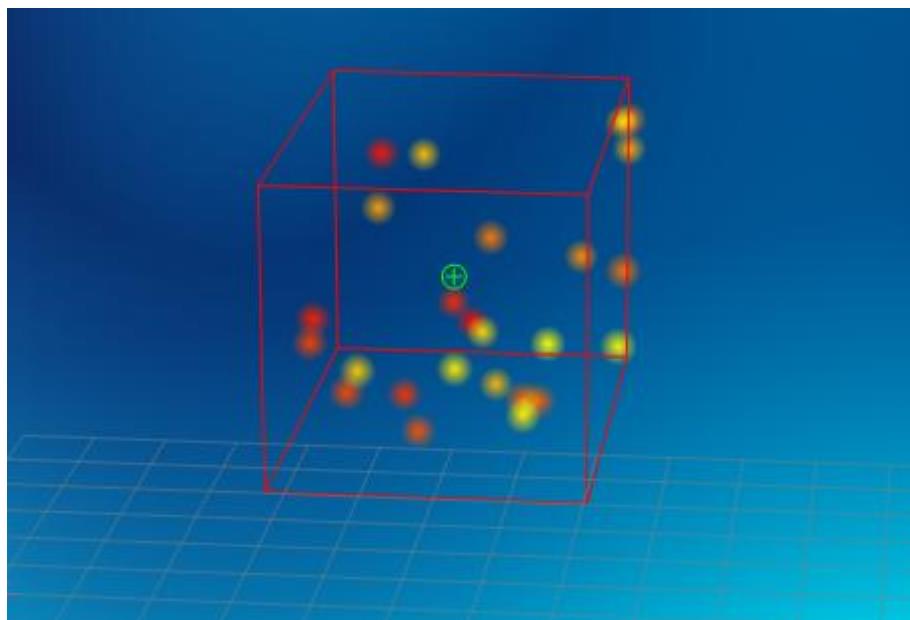

1. First, click the “Box Emitter” button.
2. Second, press and drag mouse then release in Edit Screen.

Drag mouse up and down to change box deep.

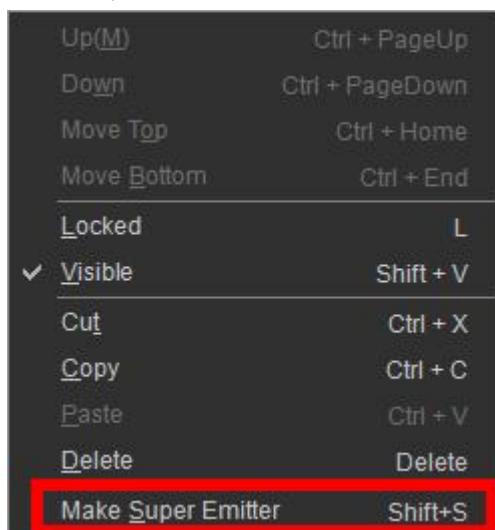

3. Finally, left click.

#### 11.11.4. Make Super Emitter

Method 1: In Edit Screen right click an emitter, select “Make Super Emitter” from the context menu or press **Shift+S**.

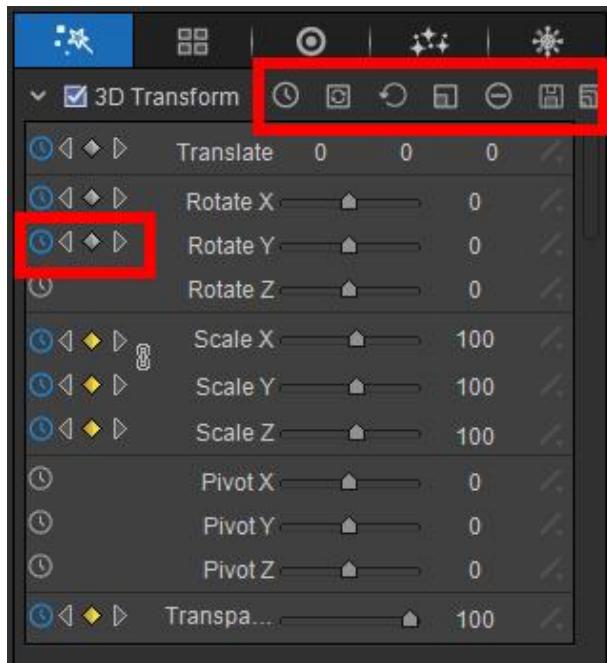

Method 2: In Timeline Window right click an emitter track, select “Make Super Emitter” from the context menu.

#### 11.11.5. 3D Transform

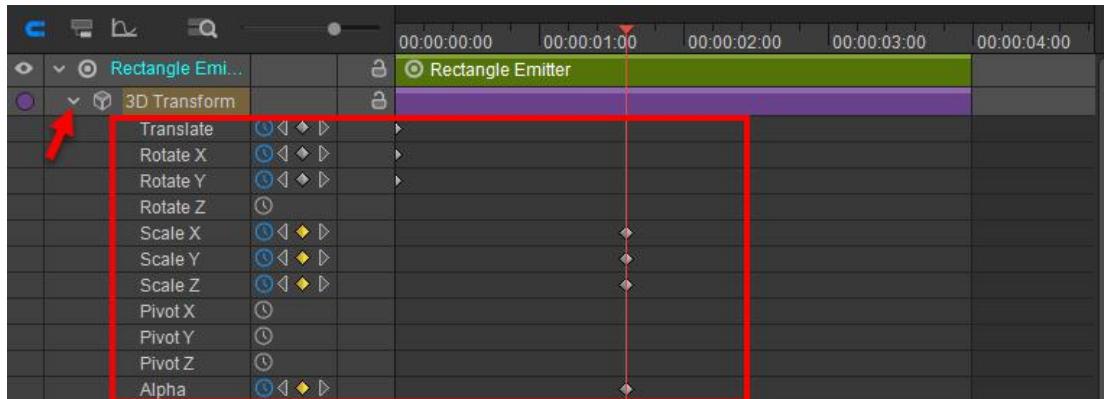

##### ◆ Set 3D Transform Parameters in Properties Window

Select a particle emitter in Edit Screen then in Properties Window click on the “3D Transform” button to open the 3D Transform tab. The above buttons from left to right are “All Parameters Animating”, “Reset Current Keyframe”, “Reset”, “Fold/Expand”, “Delete” and “Save File” in the image below.

#### Add/Remove Keyframe

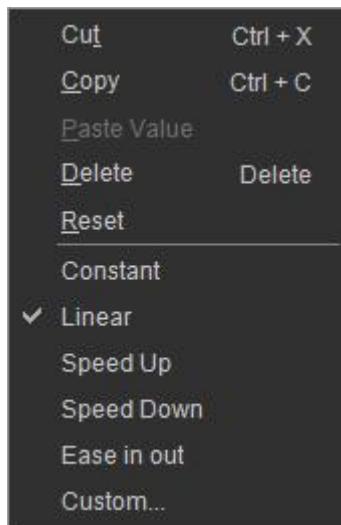

In Timeline Window click on , a keyframe will be added at current play position. You can also click on to add keyframe at current play position or click the “Add/Remove Keyframe” button in 3D Transform tab. The left marked buttons are “Toggle Keyframe”, “Go To Pre/Head Keyframe”, “Add/Remove Keyframe” and “Go To Next/Tail Keyframe” in the image above.

#### Set Keyframe Parameters

Click on the value and typing in numbers then press **ENTER**. Please refer to other chapters about the other methods.

Right-click on a keyframe marker to see the context menu:

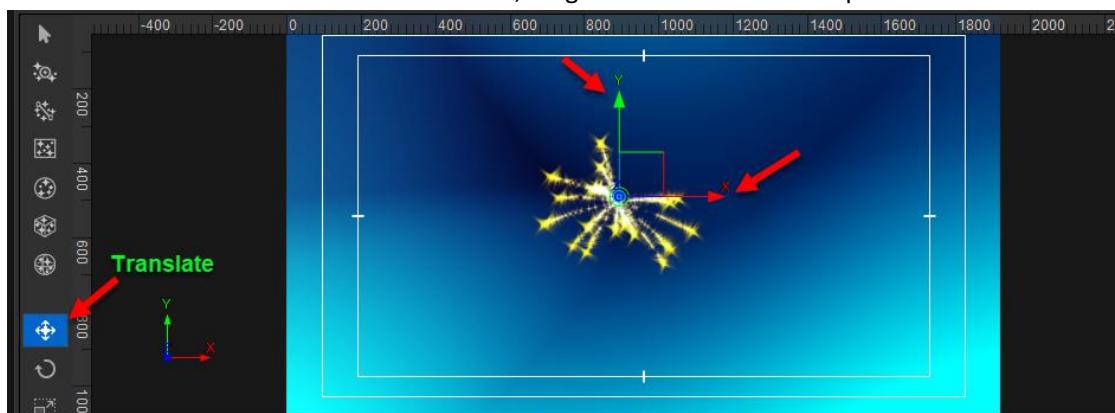

#### ◆ Set 3D Transform Parameters in Edit Screen

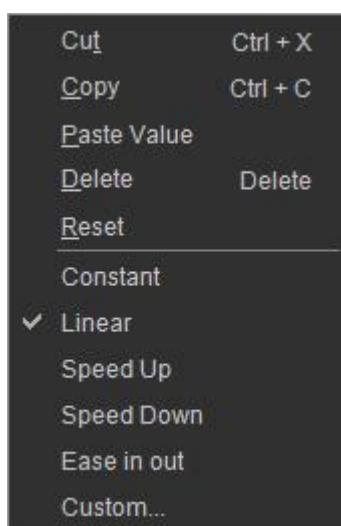

Select a particle emitter then click the 3D Transform buttons in Edit Screen.

##### Translate

In Edit Screen click on the “Translate” button, drag the markers to set XYZ position.

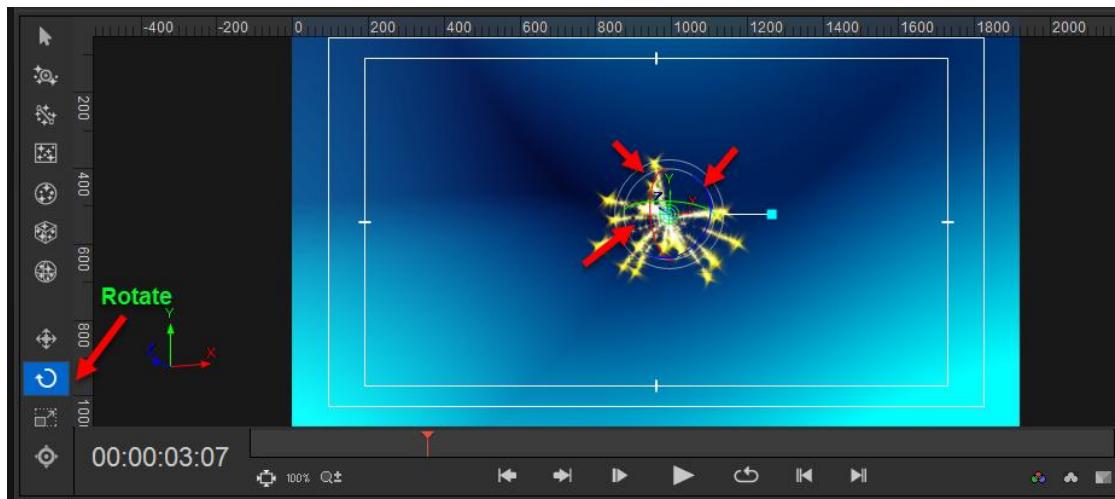

Move timeline onto a keyframe, then in Edit Screen right click other keyframe markers to see the context menu.

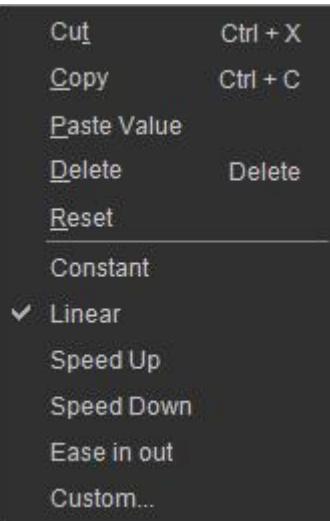

##### Rotate

In Edit Screen click on the “Rotate” button, drag the markers to set XYZ rotation.

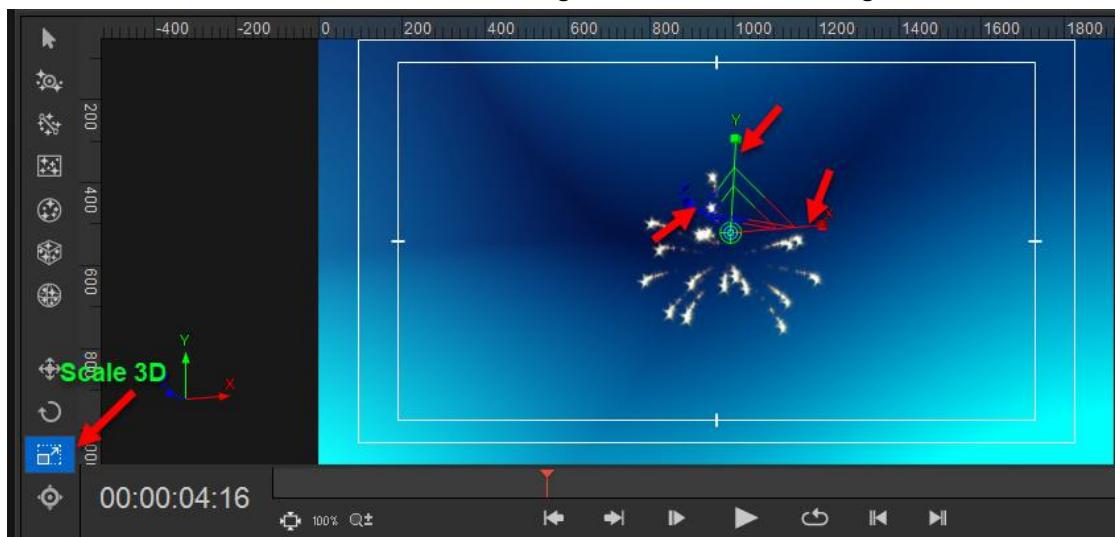

Move timeline onto a keyframe, then in Edit Screen right click other keyframe markers to see the context menu.

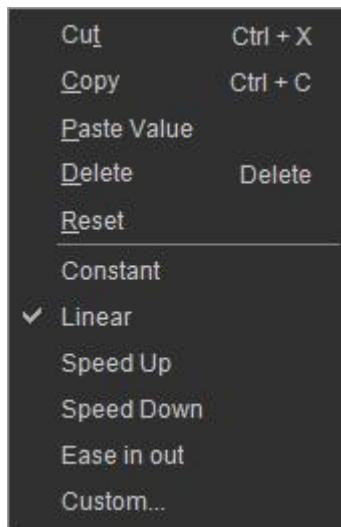

### Scale 3D

In Edit Screen click on the “Scale 3D” button, drag the markers to scale along XYZ axis.

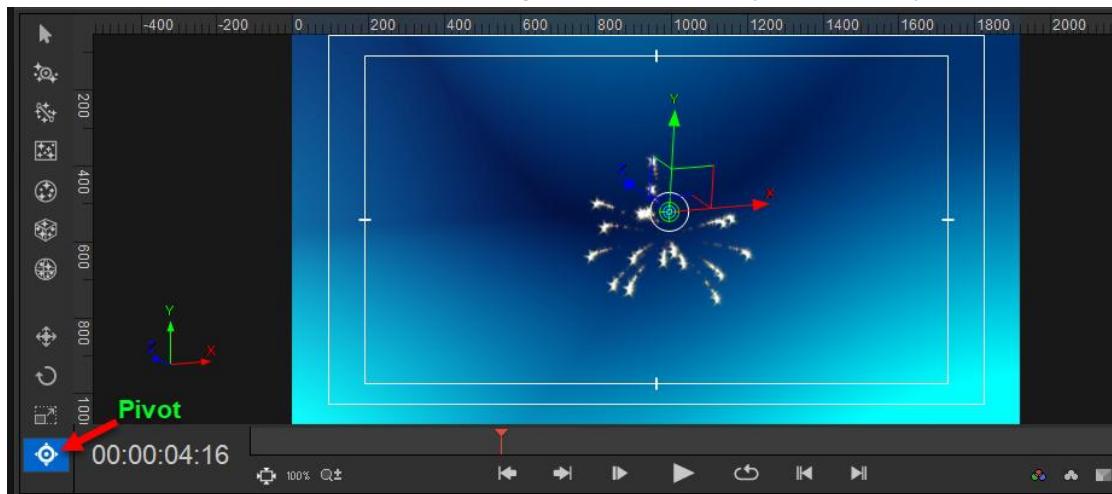

Move timeline onto a keyframe, then in Edit Screen right click other keyframe markers to see the context menu.

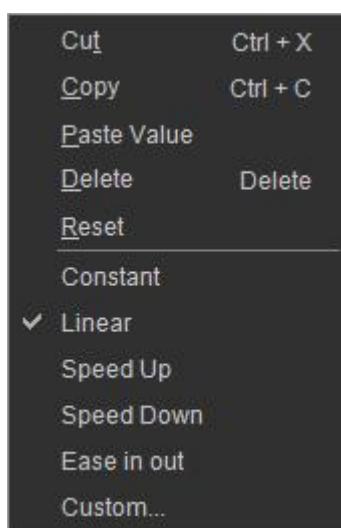

### Pivot

In Edit Screen click on the “Pivot” button, drag the markers to set pivot XYZ axis position.

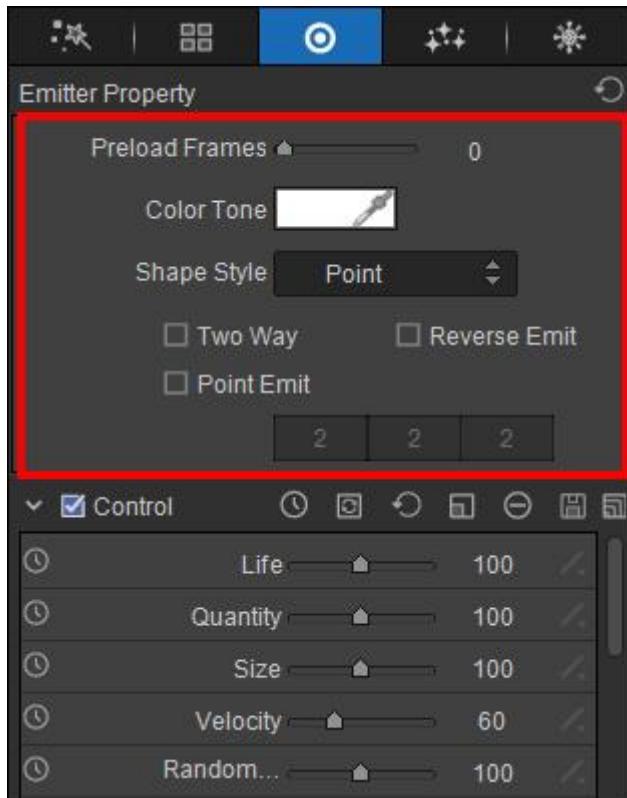

Move timeline onto a keyframe, then in Edit Screen right click other keyframe markers to see the context menu.

## 11.11.6. Emitter Property

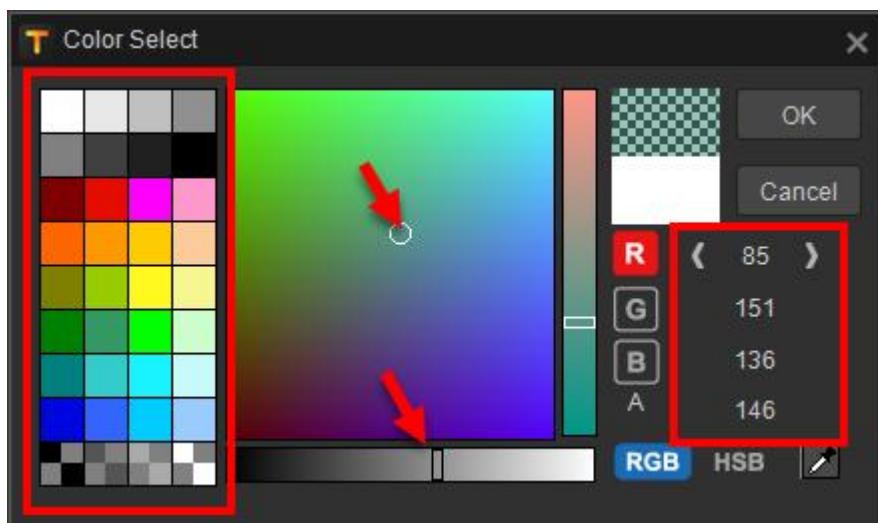

In Edit Screen select an emitter then in Properties Window, click on the “Emitter Property” button to open the Emitter Property tab. Emitter Property tab consists of Emitter Property screen and Control screen.

### ◆ Emitter Property

**Preload Frame:** set emitter head keyframe effect as the preload frames effect.

**Color Tone:** click the “Color Tone” button, the Color Select window will appear.

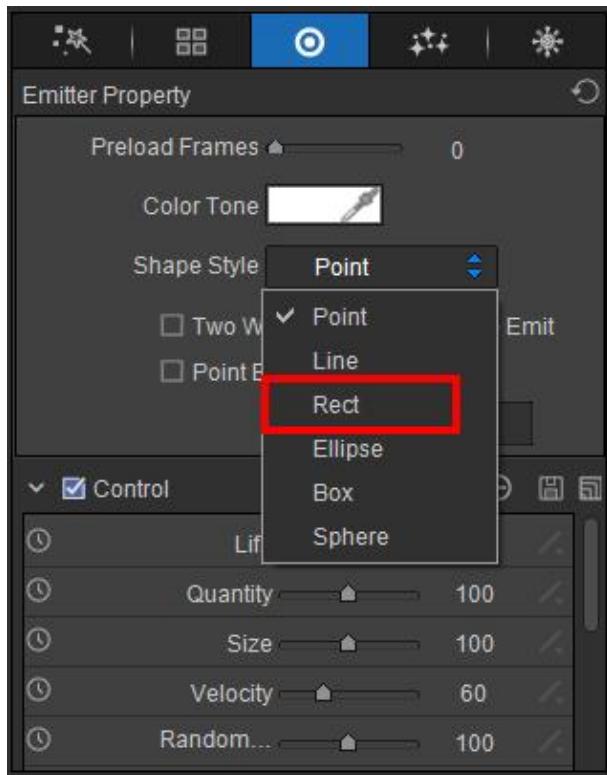

To set color:

6. Choose one of the 32 preset colors

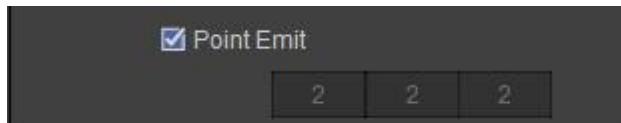

7. Use the cursor to pick a color from the palette
8. Set parameters in the RGB Alpha fields
9. Use the scroll bar to set alpha

**Shape Style:** set particle emitter shape style.

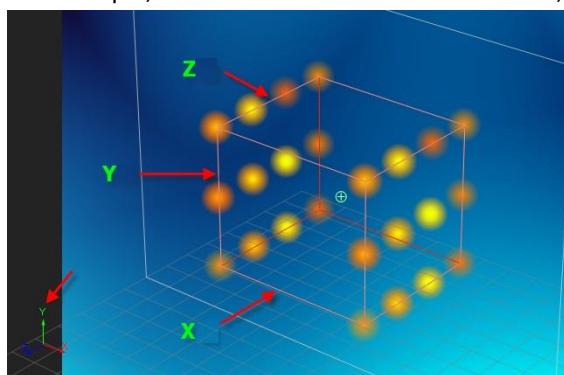

**Emit Direction:** set particle emit direction.

**Point Emit:** set emitter number in XYZ axis.

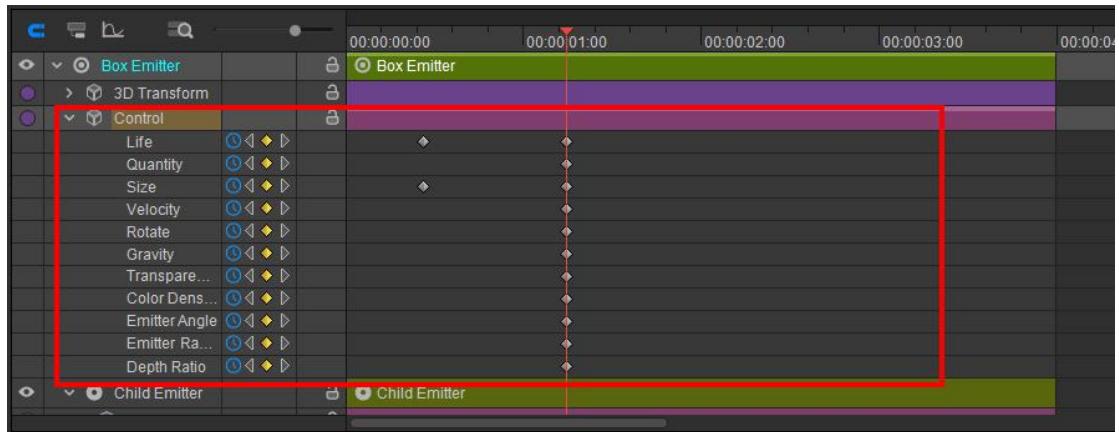

For example, Box emitter number in XYZ axis is 2, 3 and 4 as shown below.

#### ◆ Control Property

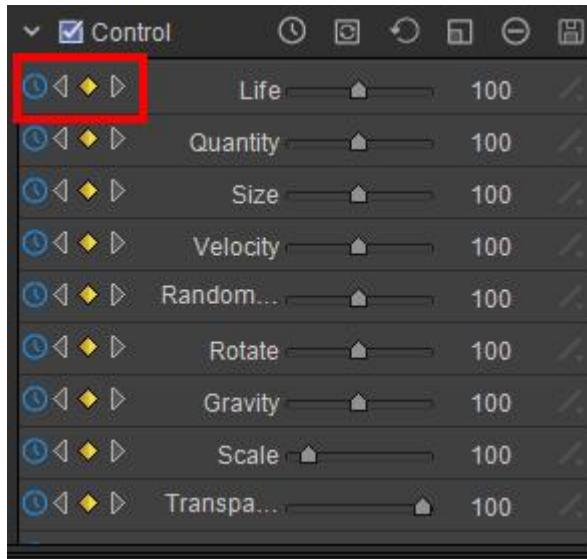

Expand the Control track in Timeline Window.

In Timeline Window expand the Control track to see that Control properties include Life, Quantity, Size and so on.

#### Add/Remove Keyframe

In Timeline Window click on , a keyframe will be added at current play position. You can also click on to add keyframe at current play position or click the “Add/Remove Keyframe” button in 3D Transform tab. The left marked buttons are “Toggle Keyframe”, “Go To Pre/Head Keyframe”, “Add/Remove Keyframe” and “Go To Next/Tail Keyframe” in the image below.

#### Set Keyframe Parameters

Click on the value and typing in numbers then press **ENTER**. Please refer to other chapters about the other methods.

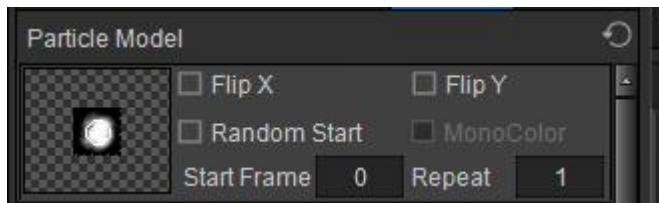

## 11.11.7. Particle Property

Click the selected emitter track to enable the Particle Property tab. Particle Property tab consists of Particle Model screen and Particle Option screen.

## ◆ Particle Mode

### Particle Image

**Flip X:** enable “Flip X”, particle image will flip horizontal.

**Flip Y:** enable “Flip Y”, particle image will flip vertical.

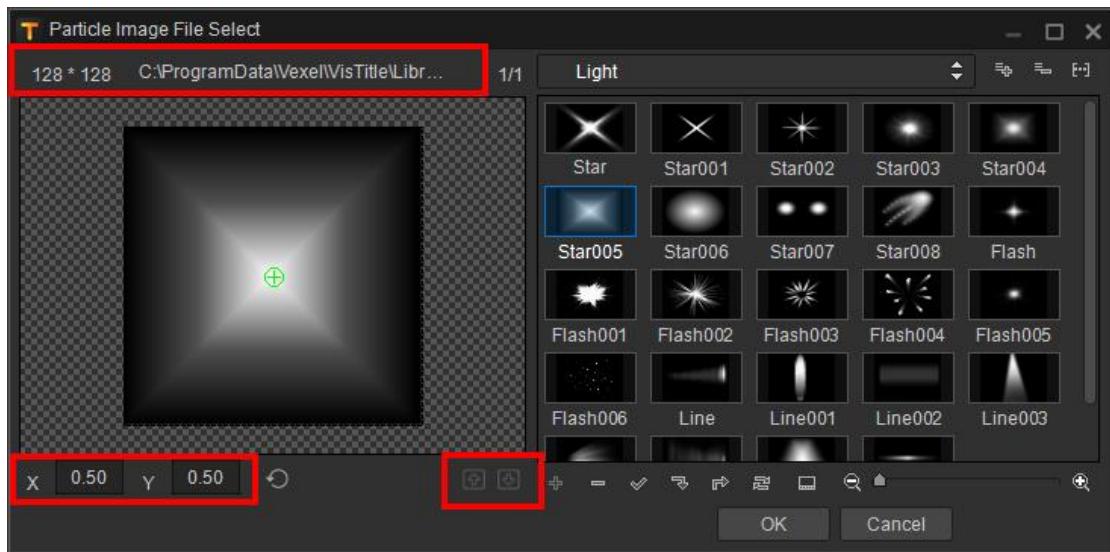

**Random Start:** enable “Random Start”, particle start frame effect is random frame effect of particle image animation

**Start Frame:** set particle start frame effect as a certain frame effect of particle image animation.

**Repeat:** set particle animation speed. For example, inputting 5, you can see that next frame animation plays every 5 frame.

**MonoColor:** set particle image color as monicolor.

Click the left marked space, the Particle Image File Select window will appear. The left part is particle image basic information and preview. The right part is particle image template library.

You can preview in the left part after click an image in the right part. The above marked is image size, path and current preview frame/preview frames. The left marked is image pivot position. You can change and reset the X, Y parameters or drag the marked pivot. The right marked buttons are “Prev Frame” and “Next Frame”

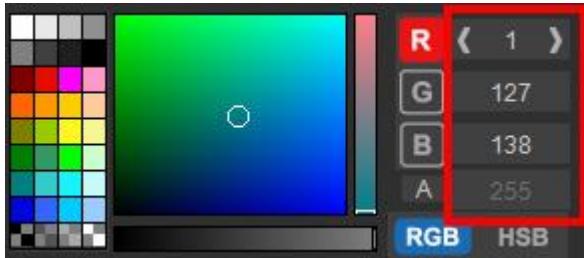

#### Particle Color

You can click the left above marked button or check the below marked option to link Color and Alpha.

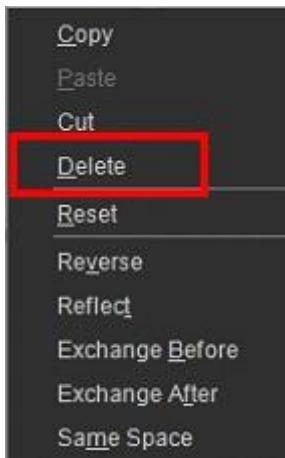

In the image above click under the color bar to add a Marker, drag to set position. Set the central position between colors using the blurred block over the color bar. First click on Color Marker, then set color. To set color:

1. Choose one of the 32 preset colors
2. Use the cursor to pick a color from the palette
3. Set parameters in the RGB Alpha fields

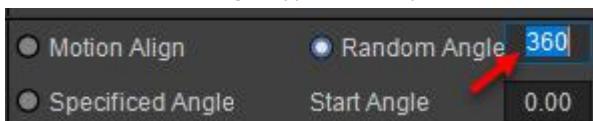

Press **Delete** to remove Marker, or right click Marker then select “Delete”.

#### Motion Angle

Choose a motion angle type then input numbers.

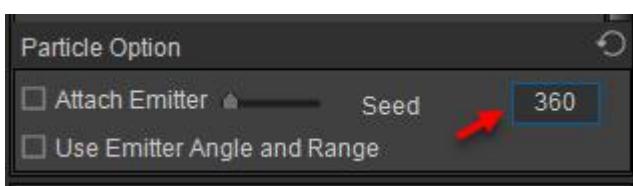

#### ◆ Particle Option

**Attach Emitter:** after enabling “Attach Emitter”, you can use the scroll bar to set distance between particle and emitter.

**Seed:** set random seed number

**Use Emitter Angle and Range:** enable/disable emitter angle and range

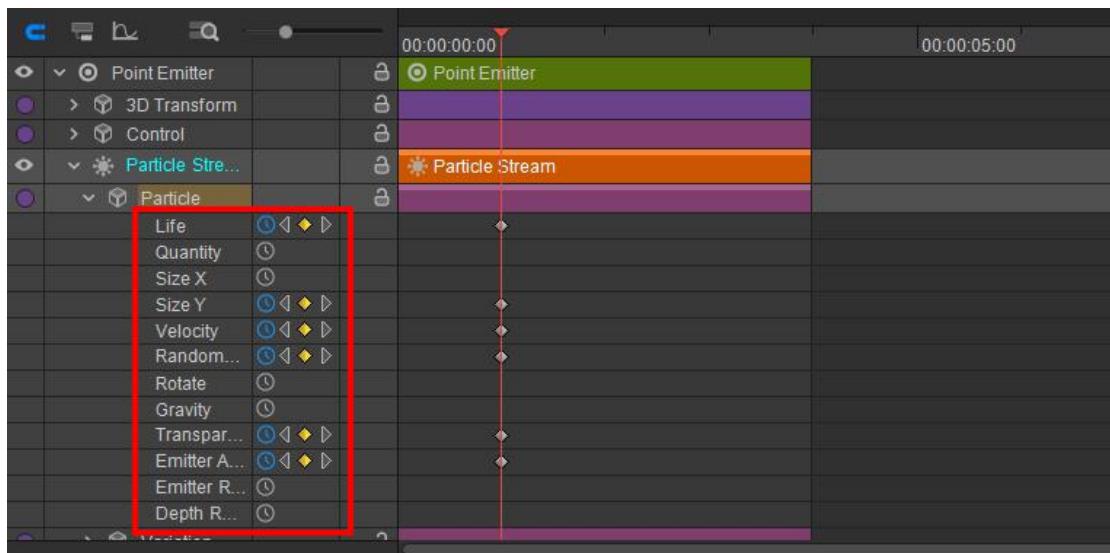

The marked is “Reset” button to reset all Particle Option parameters.

## 11.11.8. Particle Parameter

Click the selected emitter track to enable the Particle Parameter tab. Particle Parameter tab consists of Particle screen, Variation screen and Over Life screen.

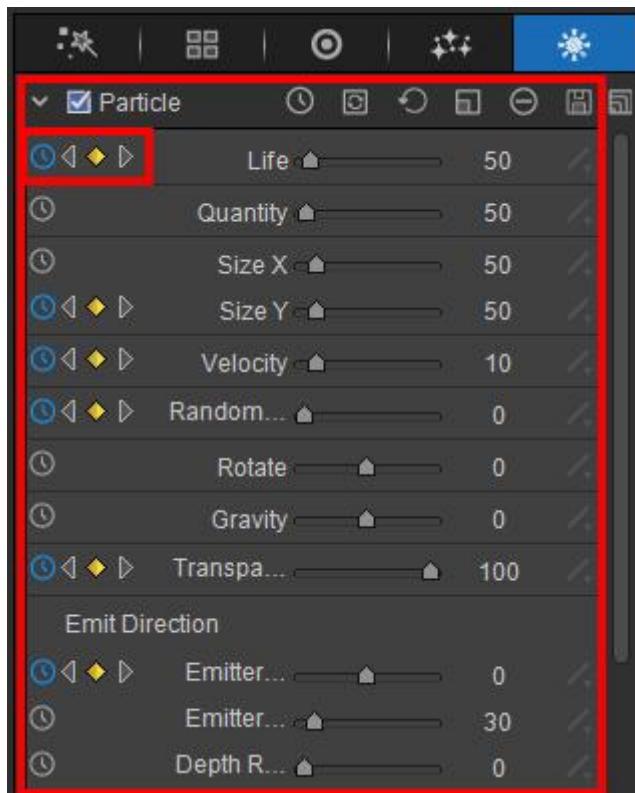

#### ◆ Particle

In Timeline Window expand the Particle Stream-Particle track.

### Add/Remove Keyframe

In Timeline Window click on a keyframe will be added at current play position. You can also click on to add keyframe at current play position or click the “Add/Remove Keyframe” button in 3D Transform tab. The middle marked buttons are “Toggle Keyframe”, “Go To Pre/Head Keyframe”, “Add/Remove Keyframe” and “Go To Next/Tail Keyframe” in the image below.

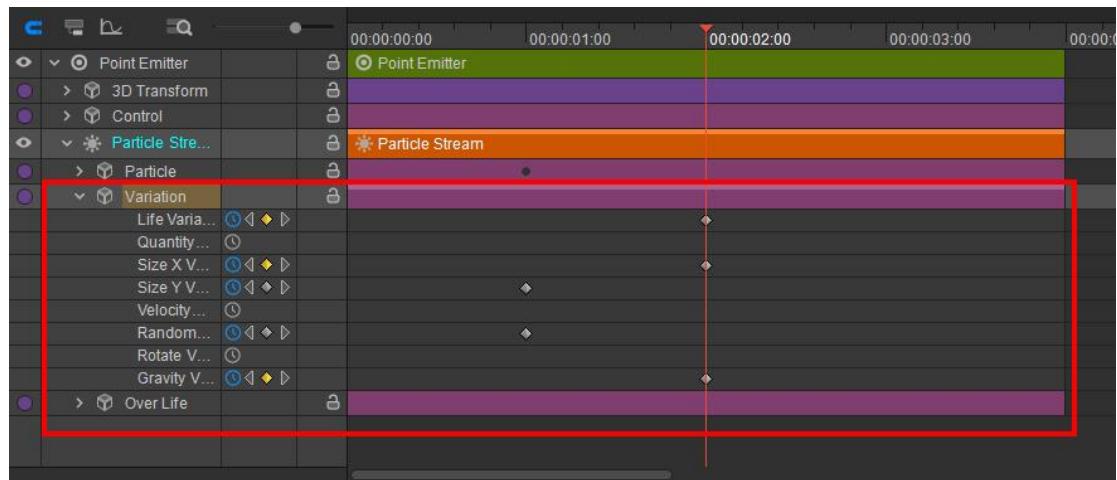

### Set Keyframe Parameters

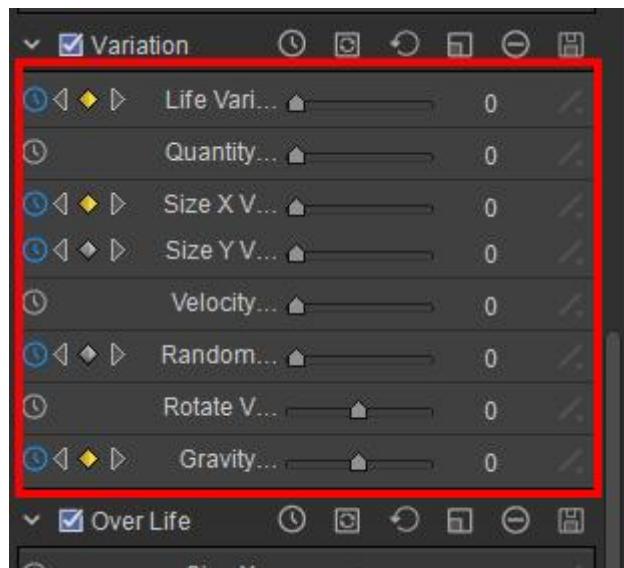

Click on the value and typing in numbers then press **ENTER**. Please refer to other chapters about the other methods.

#### ◆ Variation

In Timeline Window expand the Particle Stream-Variation track.

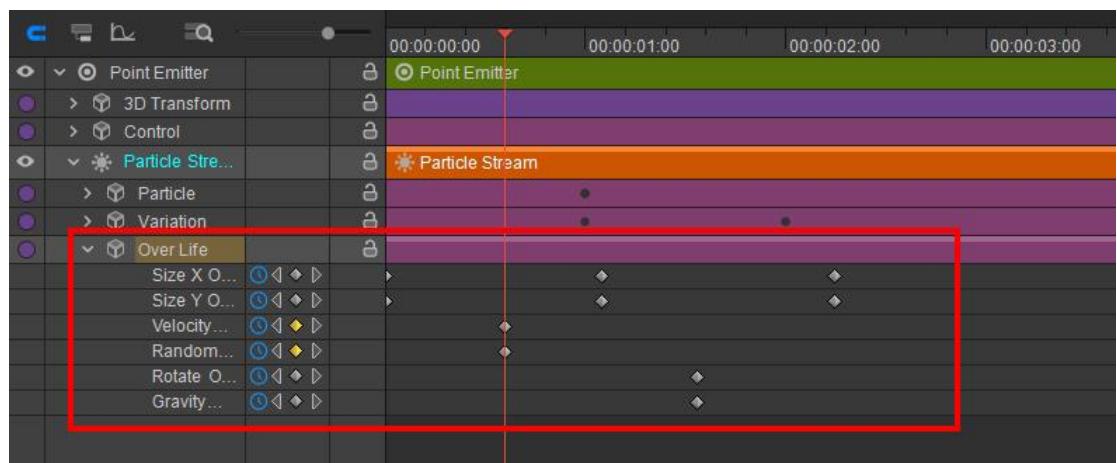

Variation parameters:

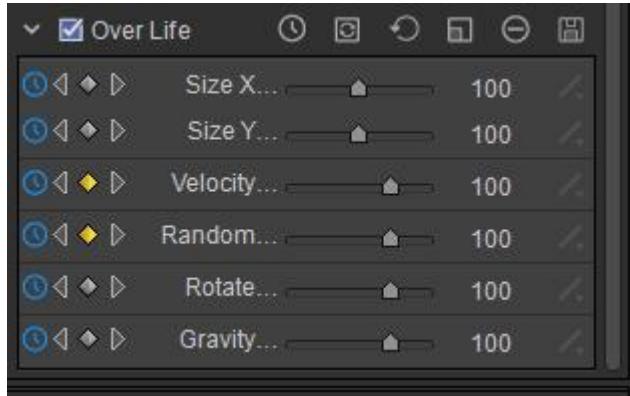

Please refer to other chapters about the methods of setting parameters.

#### ◆ Over Life

In Timeline Window expand the Particle Stream-Over Life track.

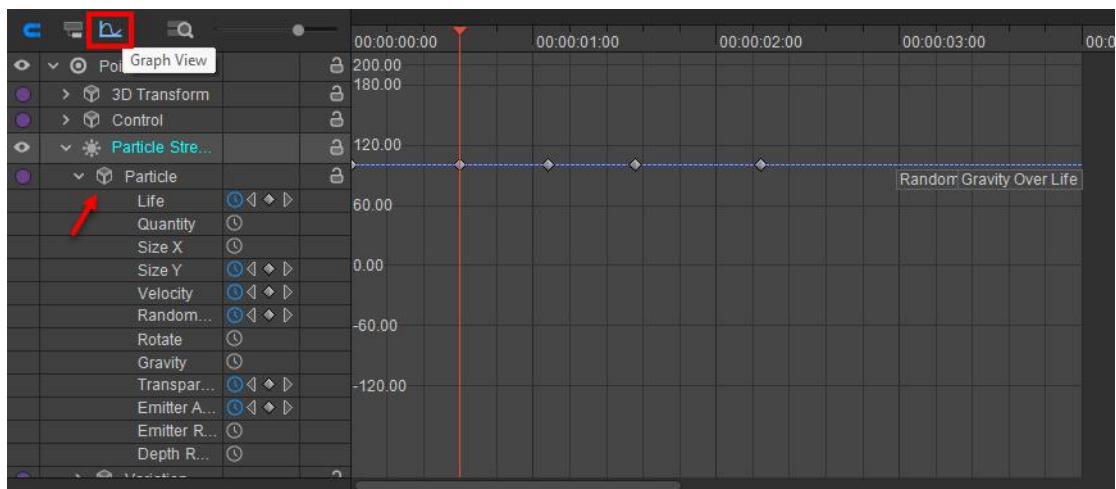

Over Life parameters:

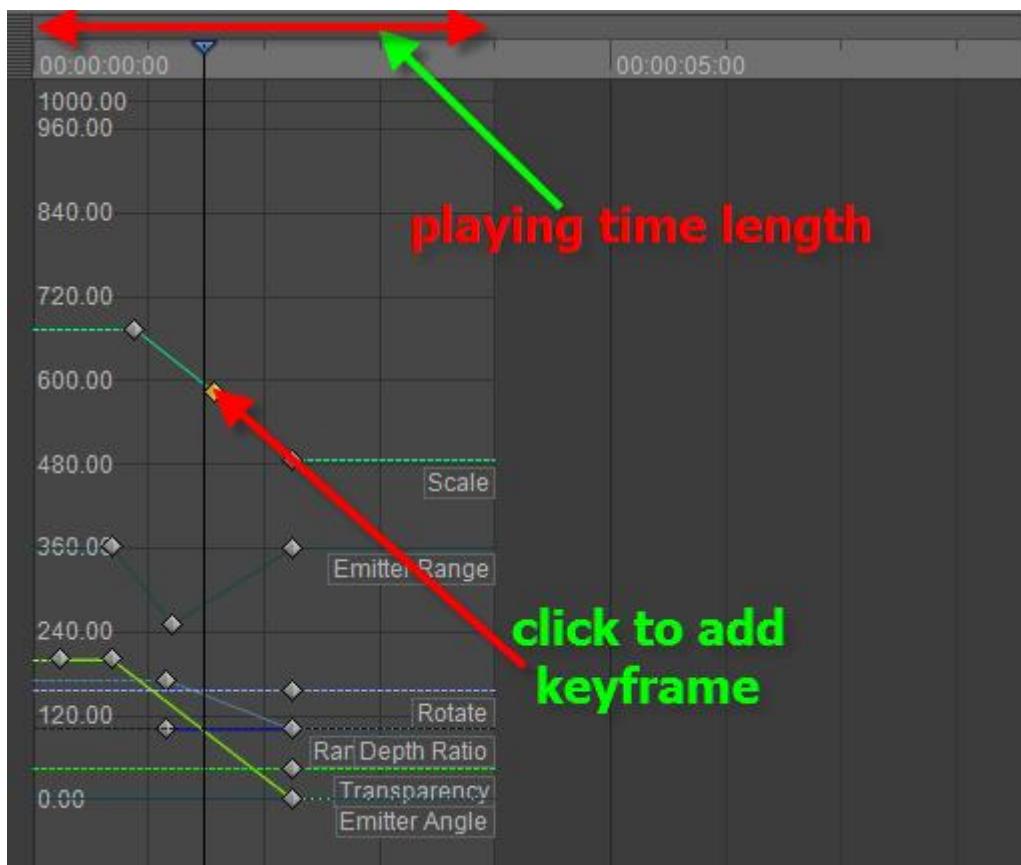

Please refer to other chapters about the methods of setting parameters.

### 11.11.9. Edit Graph View

Choose “Graph View” button in Timeline Window. Every property graphic view has its own color.

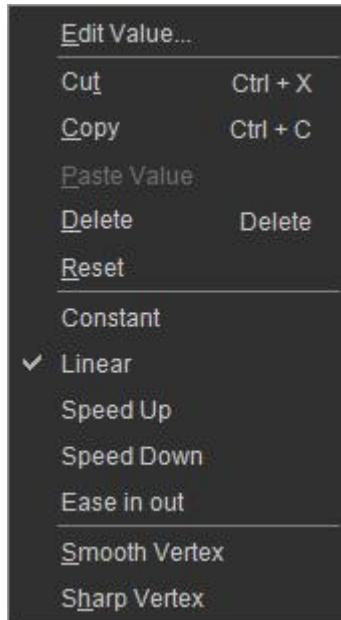

Move timeline in Graph View window, then click to add a keyframe. The marked time by double-arrow is playing time length.

Click keyframe marker and drag up and down to adjust the value.

Right-click selected keyframe marker to see the context menu:

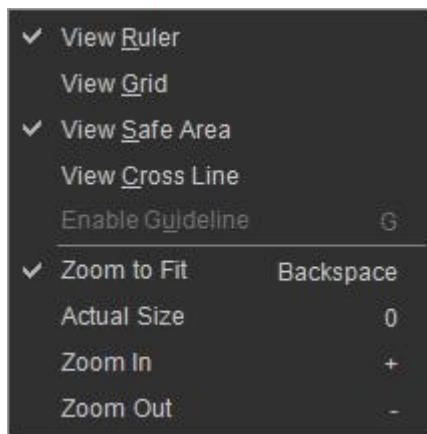

Right-click the area where there are not keyframe markers to see the context menu:

## 11.11.10. Set Edit Screen

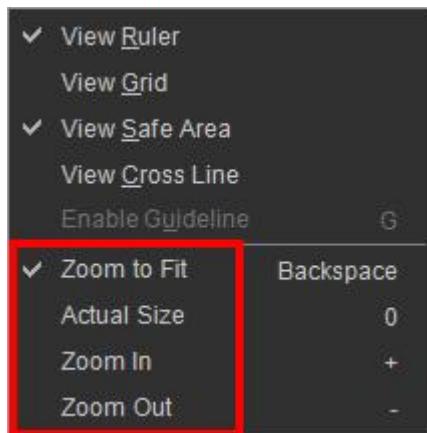

### ◆ Edit Ruler or Grid

Right-click in Edit Screen, choose one option.

### ◆ Set View Zoom

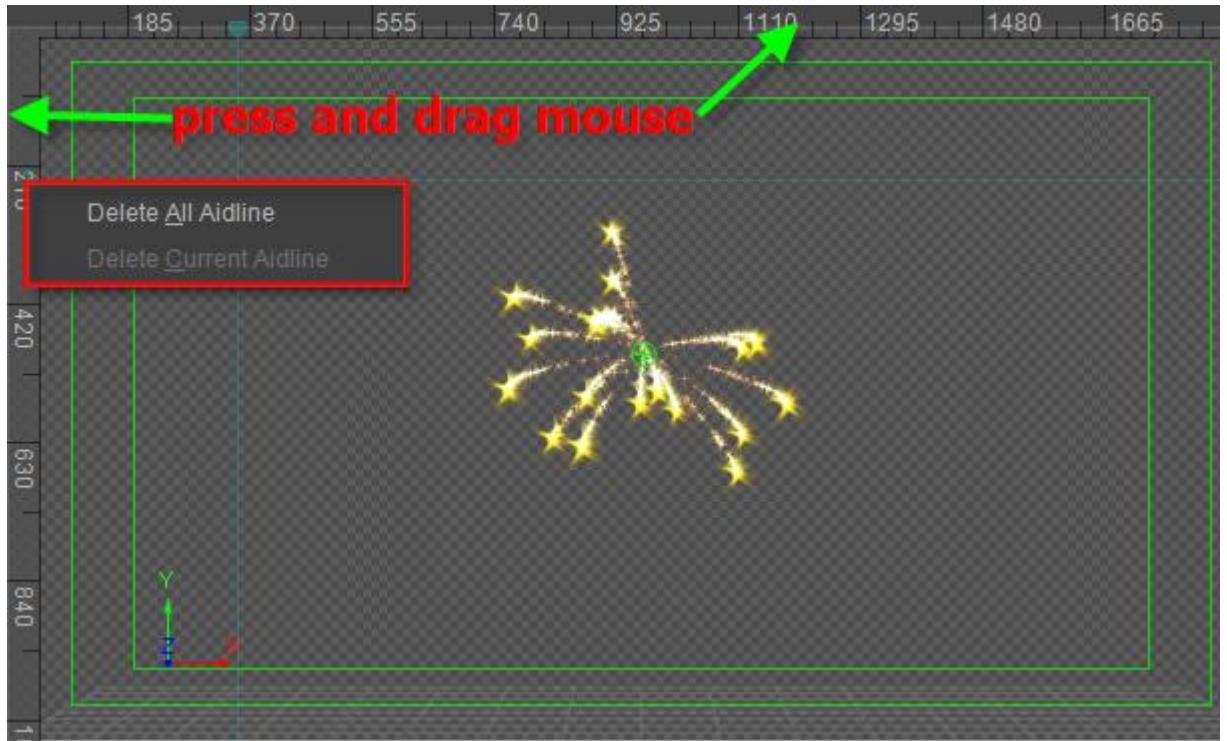

Method 1: Right-click then select

Method 2: Right-click and drag cursor in Edit Screen

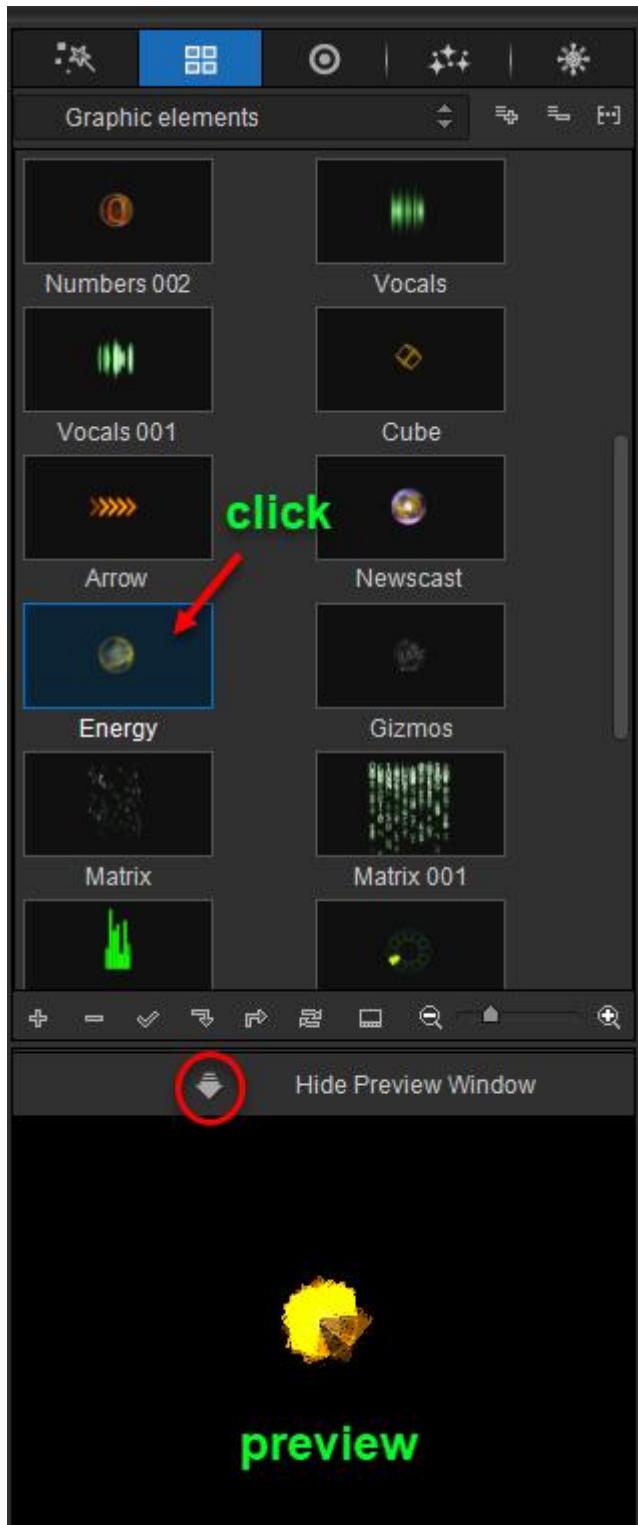

### ◆ Aidline

To create aidline you can left click and drag cursor in ruler area. To delete the aidline, you can right-click in the aidline head.

#### 11.11.11. How to Preview Particle

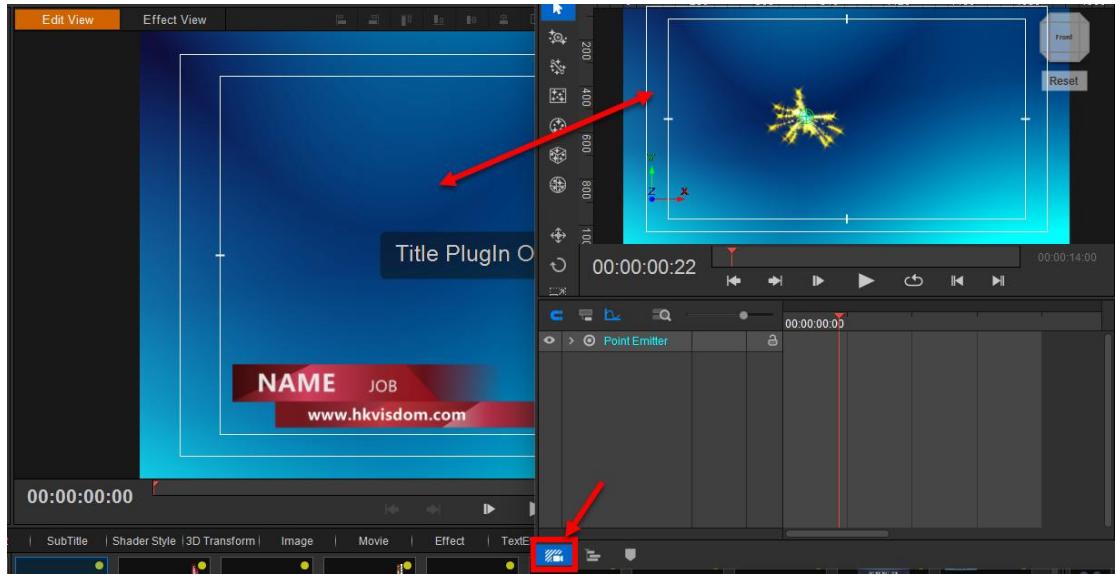

In Template Library tab click a particle, you can preview in the Preview Window.

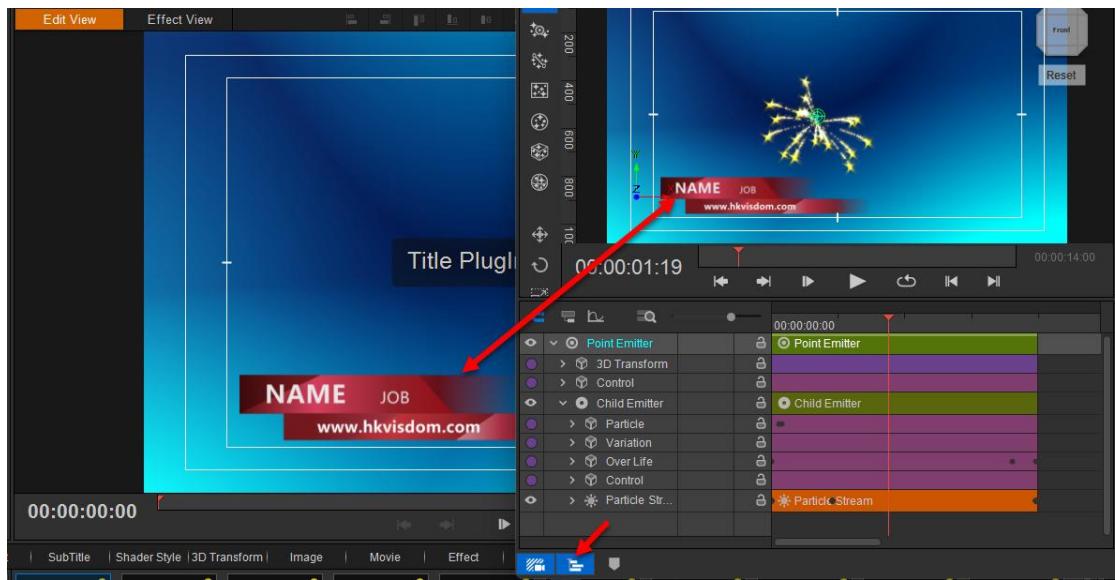

Click the marked “Show/Hide Preview Window” button to show/hide Preview Window.

### 11.11.12. Set Background

Enable “Sync background with host program” in status bar to set same background with the host program background.

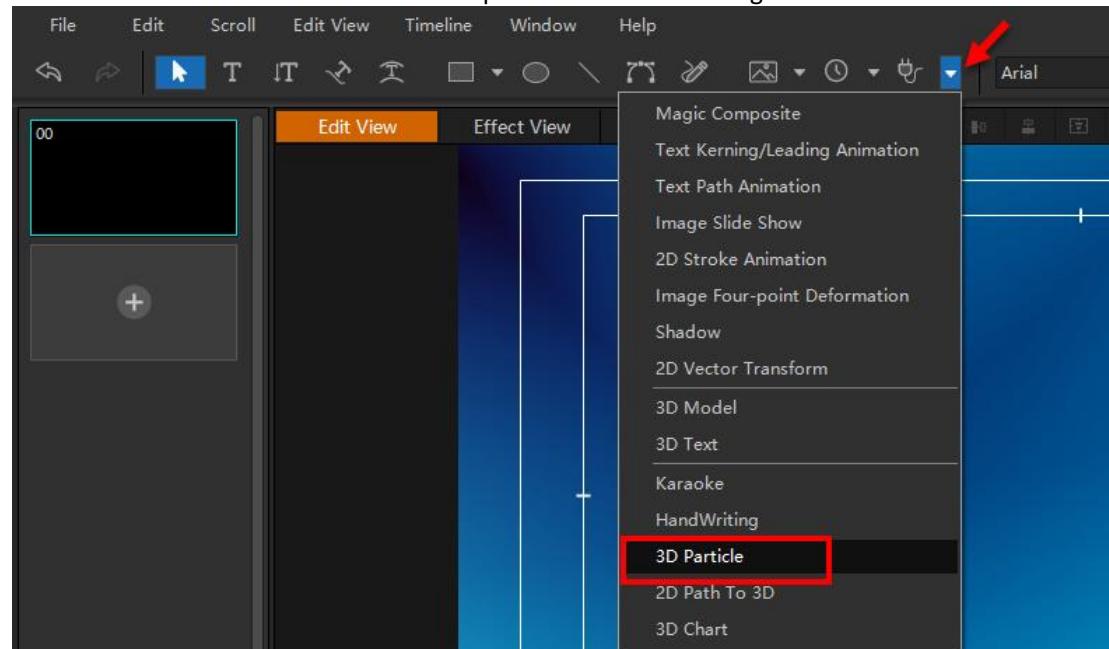

Enable “Use low layer image as background” in status bar to set low layer image in host program as background.

### 11.11.13. Operation Flow of 3D Particle

#### 1. Run 3D Particle Plugin

Choose “3D Particle” button from the drop-down list of “Title Plugin”.

#### 2. Create Particle Emitter

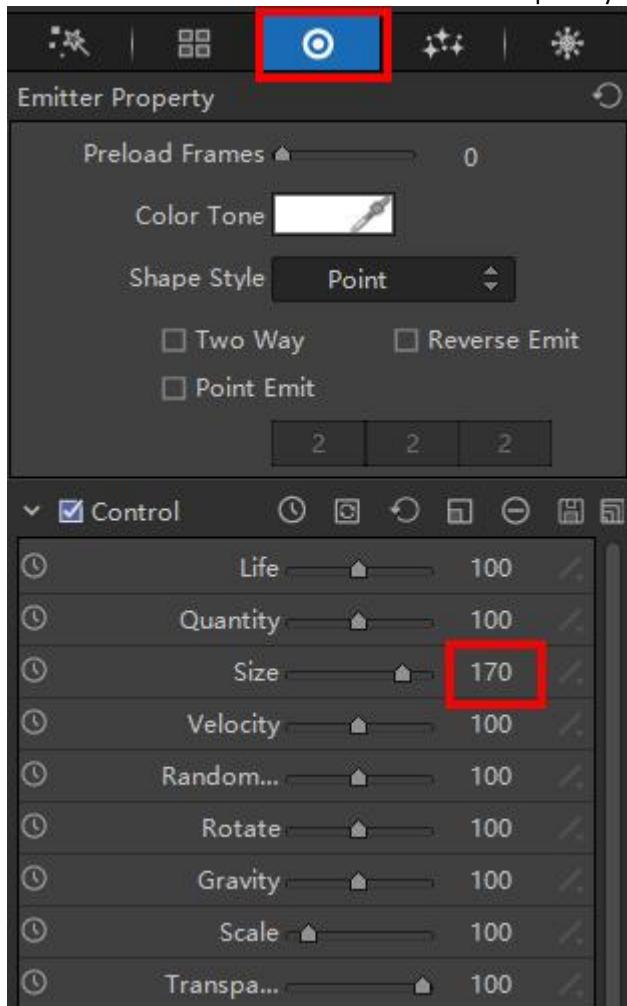

Press the “Point Emitter” button then click on the Edit Screen.

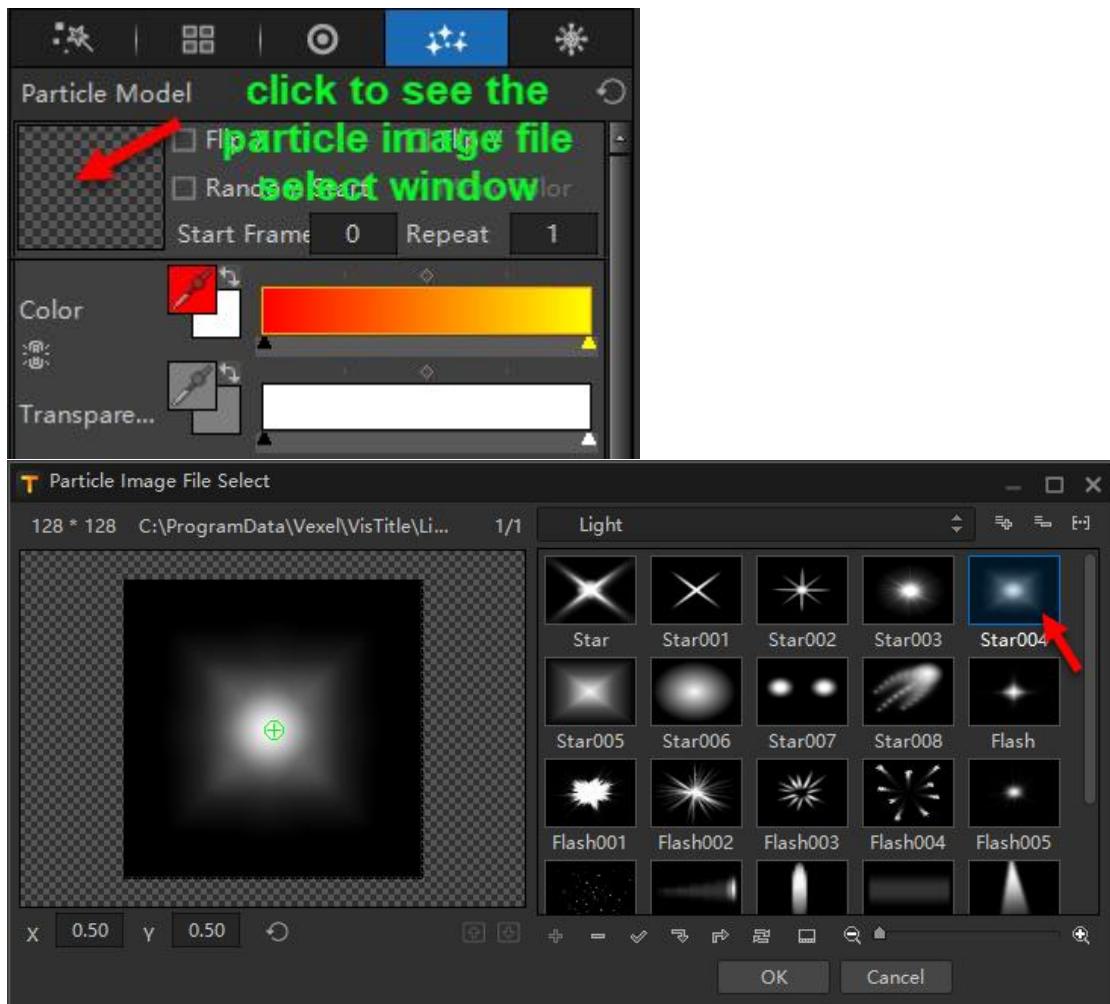

### 3. Set Emitter Parameters

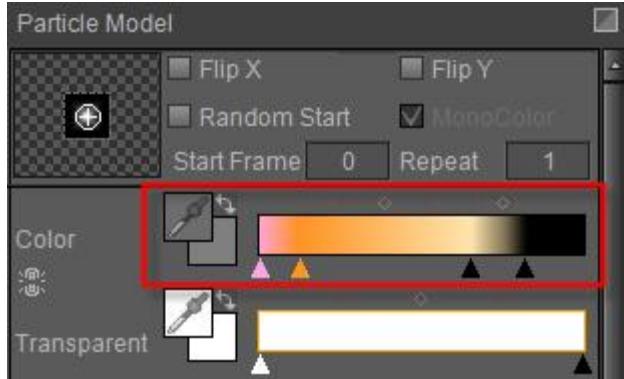

Set size as 170 in Control screen of Emitter Properties tab.

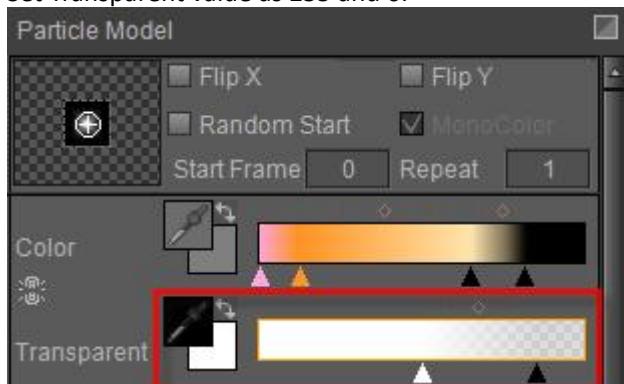

4. In Particle Property tab click the marked field shown below. Then in Particle Image File Select window select Star004.

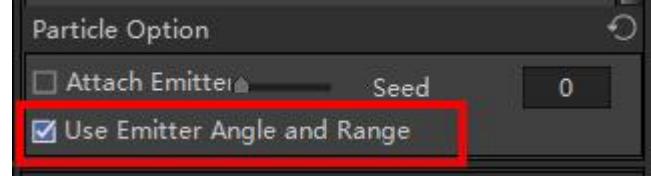

Set the four color markers RGB as (255,126,154), (255,137,34), (255,252,165) and (0,0,0).

Set Transparent value as 255 and 0.

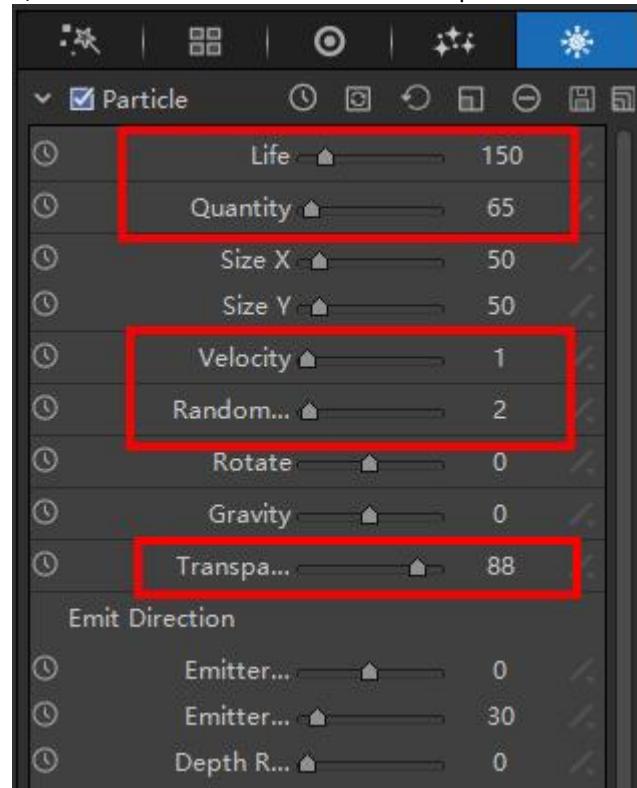

Check “Use Emitter Angle and Range” in Particle Option screen.

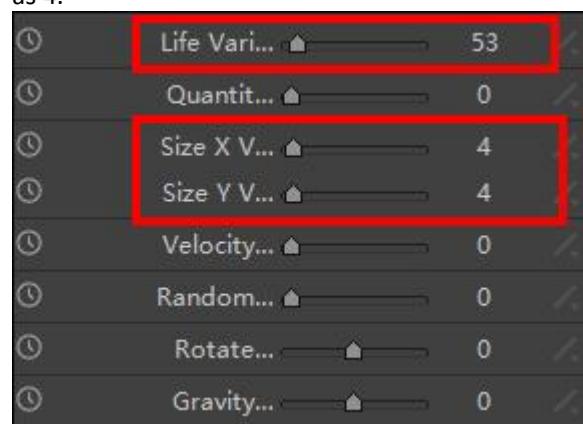

##### 5. Set Particle Parameters

In Particle screen of Particle Parameter tab, set Life value as 150, Quantity value as 65, velocity as 1, Random Motion value as 2 and Transparent value as 88.

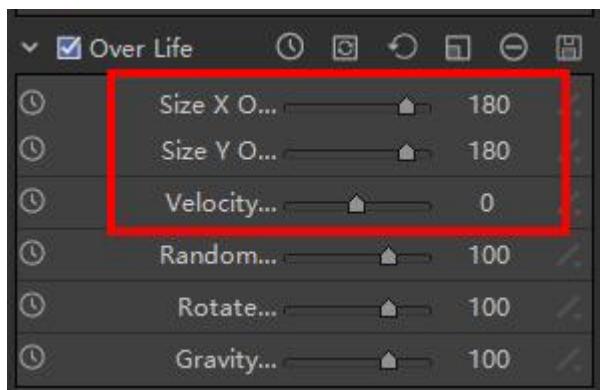

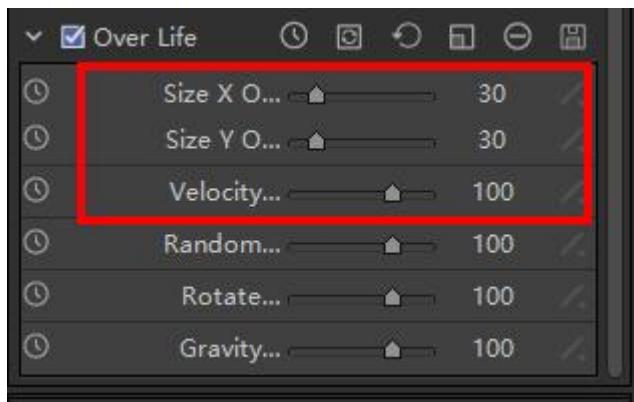

In Variation screen, set Life Variation value as 53, Size X Variation value and Size Y Variation value as 4.

In Over Life Screen, click the “Toggle Animation” button of Size X Over Life. Set the value as 30 then click the “Go To Next/Tail KeyFrame” button and set the value as 180.

Click the “Toggle Animation” button of Size Y Over Life. Set the Head Keyframe value as 30 and the Tail Keyframe value as 180.

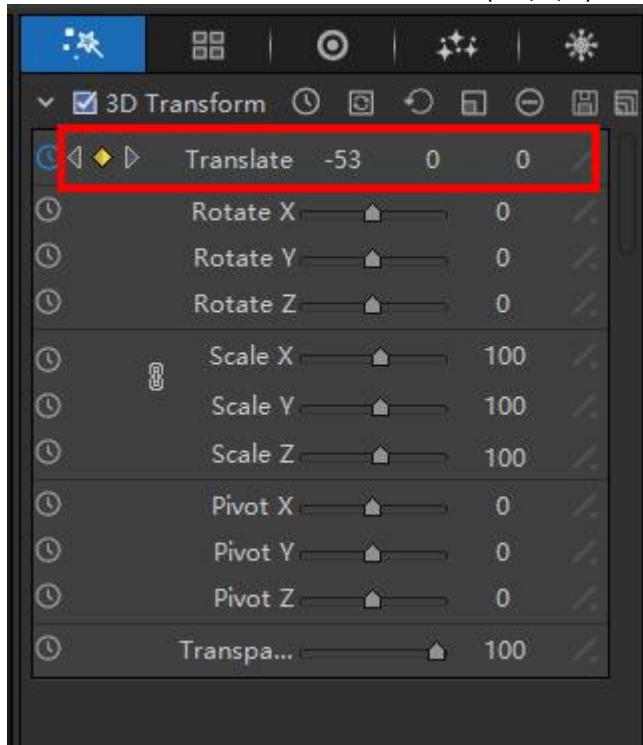

Click the “Toggle Animation” button of Velocity Over Life. Set the Head Keyframe value as 100 and the Tail Keyframe value as 0.

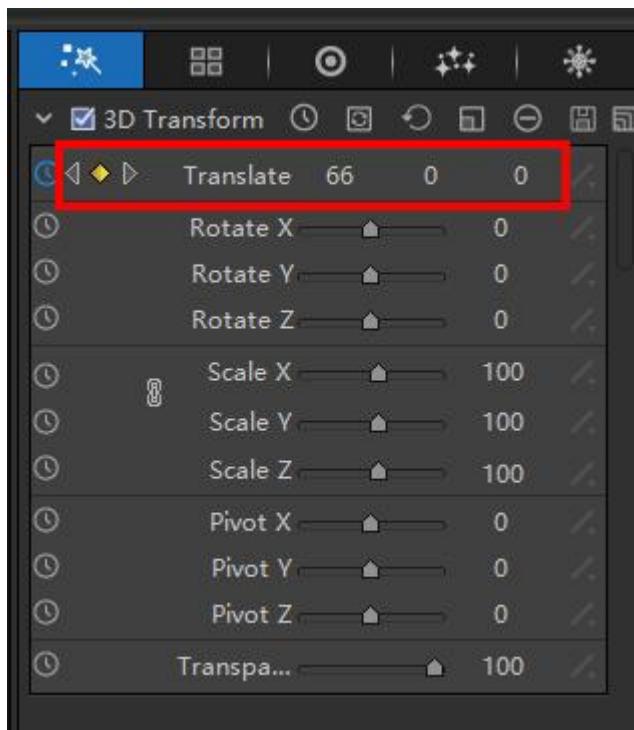

#### 6. Set 3D Transform Parameters

Move timeline to 0 second position, Click on the “Toggle Animation” button of Translate.

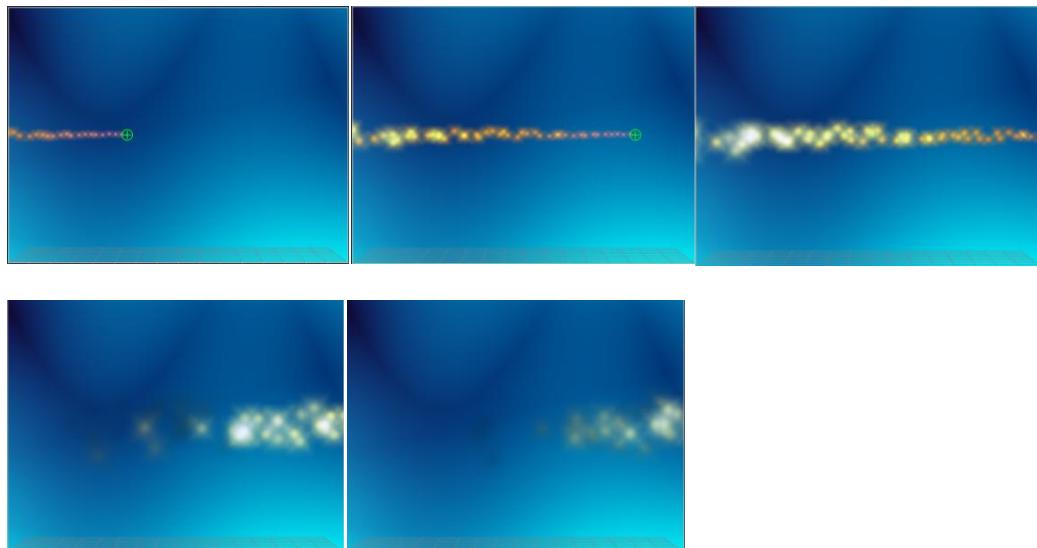

In 3D Transform tab set Translate value as (-53, 0, 0).

Move timeline to 1 second position, in 3D Transform tab set Translate parameter shown below.

7. Preview

## 11.12. 3D Plugin

### ◆ Operation Flow of 3D Plugin

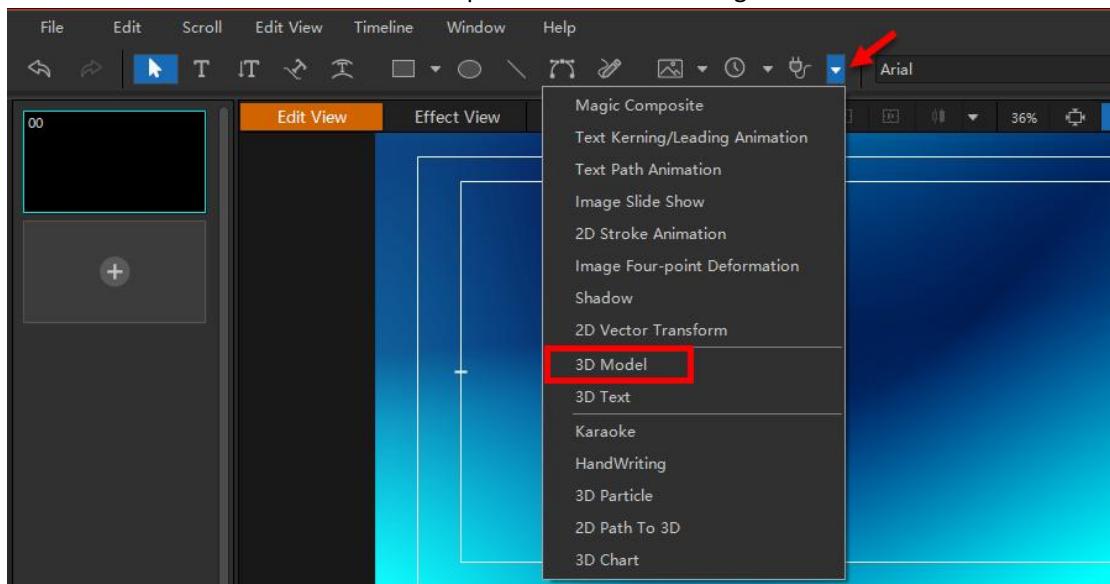

Operation of 3D model, 3D text, and 2D Path to 3D plugins are generally the same, which will be introduced in the same chapter.

### 11.12.1. Operation Differences of Three Plugins

Operation differences of these three plug-ins are as follows.

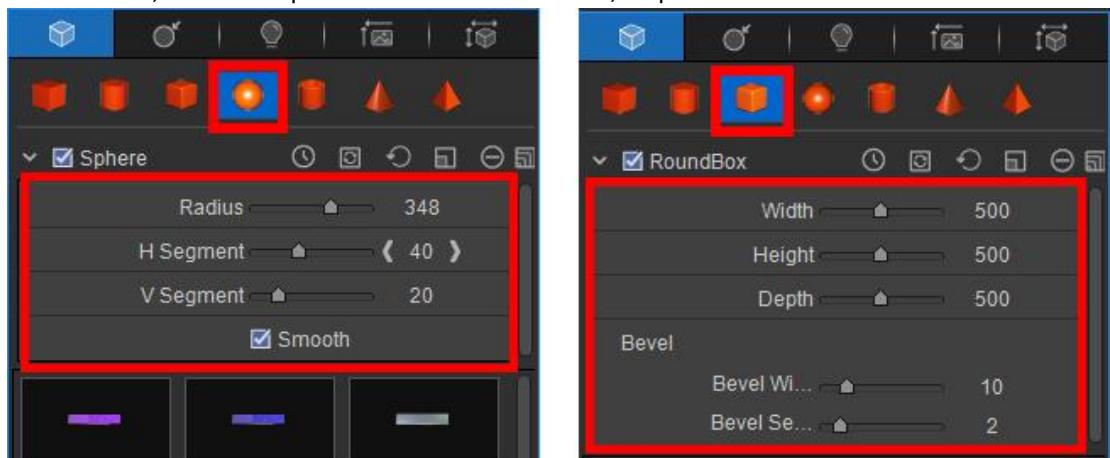

### ◆ 3D Model

Choose “3D Model” button from the drop-down list of “Title Plugin”.

### ◆ Set Model Properties

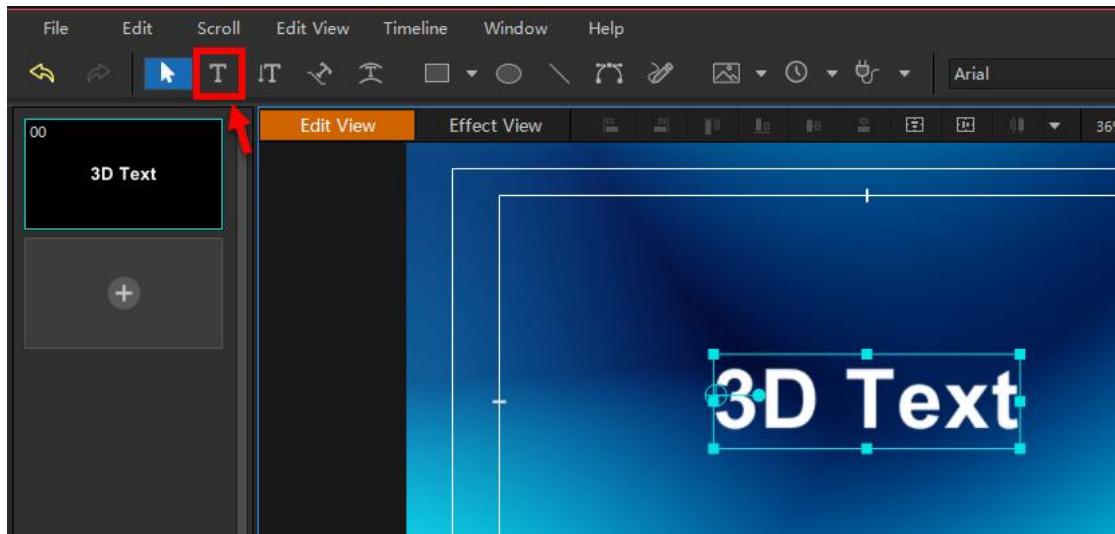

In Model tab, click the “Sphere” or RoundBox button ,set parameters as needed.

### ◆ 3D Text

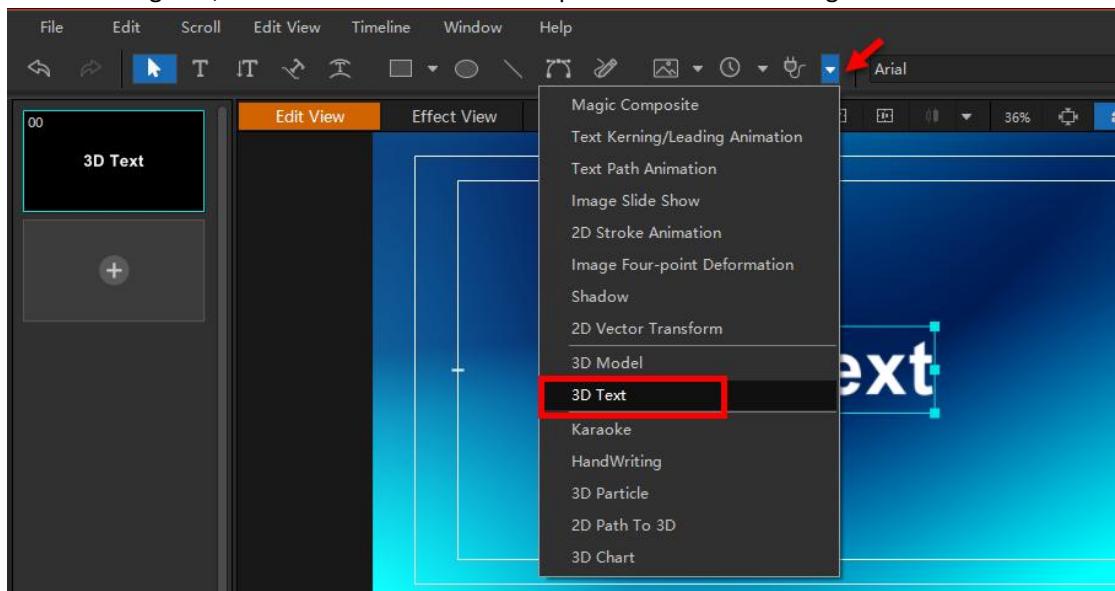

#### 1. Create Text Object

Click the “Horizontal Text” button to create a text object in Edit Screen.

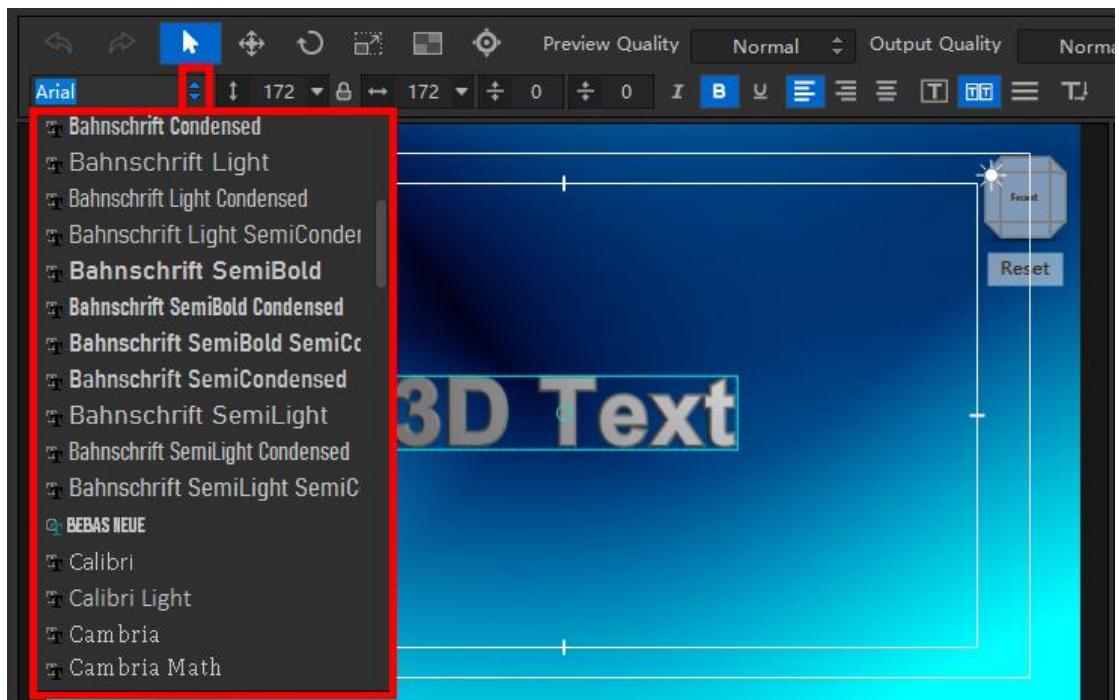

## 2. Run 3D Text Plugin

After creating text, select "3D Text" from the drop-down list of "Title Plugin" in tool bar.

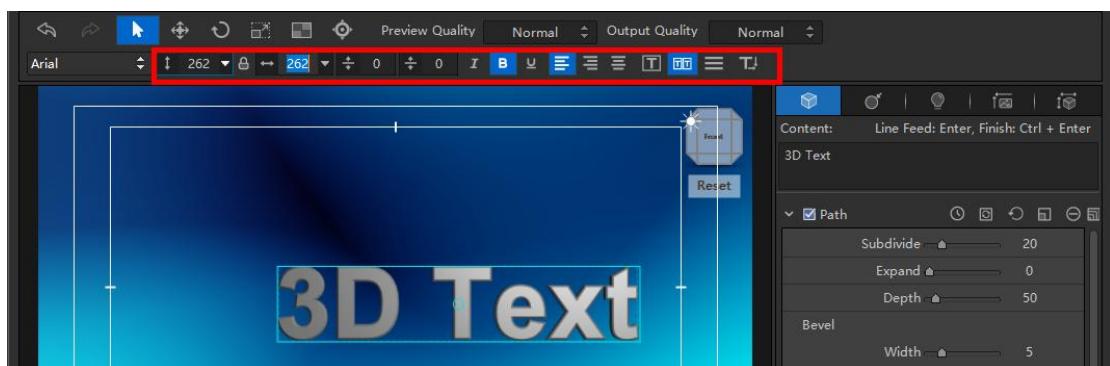

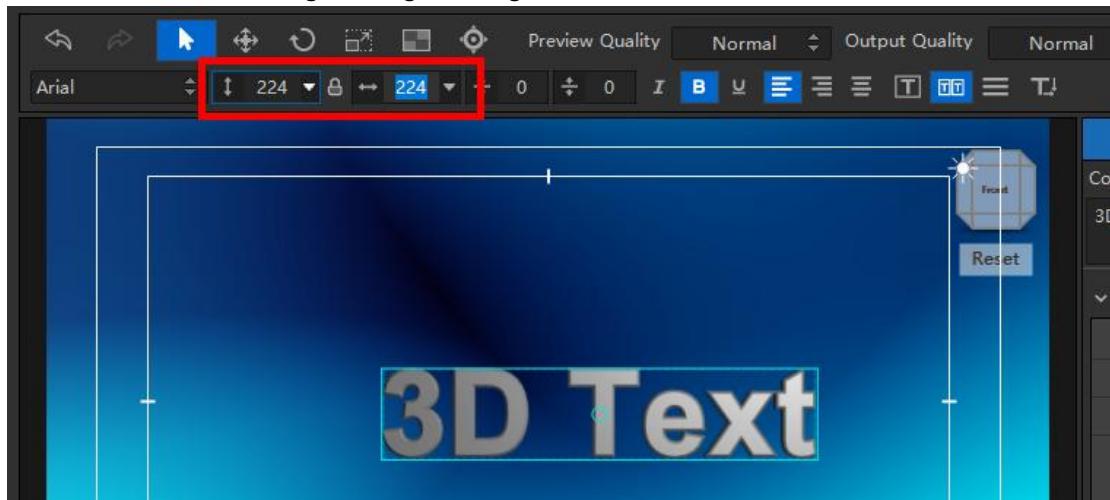

## 3、Set Font Properties Parameters

In Font Bar choose a font as shown below.

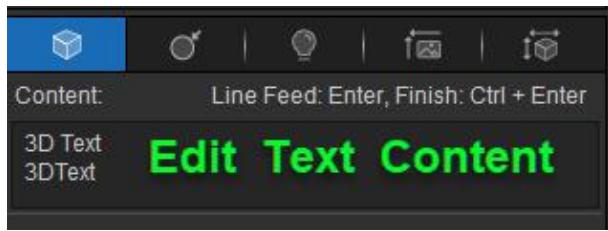

You can set font size through setting text height and width shown below.

Please refer to relevant chapters about methods of setting parameter.

#### 4、 Set Model Properties

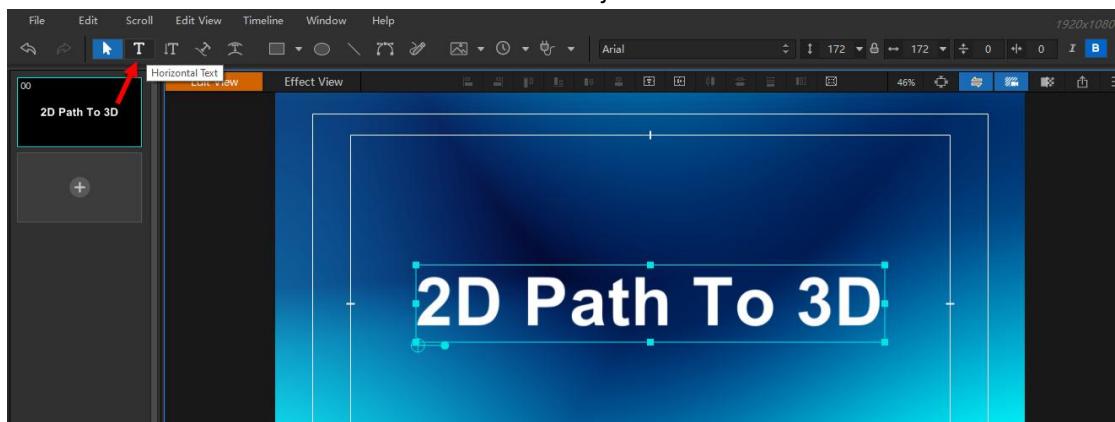

In content screen you can change text content. Press **Enter** to line feed and **Ctrl+Enter** to finish editing.

### ◆ 2D Path To 3D

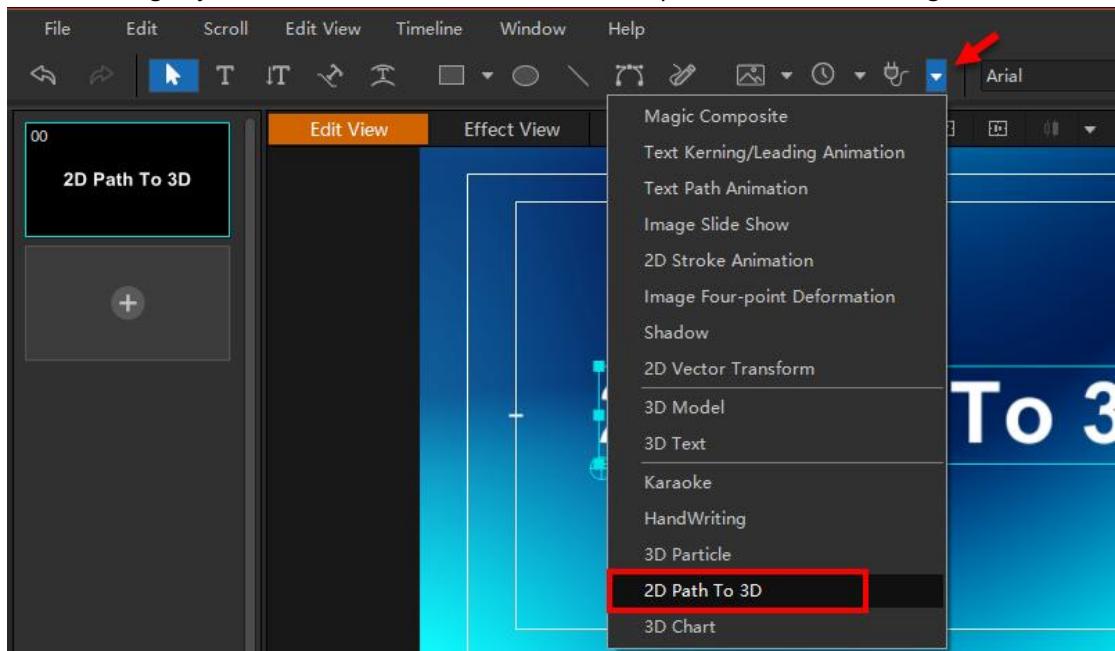

1. Create Object (taking text object as example)

Click the “Horizontal Text” button to create a text object in Edit Screen.

2. Run 2D Path To 3D Plugin

After creating object, select “2D Path To 3D” from the drop-down list of “Title Plugin” in tool bar.

## 11.12.2. Same Operation of Three Plugins

Other operations of the three plug-ins are basically the same. The material properties, lighting properties, UV coordinate properties, and three-dimensional transformation properties are introduced below.

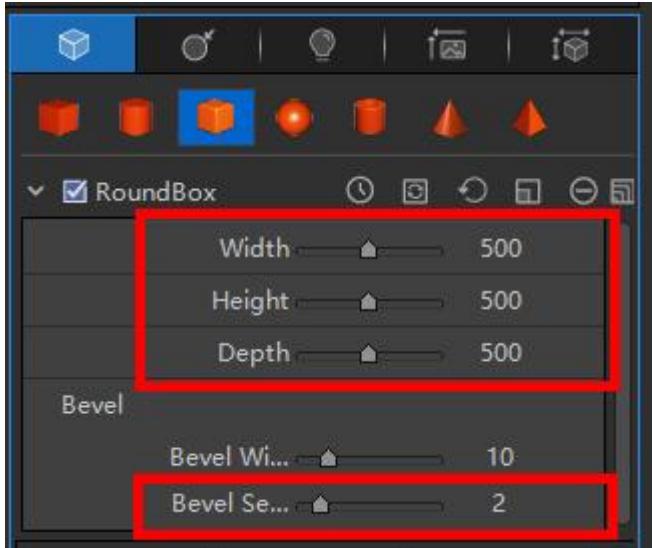

### 11.12.2.1. Material Property

The material property of object can be set in all the three plug-ins. The following uses "Phong", "Bump" and "Reflect" material as examples to introduce how to apply the materials.

#### ◆ Phong Material

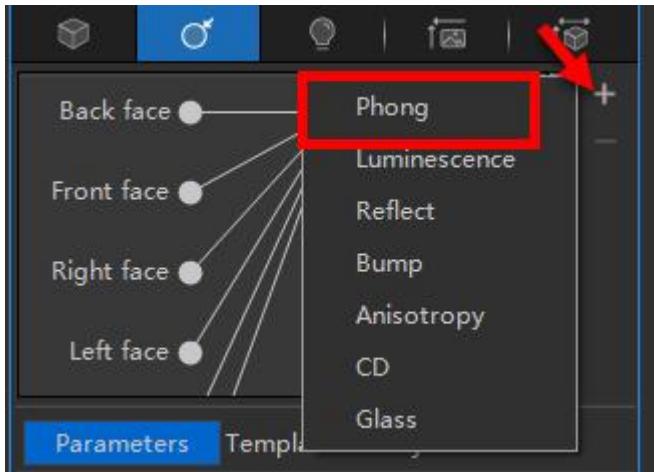

##### 1) Set Model Properties

In Model tab, click the "Round Box" button and set width, height and depth as 500 and Bevel Segment value as 2.

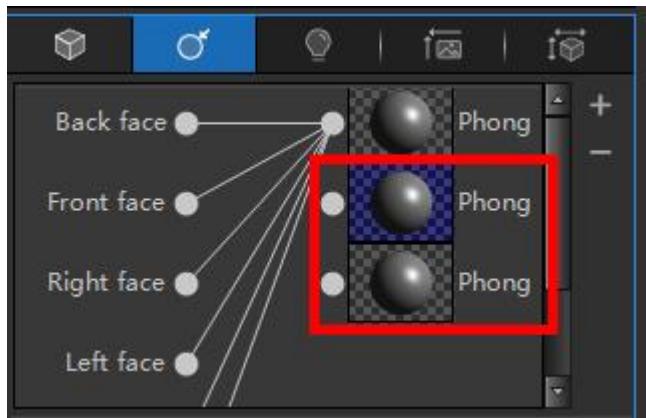

##### 2) Set Material Properties

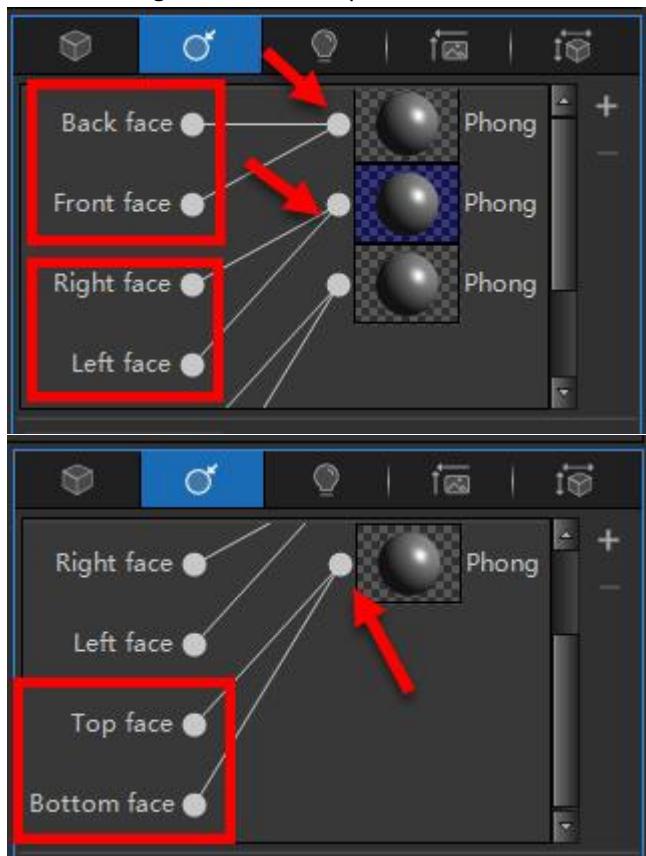

In Material tab, click the "Add" button to add Phong material.

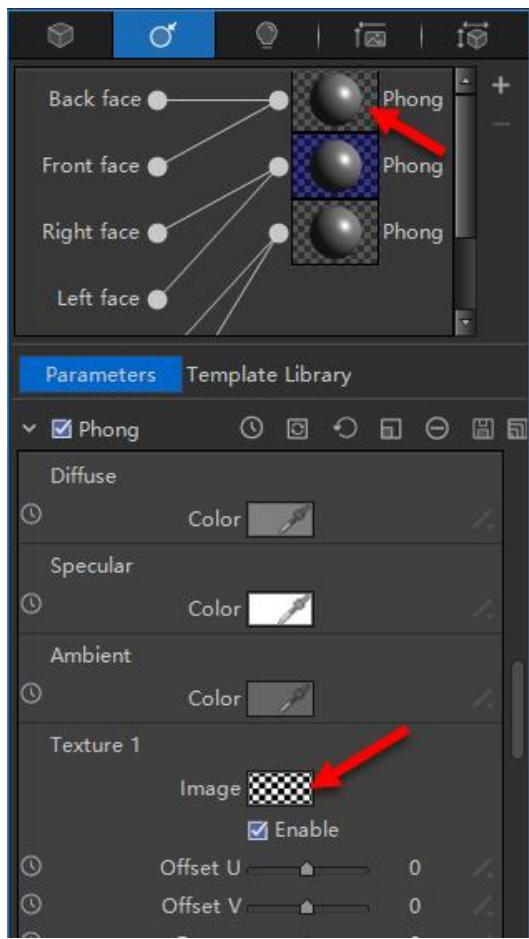

Add Phong material again.

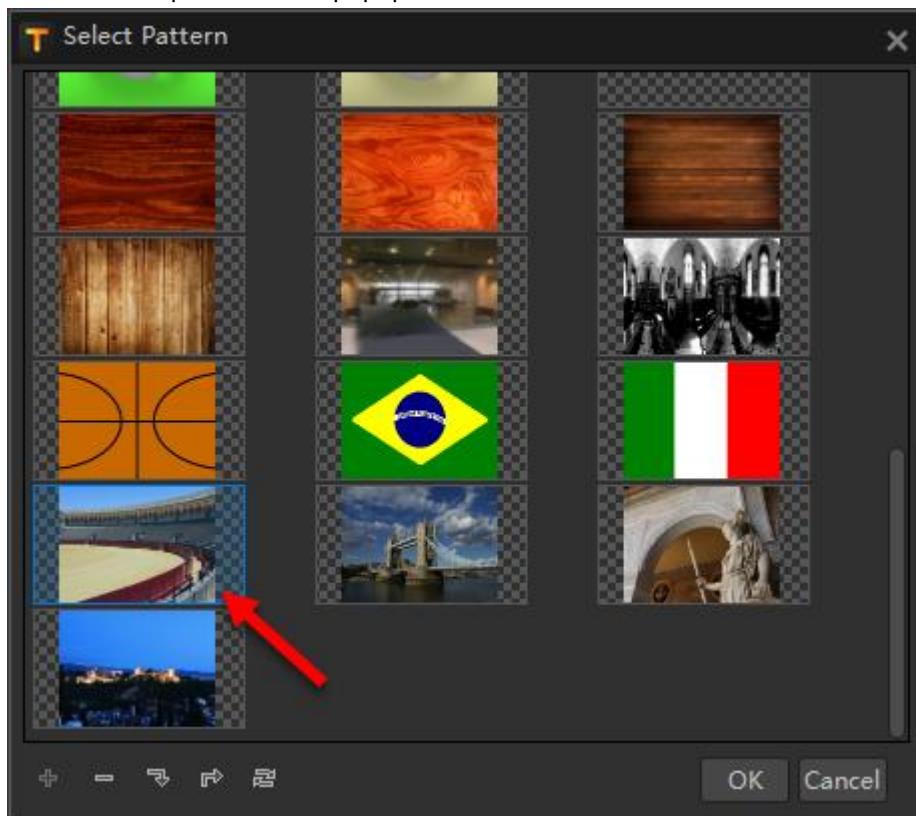

Link Back Face and Front Face with the first Phong material, Right Face and Left Face with the second Phong material and Top Face and Bottom Face with the third Phong material.

Select the first Phong material and in Parameters screen click the "Texture-Image" button.

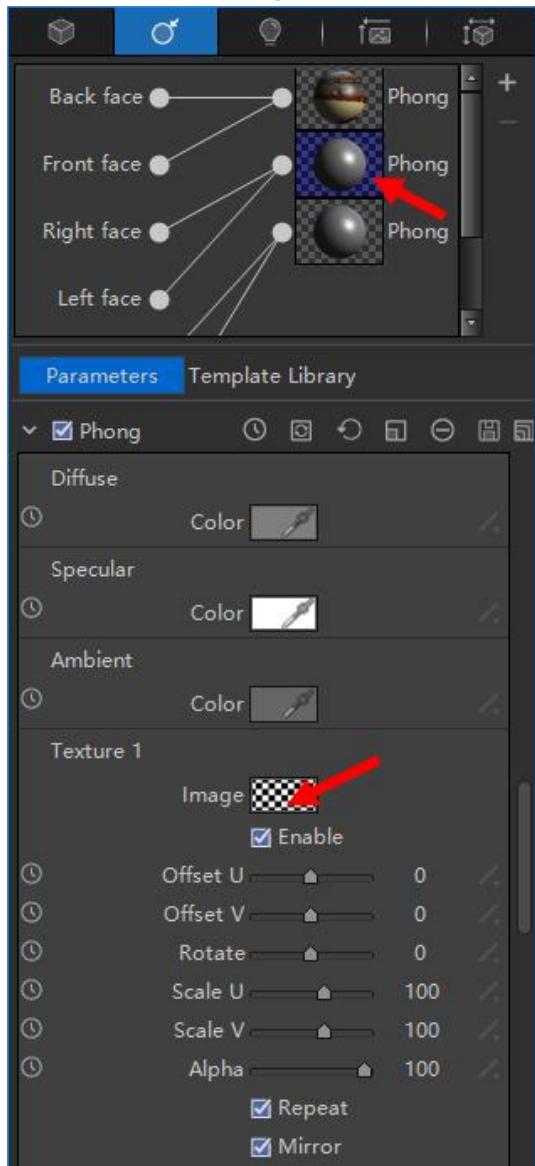

Double click a pattern in the popup Select Pattern Window.

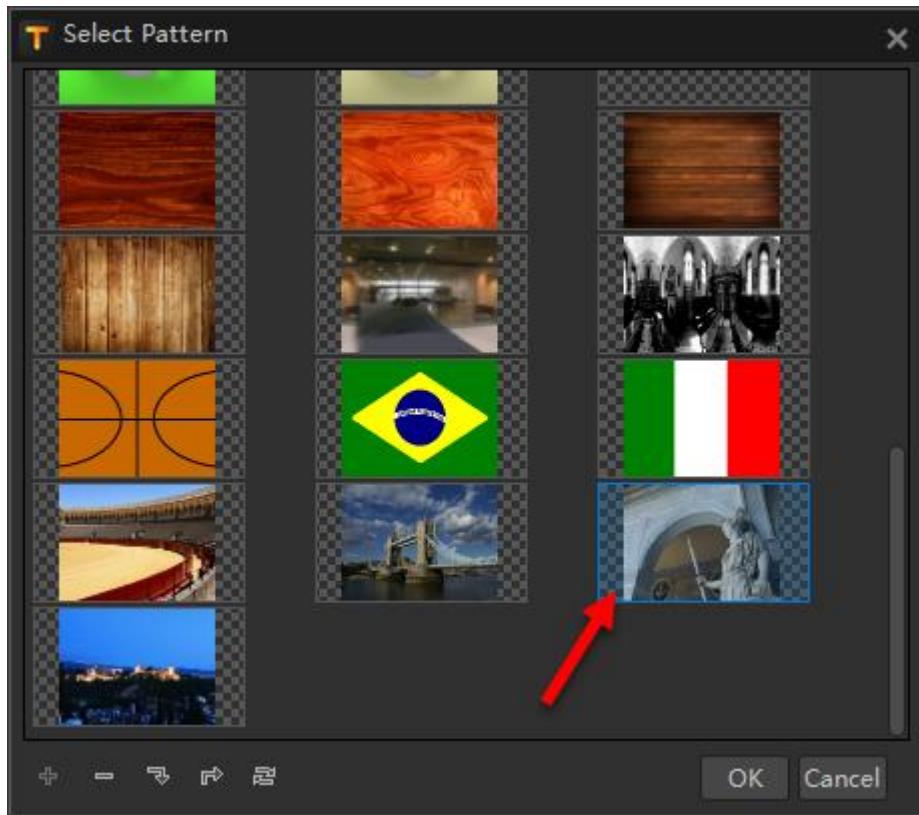

Set other parameters as the default.

Select the second Phong material and in Parameters screen click the “Texture-Image” button.

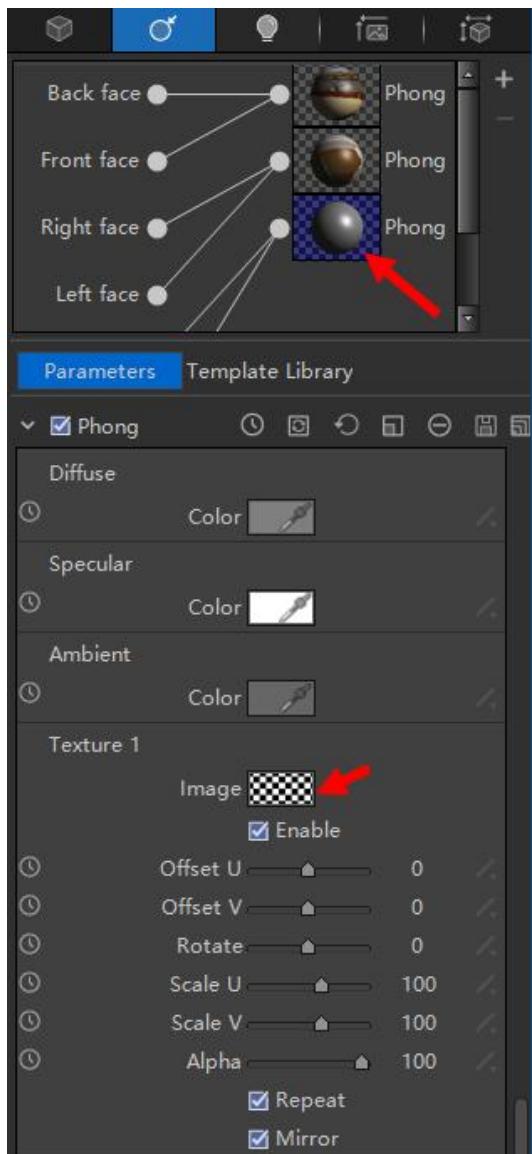

Double click a pattern in the popup Select Pattern Window.

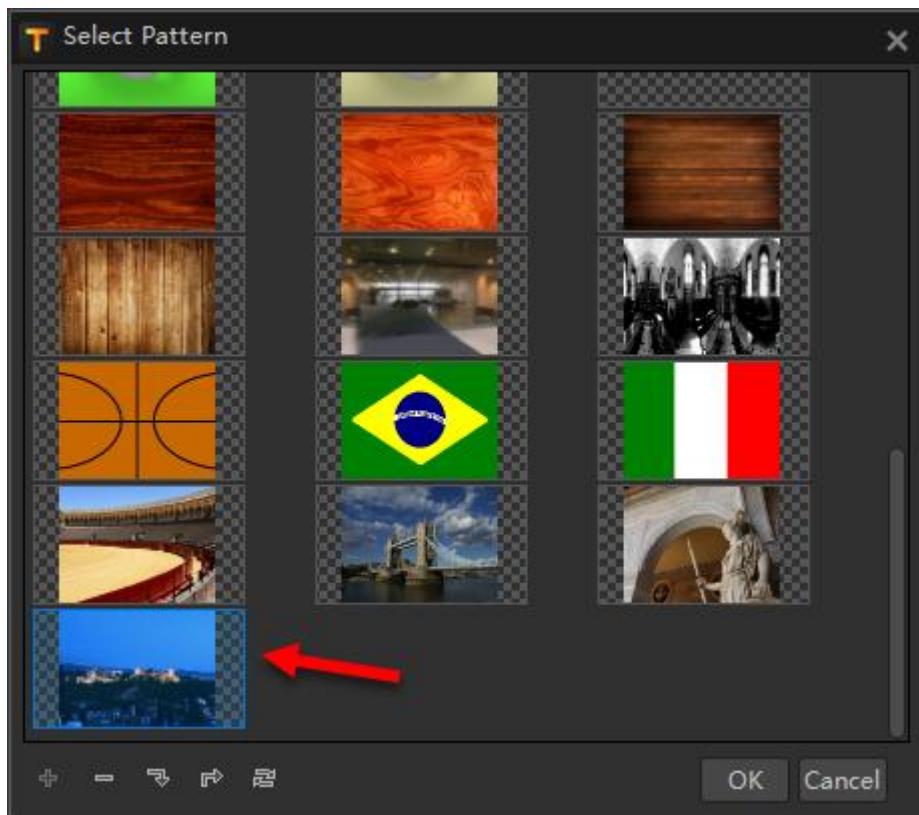

Set other parameters as the default.

Select the third Phong material and in Parameters screen click the “Texture-Image” button.

Double click a pattern in the popup Select Pattern Window.

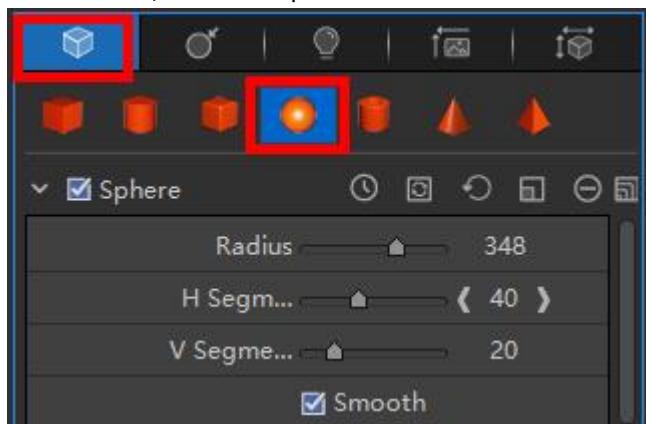

Set other parameters as the default.

◆ **Bump Material**

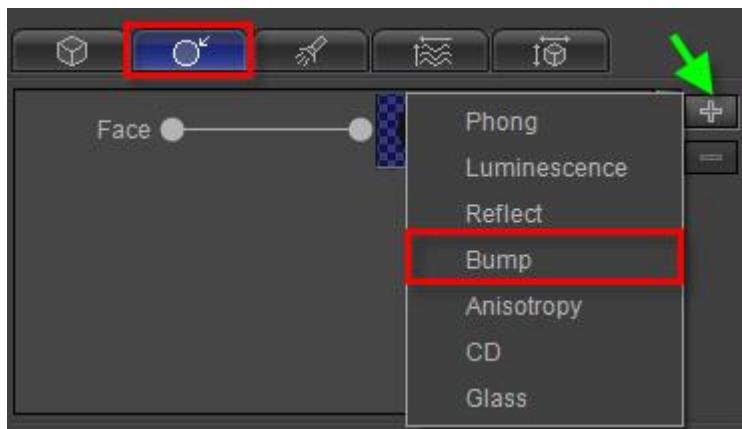

1) Set Model Properties

In Model tab, click the “Sphere” button and set radius as 348.

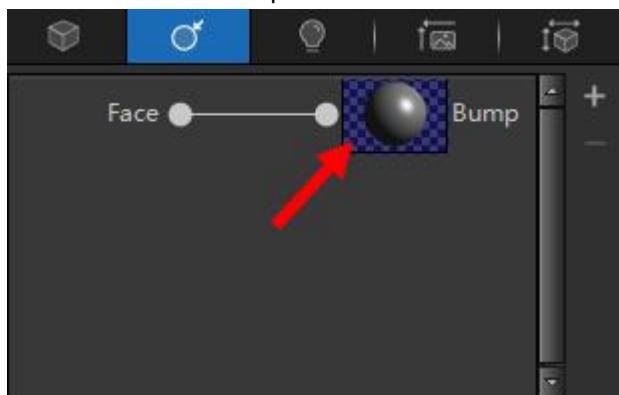

2) Set Material Properties

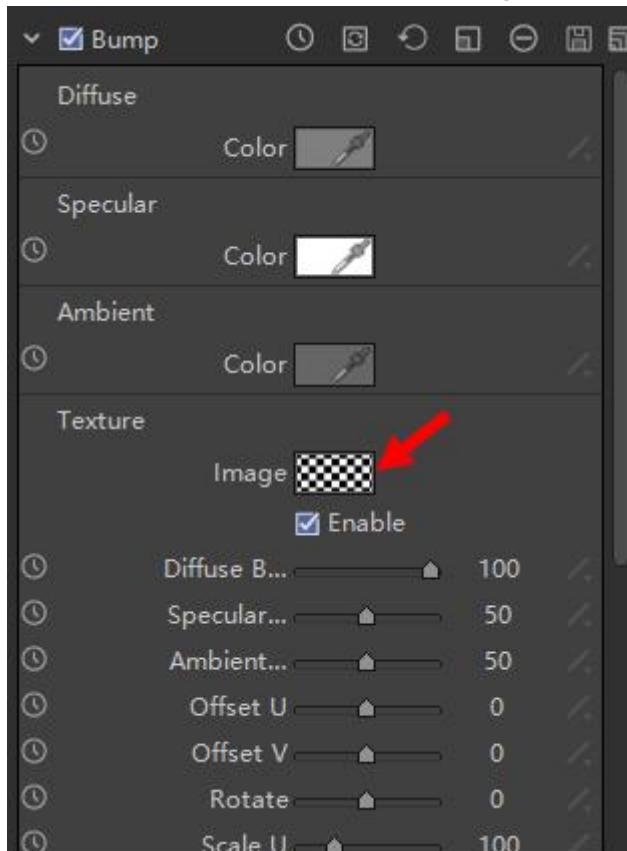

In Material tab, click the “Add” button to add Bump material.

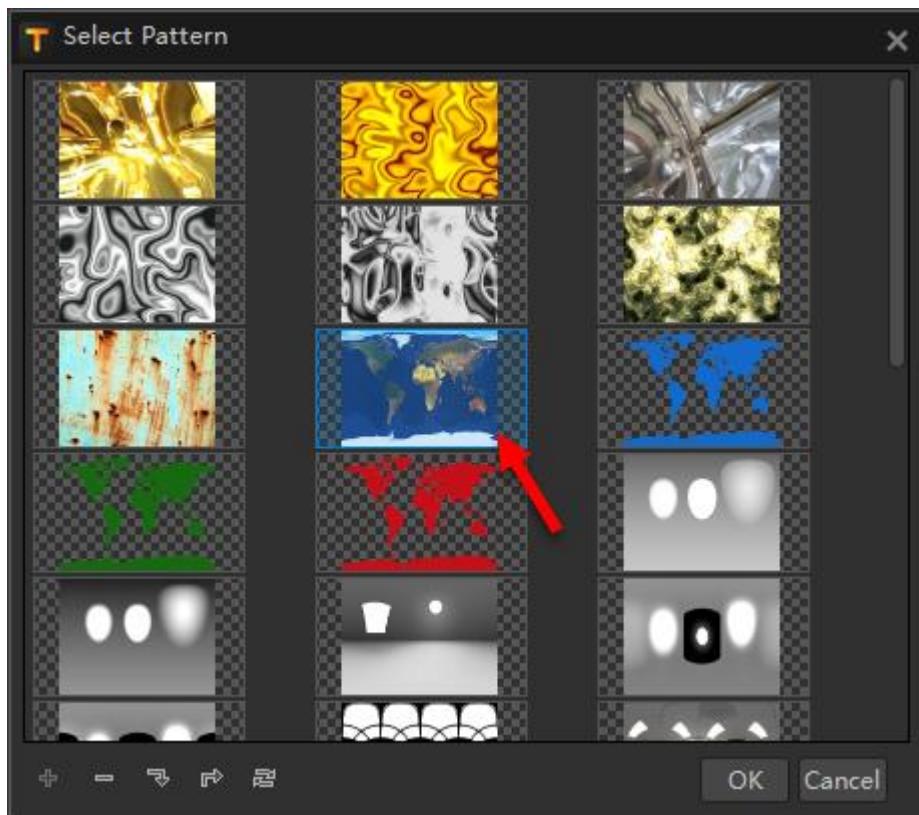

Link Face with the Bump material to set Face material as Bump and delete the Phong material.

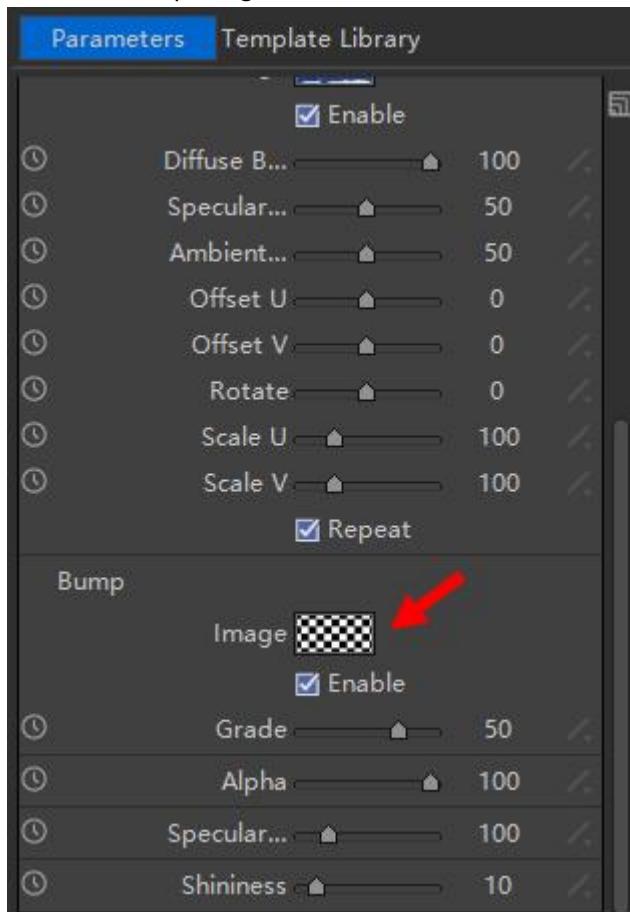

In Parameters screen click the "Texture-Image" button.

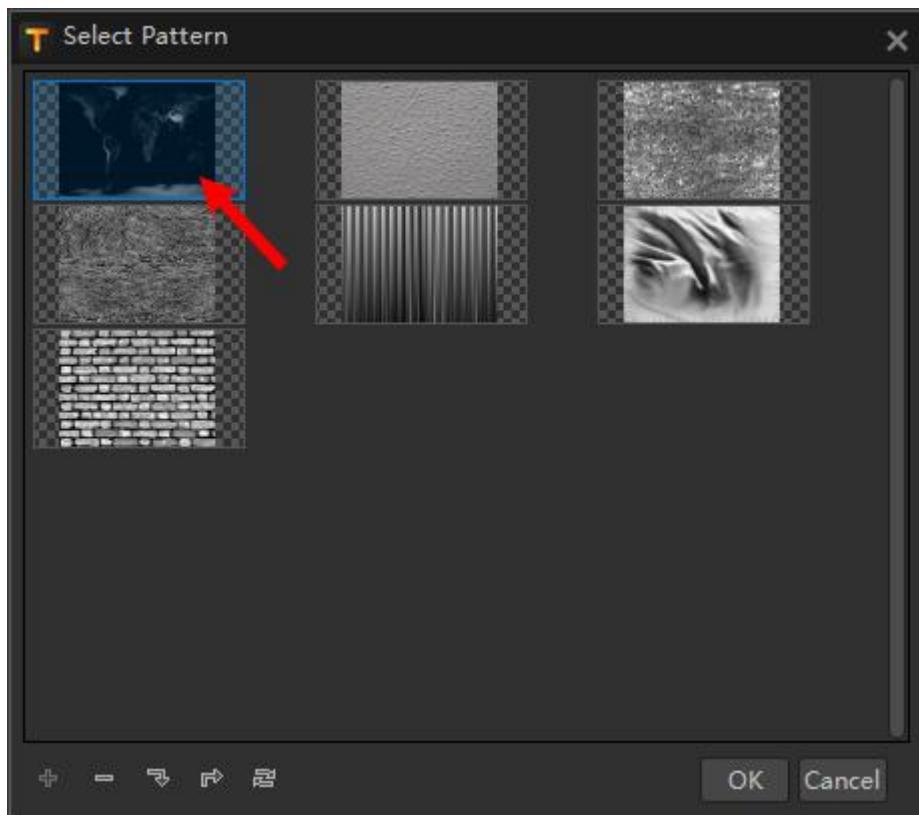

Double click a pattern in the popup Select Pattern Window.

Click the “Bump-Image” button.

Double click a pattern in the popup Select Pattern Window.

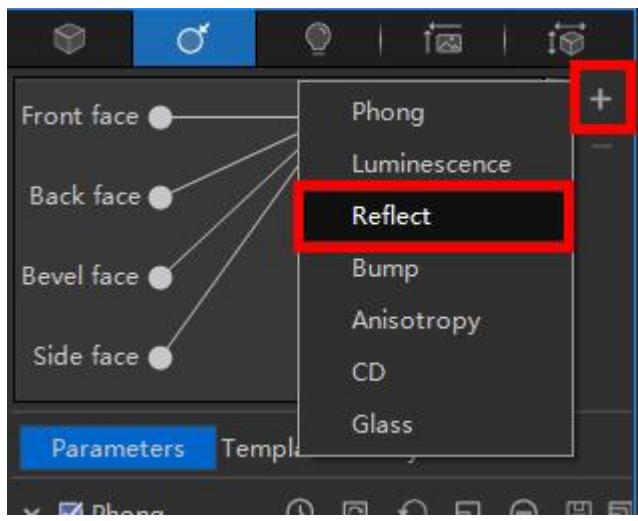

Set other parameters as the default.

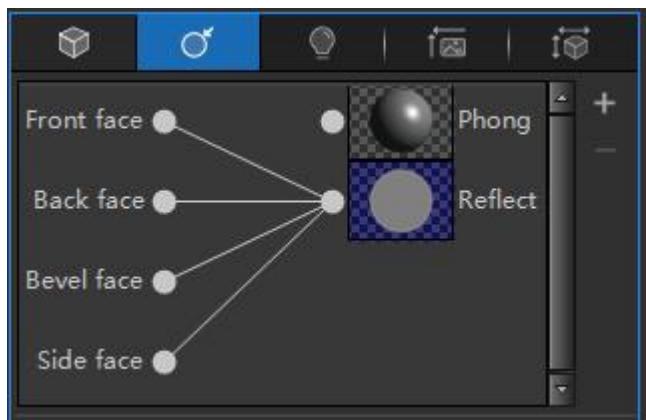

#### ◆ Reflect Material

##### 1. Set Material Properties

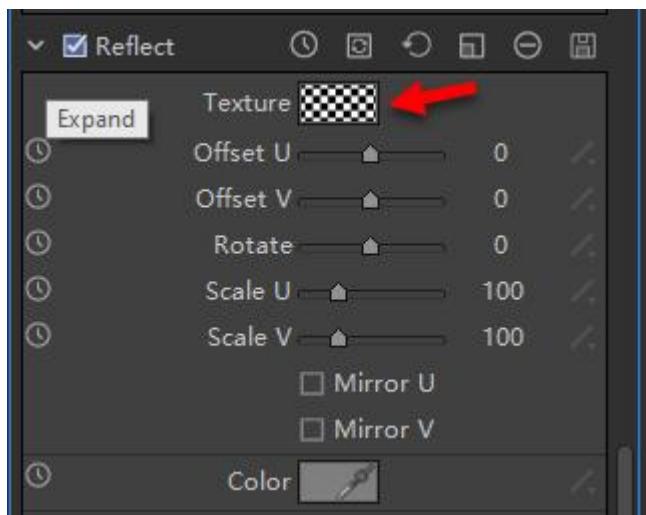

In Material tab add a Reflect material.

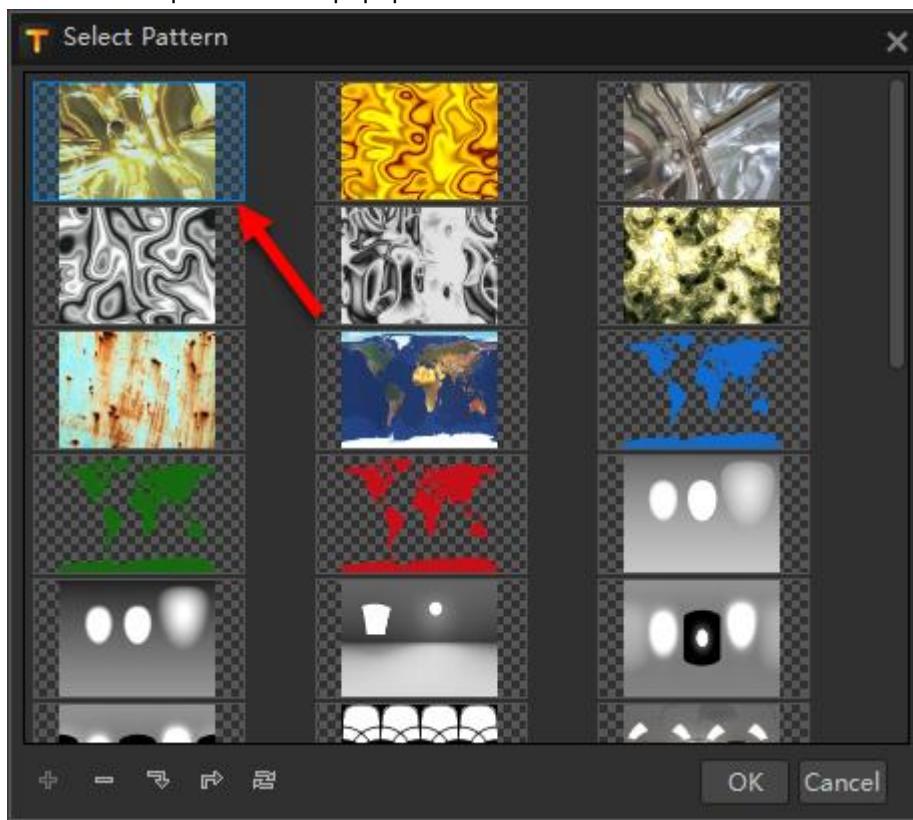

Set all faces material type as Reflect.

In Parameters screen click the “Texture” button.

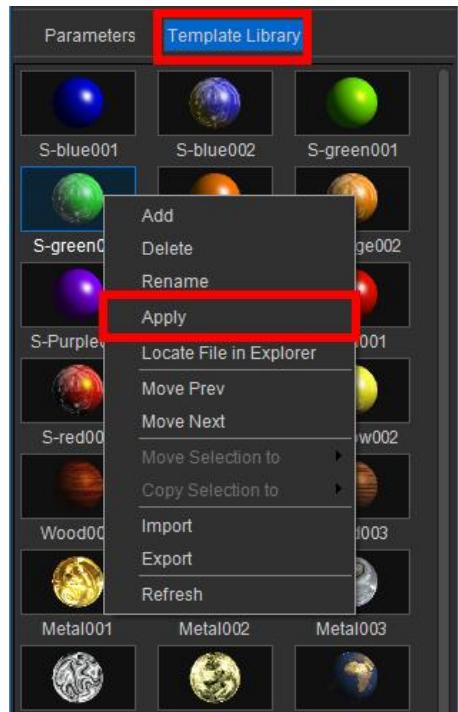

Double click a pattern in the popup Select Pattern Window.

◆ **Template Library**

Double-click template or choose “Apply” in right-click menu to in material template library to apply material properties of the template.

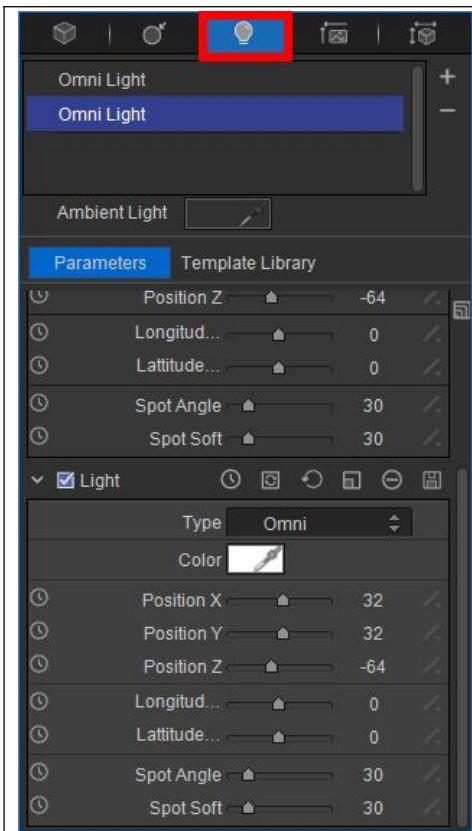

### 11.12.2.2. Light

Settings of light property in the three plugins are the same. Introduction of light property is as follows.

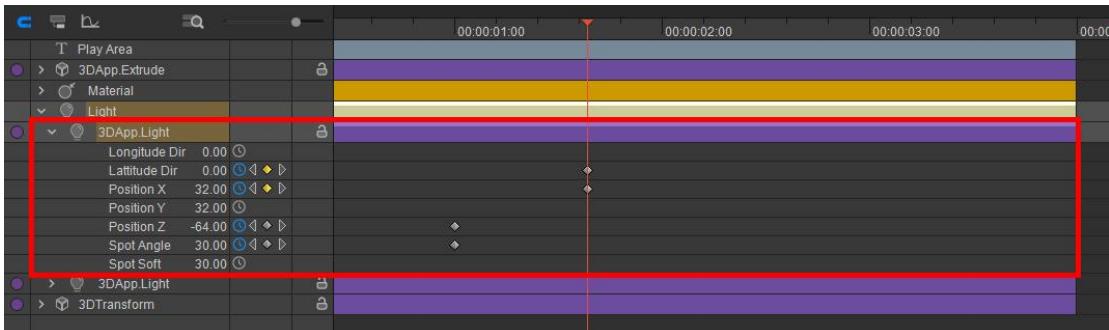

In Properties Window click on the “Light” button to open the Light tab. Please refer to other chapters about setting parameters.

#### ◆ Light Tab Introduction

**Add:** add light  
**Delete:** delete light  
**Ambient Light:** set ambient light color.  
**Template Library:** open Template Library  
**Parameters:** open Parameters screen  
**Type:** select light type  
**Color:** set light color  
**Position X:** set light X position  
**Position Y:** set light Y position  
**Position Z:** set light Z position  
**Longitude dir:** set light Longitude direction  
**Latitude dir:** set light Latitude direction  
**Spot Angle:** set spot angle  
**Spot Soft:** set spot soft

#### Set Light Keyframe in Timeline Window

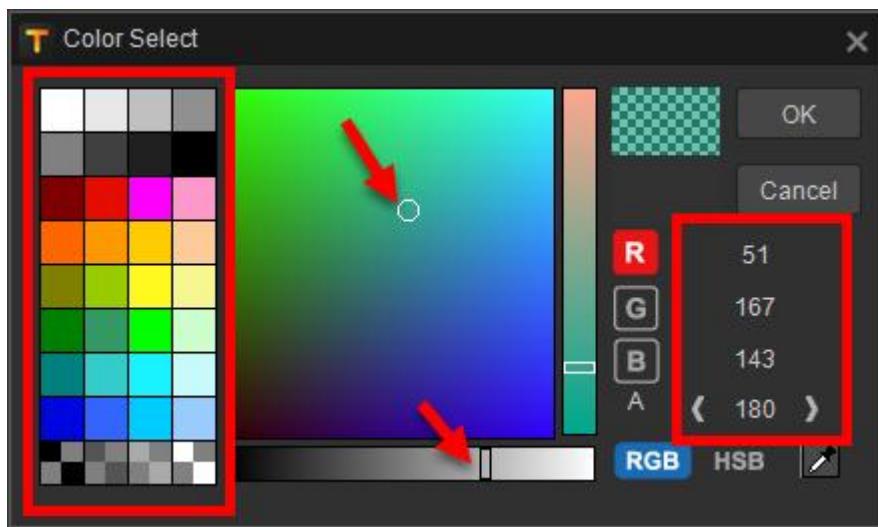

#### Add/Delete Light

Click the “Add” button and choose a light type to add. Click on the light in light list and click the “Delete” button to delete.

#### Set Ambient Light Color

Click the button right of Ambient Light, Color Select Window will appear.

The "Color" section has 32 preset colors. To set color:

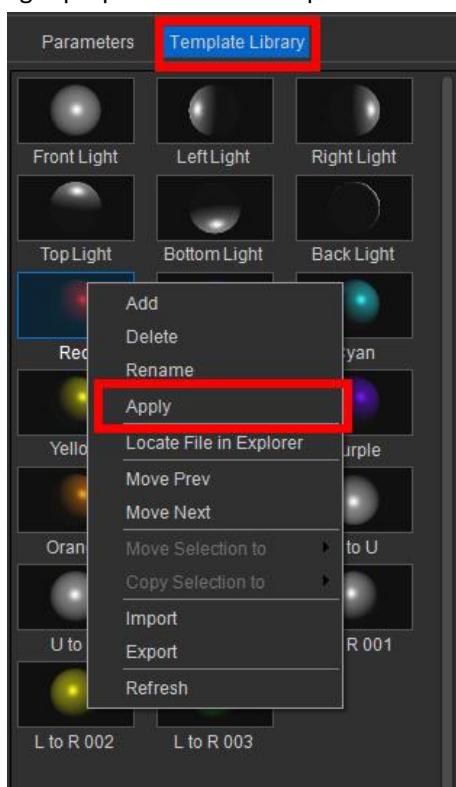

1. Choose one of the 32 preset colors
2. Use the cursor to pick a color from the palette
3. Set parameters in the RGB Alpha fields
4. Use the scroll bar to set alpha

### Color

Please refer to the Set Ambient Light Color.

#### ◆ Template Library

Double-click template or choose “Apply” in right-click menu to in light template library to apply light properties of the template.

### 11.12.2.3. UV Coordinates

The operation of setting UV coordinates in the three plugins is the same. Switch to the UV properties tab and set the parameters as needed. See the table below for the meaning of each parameter.

Texture UV Coordinate Settings	
<input checked="" type="radio"/> Planar	<input type="radio"/> Custom
<input type="checkbox"/> Mirror U	
<input type="checkbox"/> Mirror V	
Translate X	0
Translate Y	0
Translate Z	0
Rotate X	0
Rotate Y	0
Rotate Z	0
Scale U	100
Scale V	100

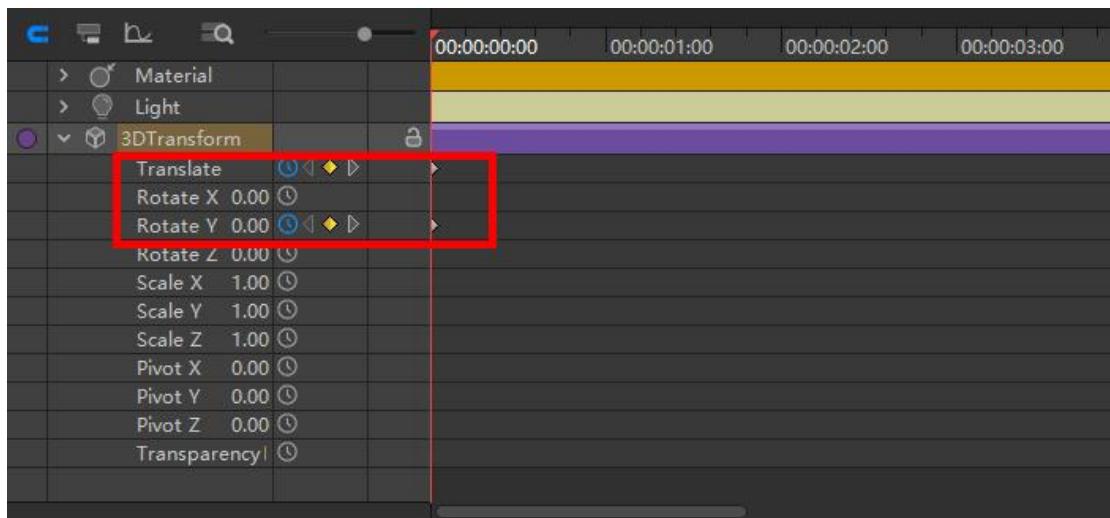

**Planar:** enable “Planar”, texture will be planar.  
**Custom:** enable “Custom”, texture will be custom texture.  
**Mirror U:** after enabling “Planar” enable “Mirror U”, texture will have mirror U.  
**Mirror V:** after enabling “Planar” enable “Mirror V”, texture will have mirror V.  
**Translate X:** set texture X position after enabling “Planar”  
**Translate Y:** set texture Y position after enabling “Planar”  
**Translate Z:** set texture Z position after enabling “Planar”  
**Rotate X:** set texture X rotation after enabling “Planar”  
**Rotate Y:** set texture Y rotation after enabling “Planar”  
**Rotate Z:** set texture Z rotation after enabling “Planar”  
**Scale U:** scale texture along U coordinate after enabling “Planar”  
**Scale V:** scale texture along V coordinate after enabling “Planar”

### 11.12.2.4. 3D Transform Property

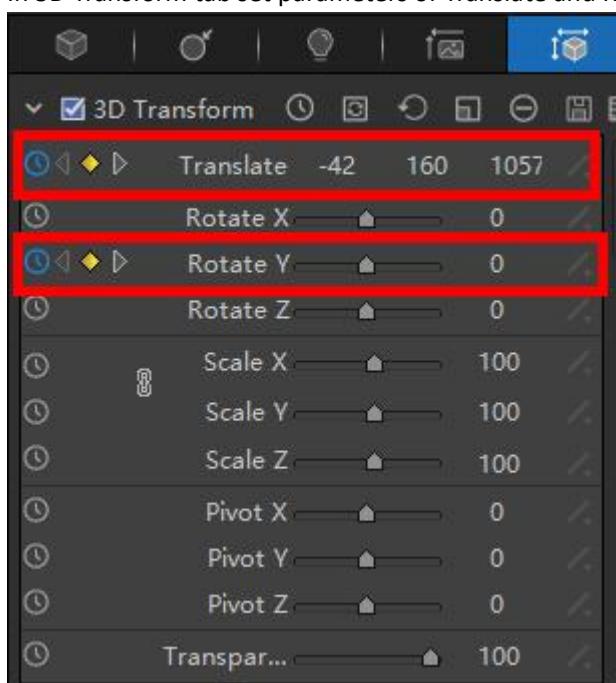

The 3D transform operations are the same in the three plug-ins. The specific setting of 3D transformation is introduced as follows.

◆ Set 3D Transform Parameters

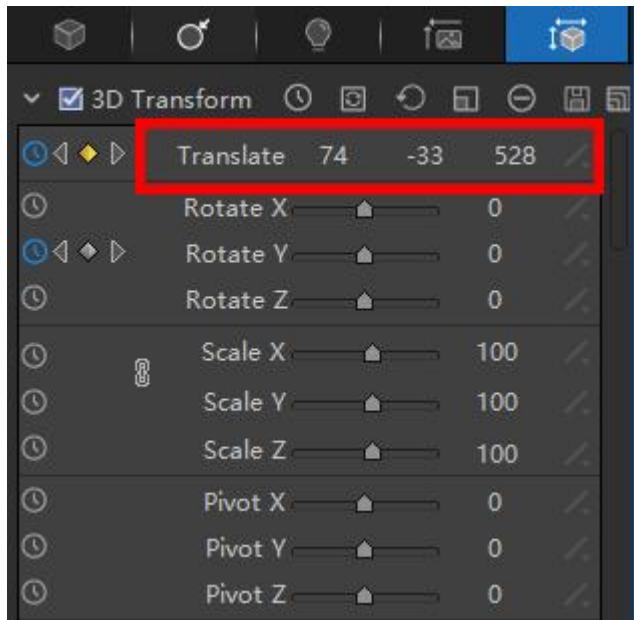

Move timeline to 0 second position, click on “Toggle Animation” buttons of Translate and Rotate Y.

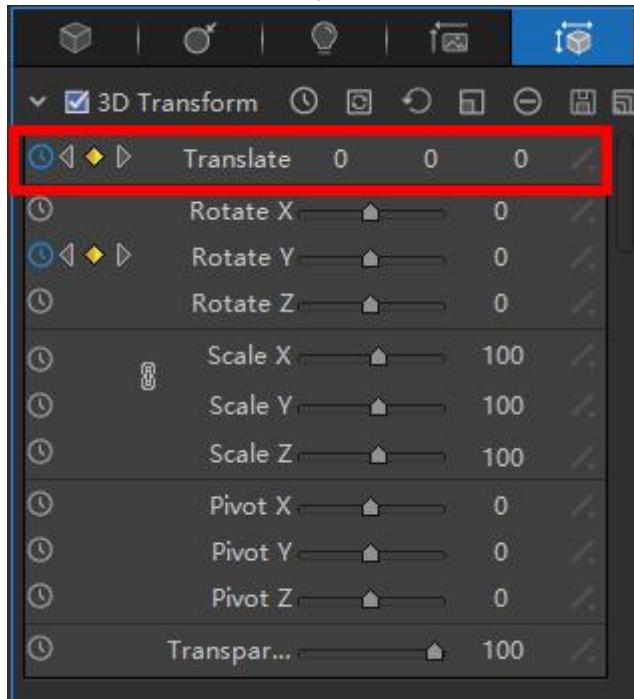

In 3D Transform tab set parameters of Translate and Rotate Y.

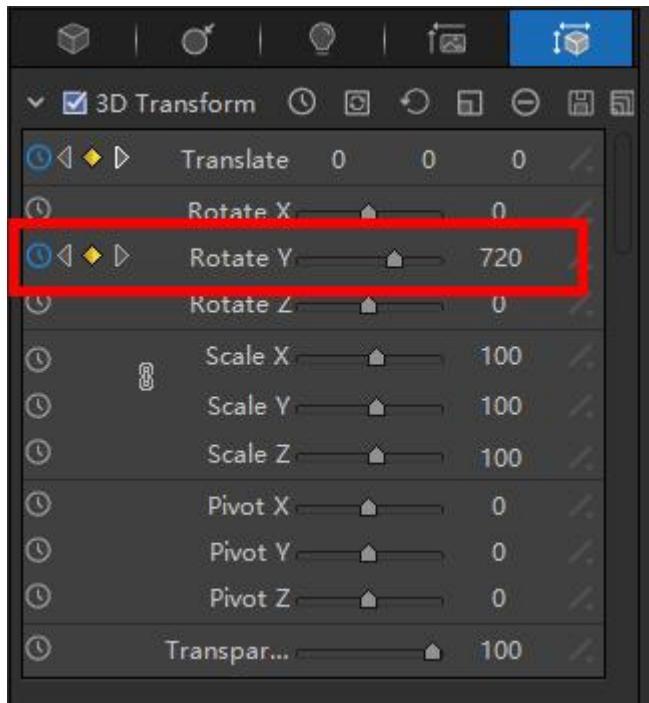

Move timeline to 1 second position, set Translate value as (74,-33,528).

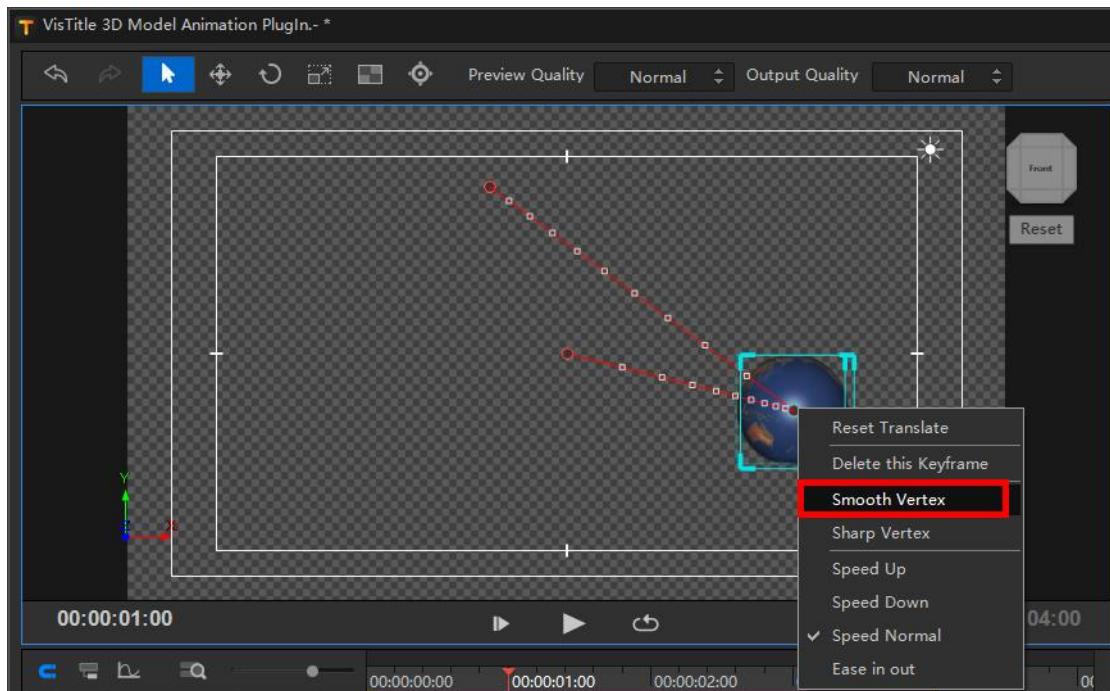

Move timeline to 2 second position, set Translate value as (0,0,0).

Move timeline to the last frame position, set Rotate Y value as 720.

In Edit Screen right click the keyframe marker of 1 second and select “Smooth Vertex” from the context menu.

### 11.12.3. Preview

- ◆ **3D Mode**

◆ 3D Text

◆ 2D Path To 3D

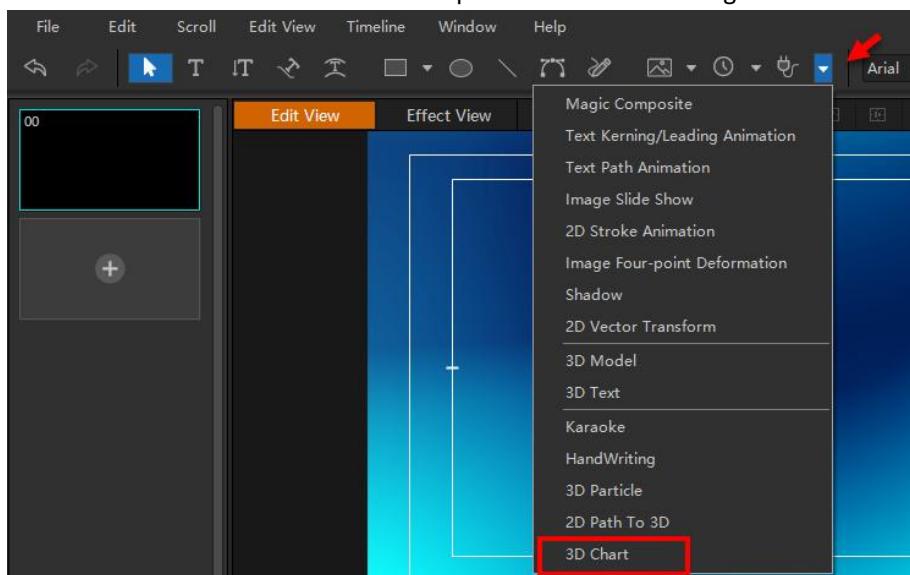

## 11.13. 3D Chart

### ◆ Operation Flow of 3D Chart

#### 11.13.1. Operation Flow of Still Pie Chart

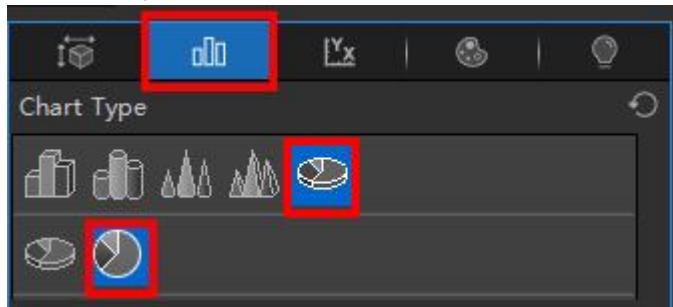

##### 1. Run 3D Chart Plugin

Choose “3D Chart” button from the drop-down list of “Title Plugin”.

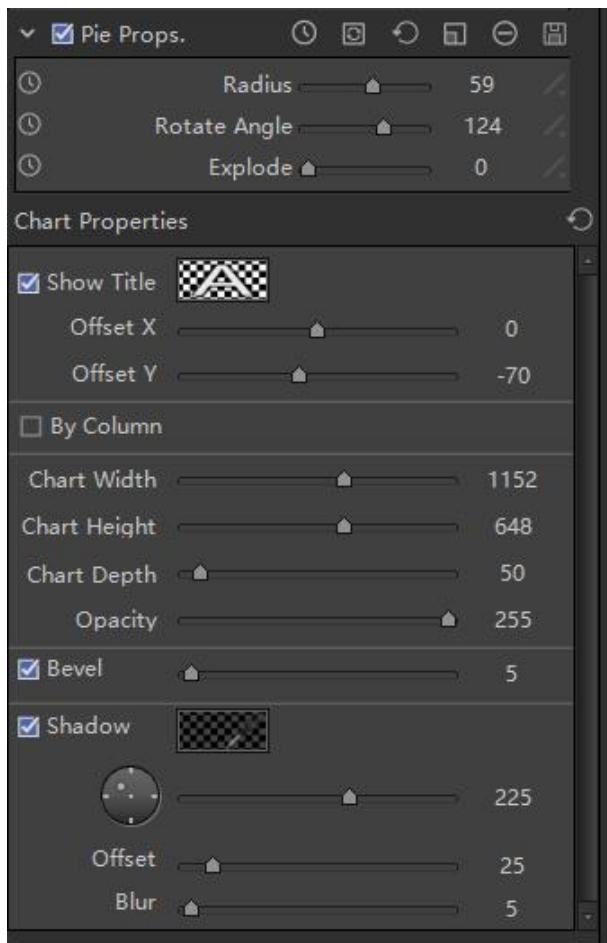

##### 2. Set Chart Properties

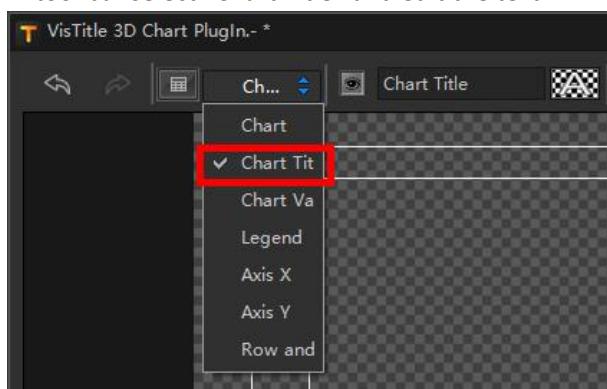

In Chart Properties tab click the “Pie” button and select “2D Pie”.

Set Pie Properties parameters and Chart Properties parameters:

In tool bar select “Chart Title” and edit the text.

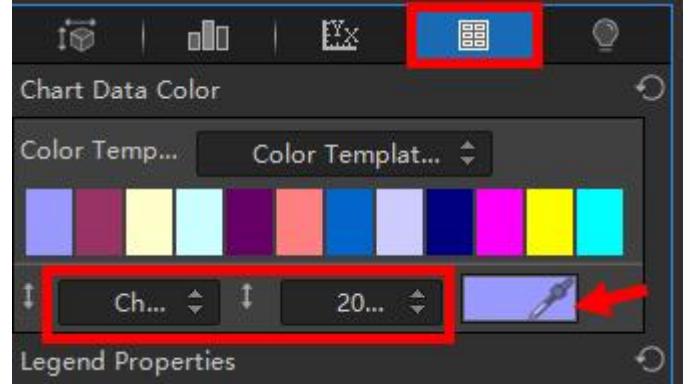

### 3. Change Chart Data

Click “F2” or the “Chart Data Editing” button and Chart Data Window will appear. Change data in the window.

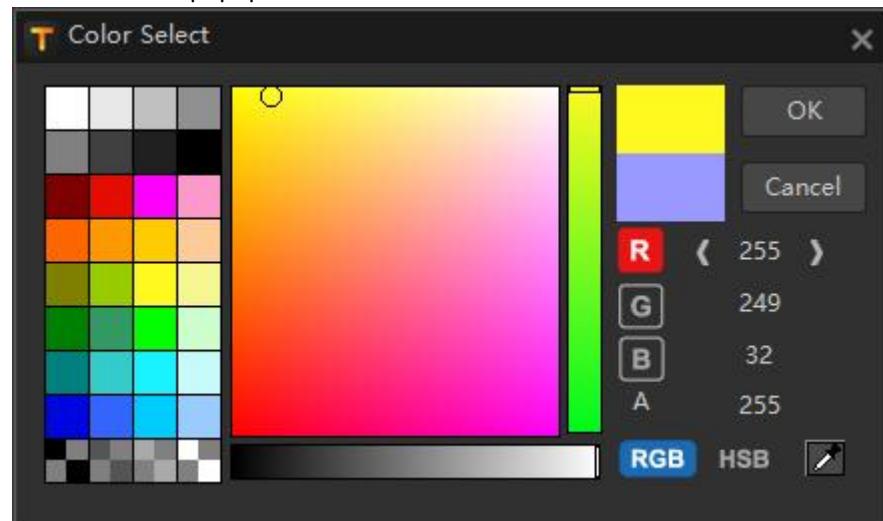

#### 4. Set Chart Miscellaneous Properties

#### Set Chart Data Color in Chart Miscellaneous Properties Tab

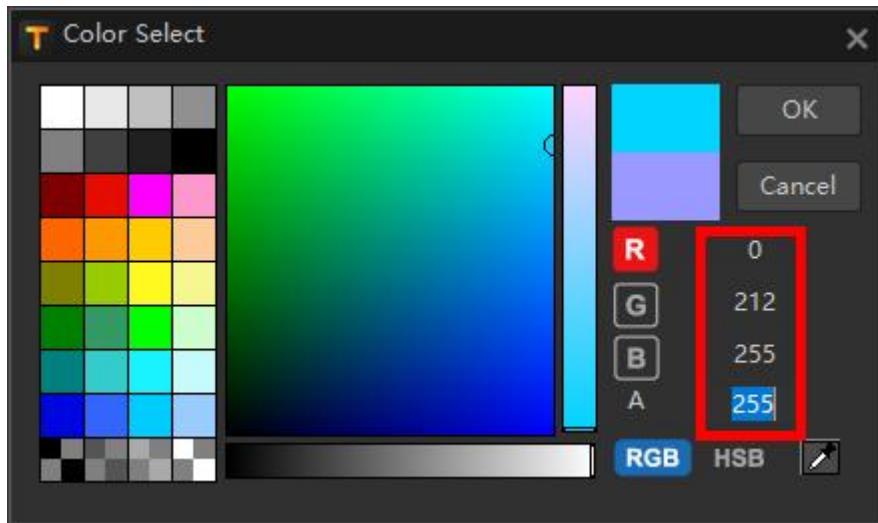

Select row China and column 2012, click the button

Set color in the popup Select Color Window.

Select row America and column 2012, click the button  . Then set color in the popup Color Select Window.

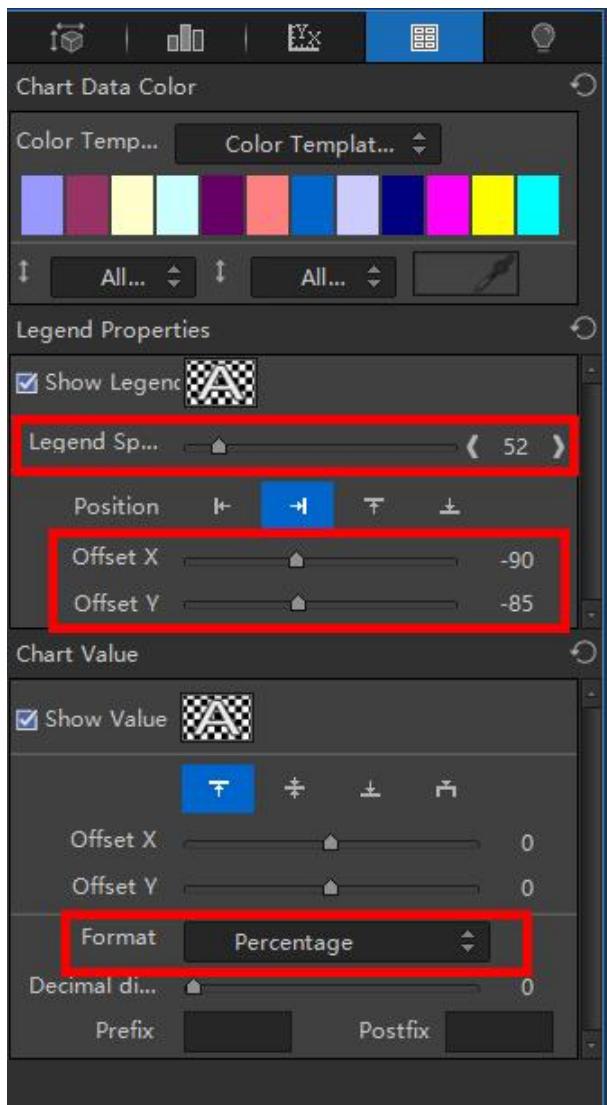

Select row Germany and column 2012, click the button . Then set color in the popup Color Select Window.

Set Legend Properties Parameters and Chart Value Parameters in Chart Miscellaneous Properties Tab

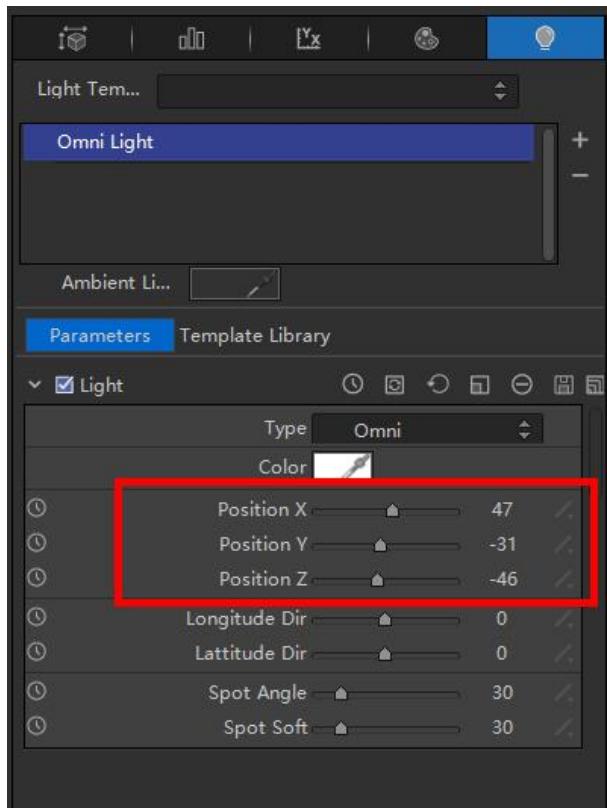

In Legend Properties screen set legend space as 52, Offset X value as -90 and Offset Y value as -85.

In Chart Value screen set Format as Percentage. And set other parameters as the default.

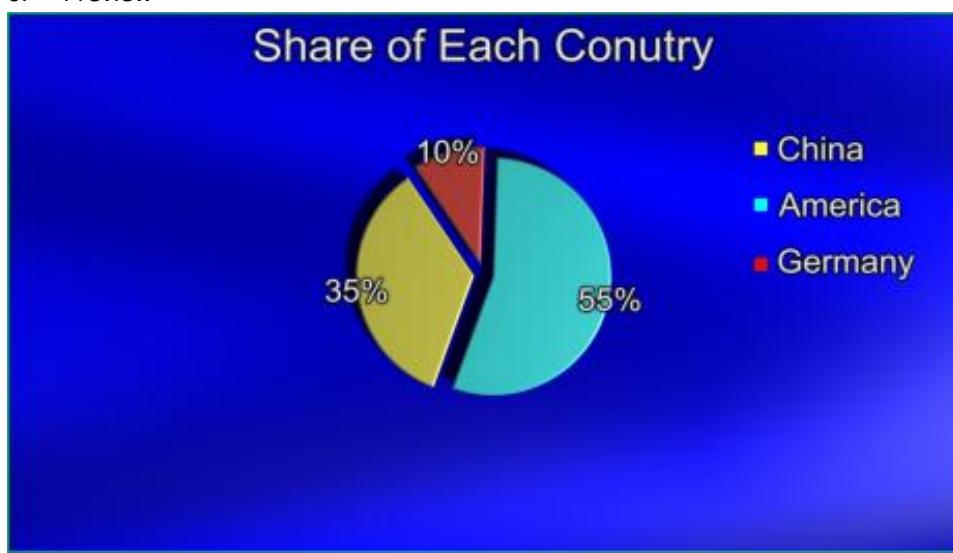

##### 5. Set Light Properties

In Light Properties tab open Parameters screen. Set Position X value as 47, Position Y value as -31 and Position Z value as -46.

6. Preview

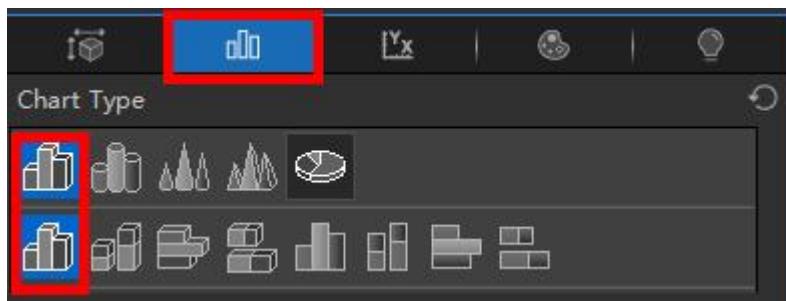

### 11.13.2. Operation Flow of Dynamic Column Chart

1. Run 3D Chart Plugin

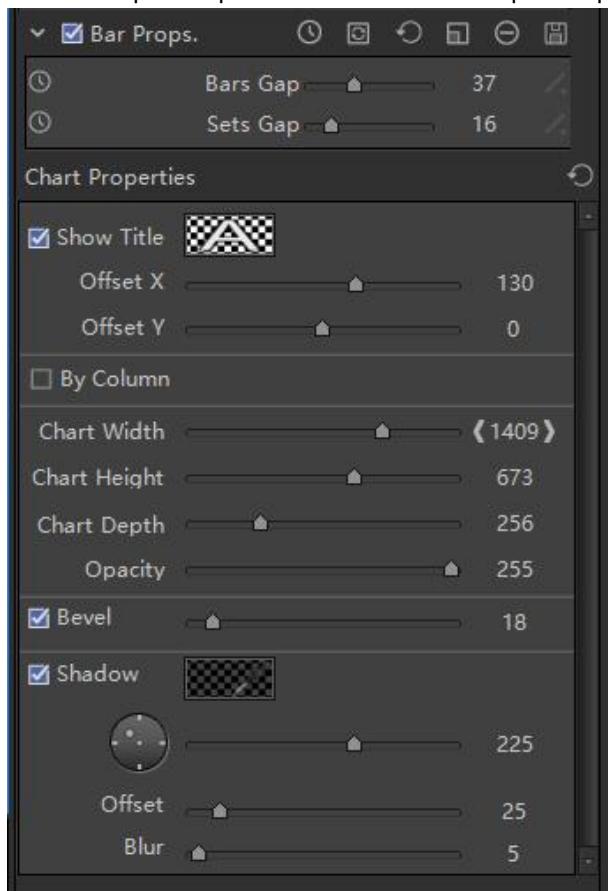

Open the 3D Chart plugin according to the first step of **Operation Flow of Still Pie Chart**.

2. Set Chart Properties

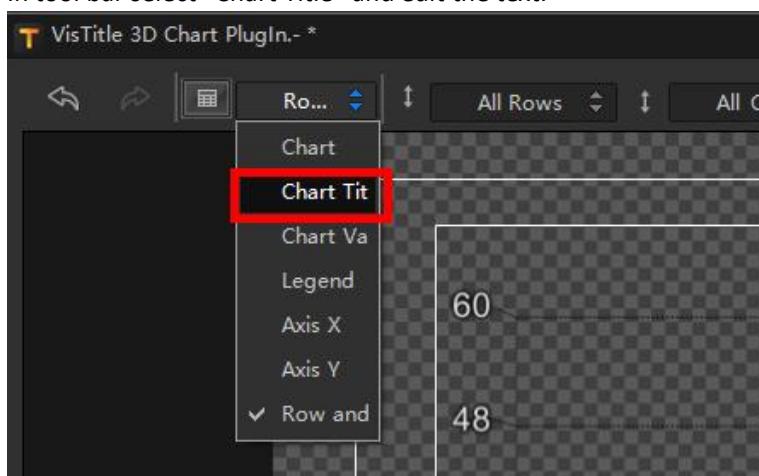

In Chart Properties tab, click the "Column and Bar" button and select "3D Clustered Column".

Set Bar Properties parameters and Chart Properties parameters:

In tool bar select “Chart Title” and edit the text.

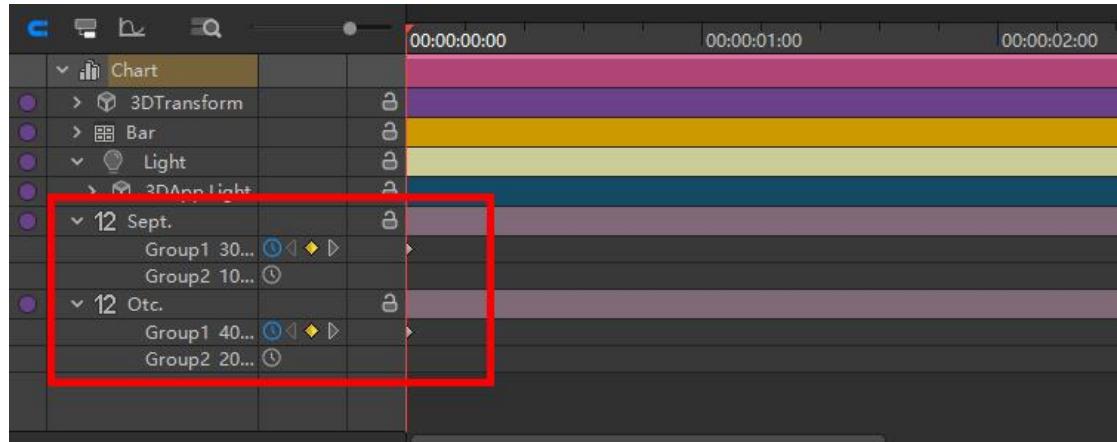

### 3. Create Dynamic Chart

Click "F2" or the "Chart Data Editing" button then Chart Data Window will appear. Edit row headings and column headings in the window.

	Sept.	Otc.			
Group1	300.00	40.00			
Group2	100.00	200.00			

Move timeline to 0 second position, click on "Toggle Animation" buttons of Group 1.

In Chart Data Editing Window change data of Group 1.

	Sept.	Otc.			
Group1	0.00	40.00			
Group2	100.00	200.00			

Move timeline to 1 second position, change data of Group 1 in Chart Data Editing Window.

Chart Data Editing

	Sept.	Otc.			
Group1	150.00	345.00			
Group2	100.00	200.00			

Click on “Toggle Animation” buttons of Group 2.

Change data of Group 2 in Chart Data Editing Window.

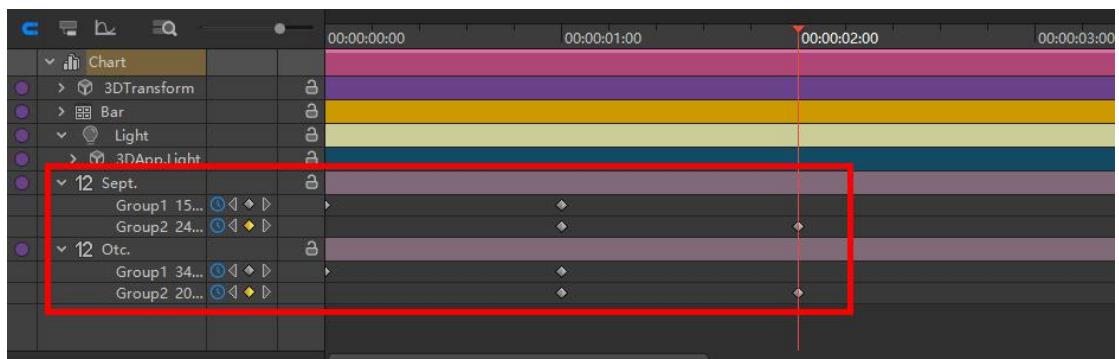

Chart Data Editing

	Sept.	Otc.			
Group1	150.00	345.00			
Group2	0.00	0.00			

Move timeline to 2 second position, change data of Group 2 in Chart Data Editing Window.

**Chart Data Editing**

	Sept.	Otc.		
Group1	150.00	345.00		
Group2	245.00	200.00		

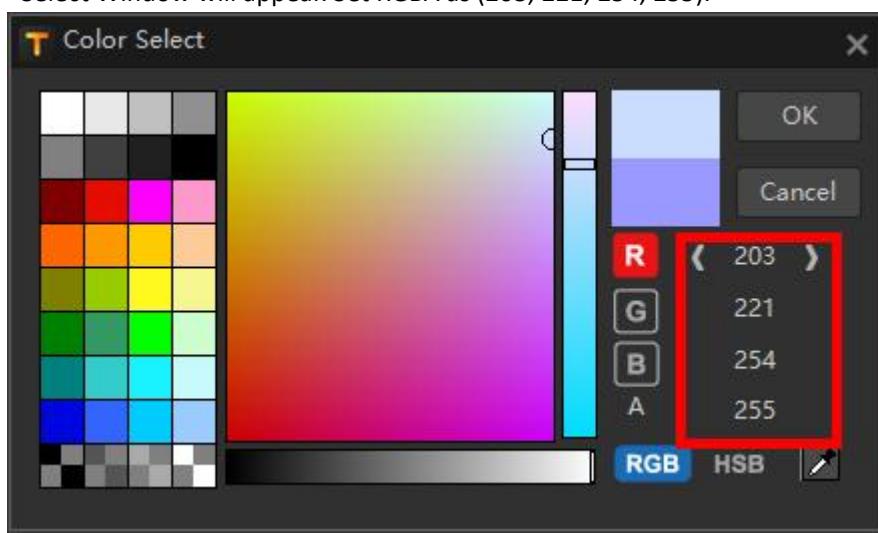

#### 4. Set Axis Properties

In Properties screen click the “Axis Properties” button to open the Axis Properties tab.

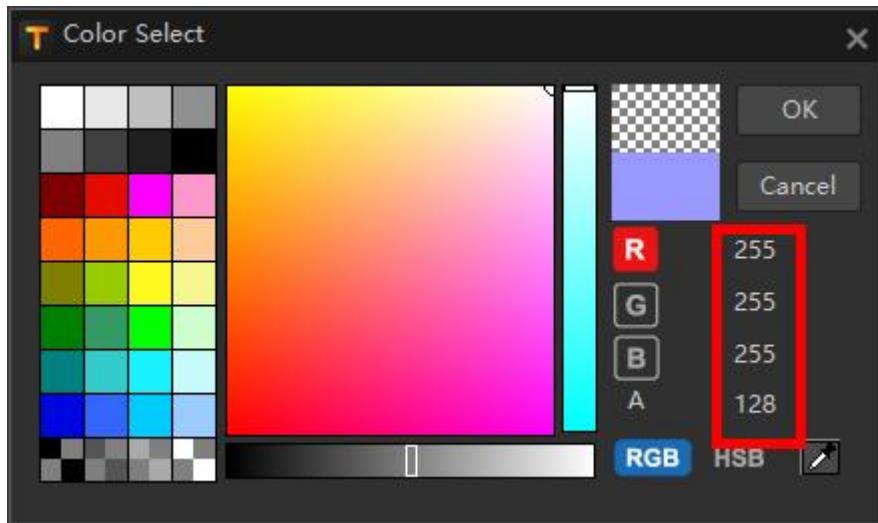

In Axis Y Properties screen enable “Axis Plane” and click the button behind, Color

Select Window will appear. Set RGBA as (203, 221, 254, 255).

In Axis X Properties screen enable “Axis Plane” and click the button behind, Color

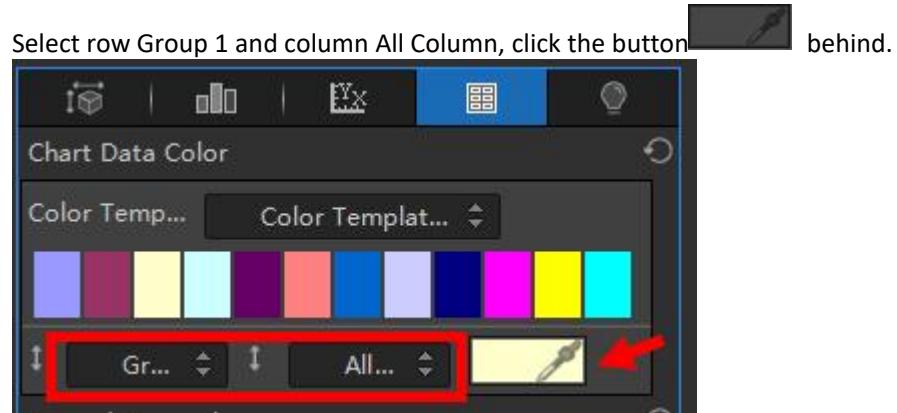

Select Window will appear. Set RGBA as (255, 255, 255, 128).

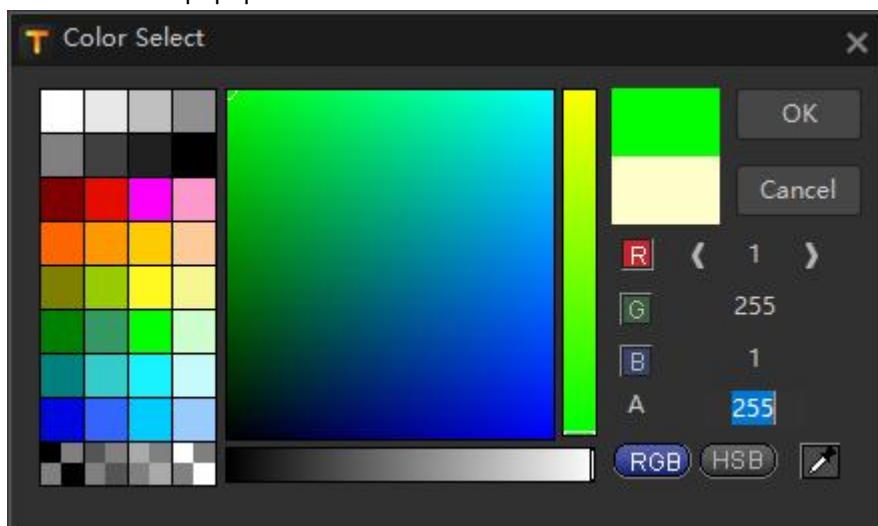

Set other parameters as the default.

##### 5. Set Chart Miscellaneous Properties

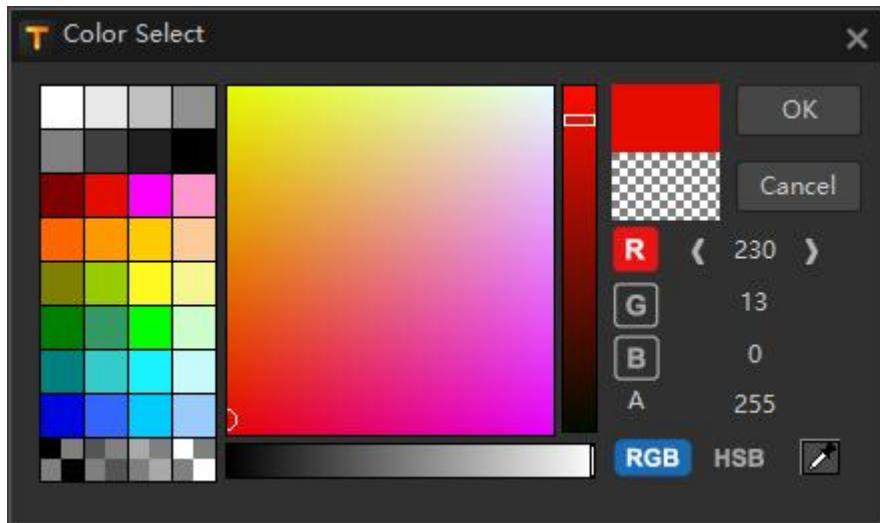

Set Chart Data Color in Chart Miscellaneous Properties Tab

Set color in the popup Color Select Window.

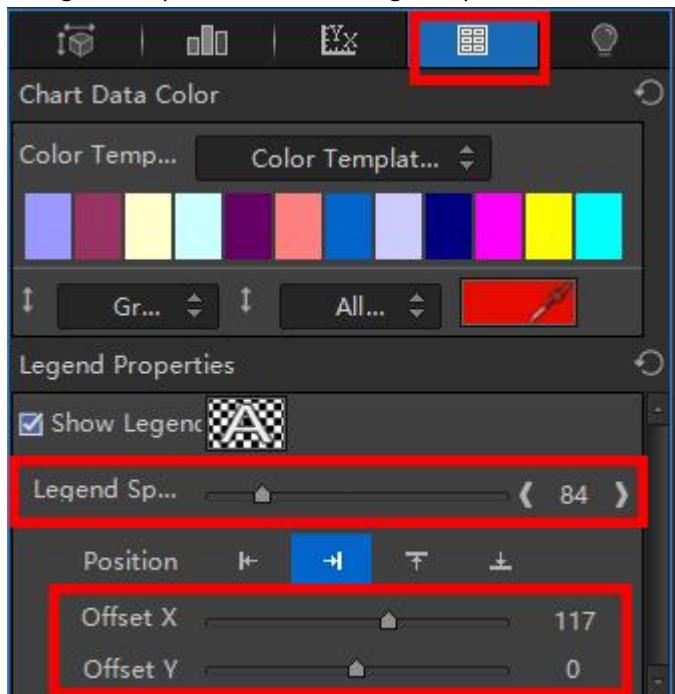

Select row Group 2 and column All Column, click the button behind. Then set RGBA value or choose one of the 32 preset colors in the popup Color Select Window.

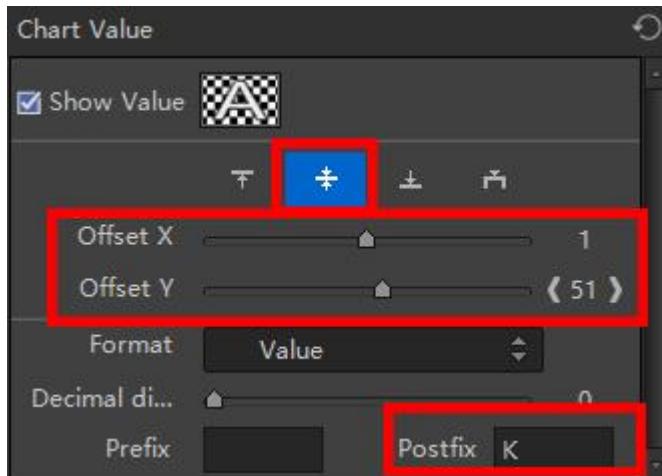

Set Legend Properties Parameters in Chart Miscellaneous Properties Tab

In Legend Properties screen set legend space as 84, Offset X value as 117 and Offset Y value as 0.

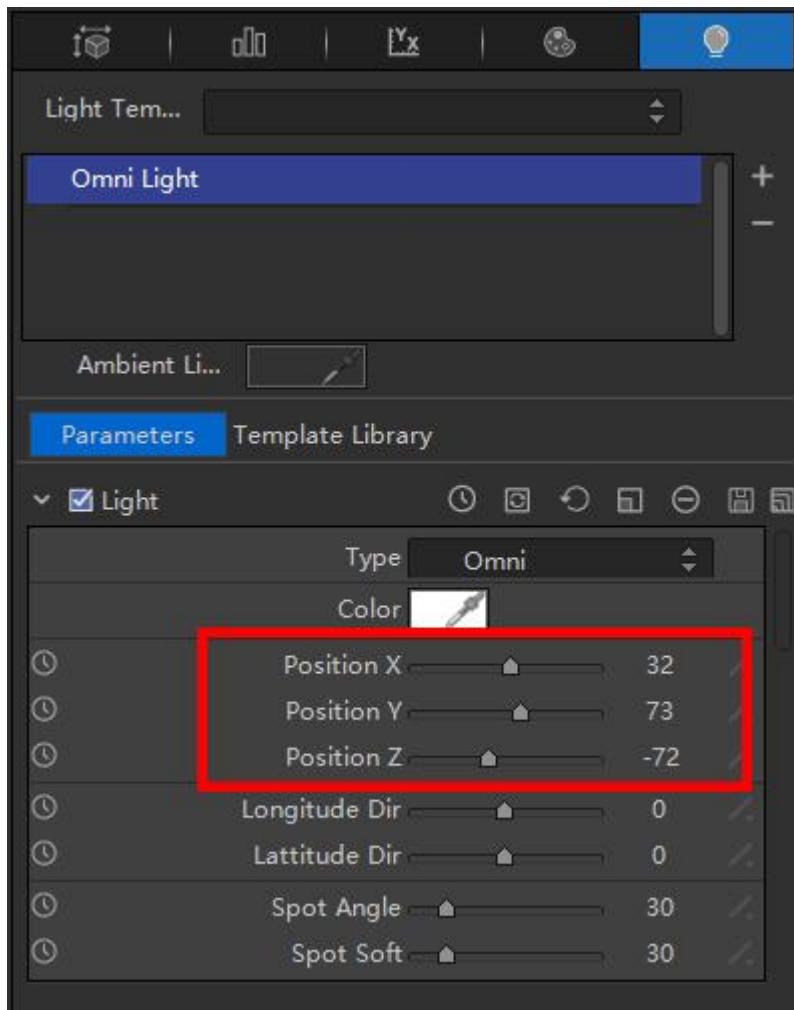

Set Chart Value Parameters in Chart Miscellaneous Properties Tab

In Chart Value screen set Chart Value position as Middle, Offset X value as 1, Offset Y value as 51 and Postfix as K.

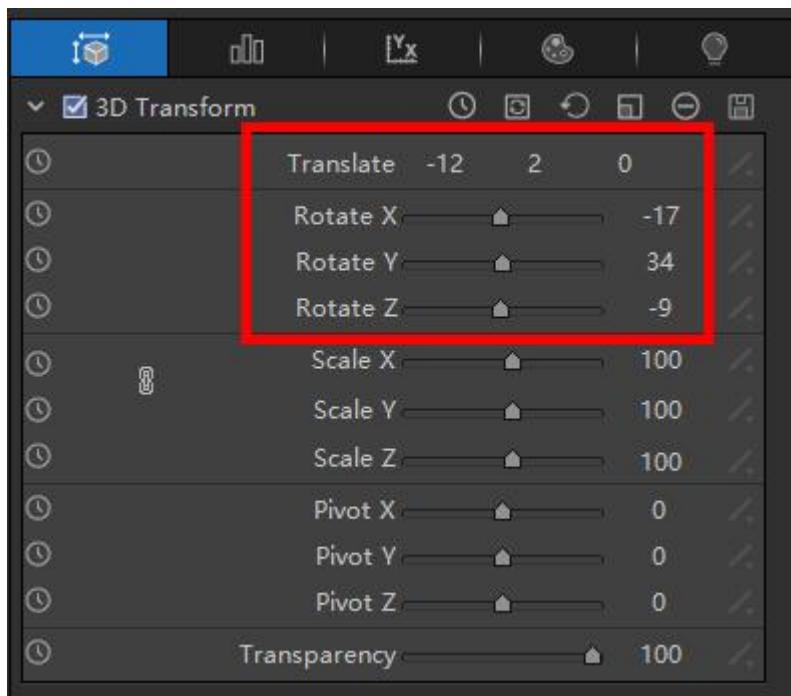

#### 6. Set Light Properties

In Light Properties tab open Parameters screen. Set Position X value as 32, Position Y value as 73 and Position Z value as -72.

#### 7. Set 3D Transform Parameters

In 3D Transform tab set Translate value as (-12, 2, 0), Rotate X value -17, Rotate Y value 34 and Rotate Z value -9.

# Chapter Thirteen Some Questions and the Answers

## 13.1. How to Change Parameter Value

Parameter Type 1

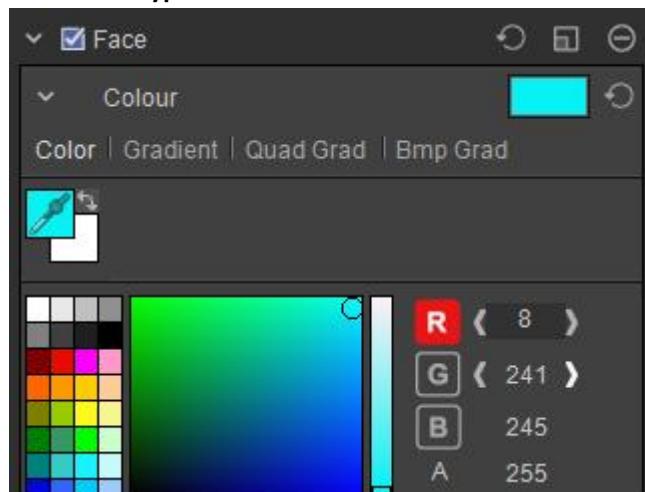

To set parameters:

Method 1: move cursor over the field and left click then enter numbers.

Method 2: move cursor over the field then press the left mouse button and drag right or left.

Parameter Type 2

To set parameters:

Method 1: move cursor over the field and left click then enter numbers.

Method 2: move cursor over the field then press the left mouse button and drag right or left.

Method 3: move cursor over the field then click on "<, >".

Parameter Type 3

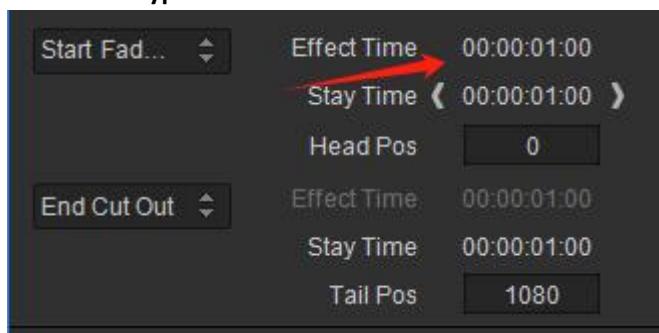

Set parameters by:

Method 1: Dragging the slide marked in green in the image above

Method 2: please refer to **Parameter Type 2** about other methods.

#### Parameter Type 4

Set parameters by:

Method 1: moving cursor over the field then click on “<, >”

Method 2: Dragging the cursor over the field.

Method 3: moving cursor over the field and left click then enter numbers.

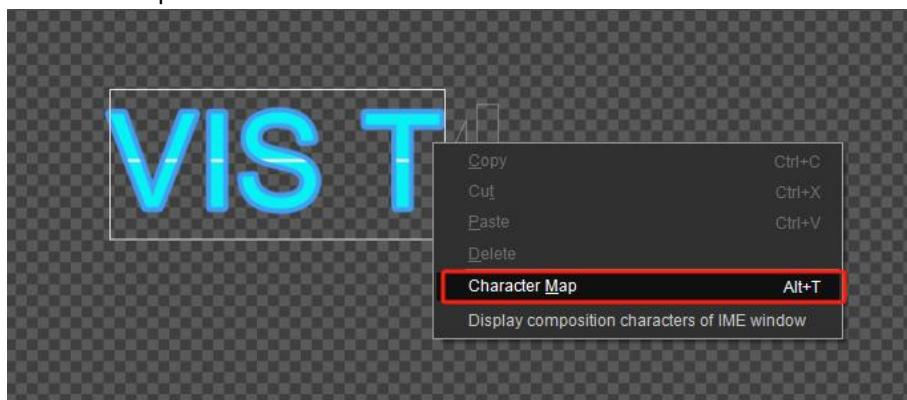

**Note:** you can double click parameters value in text to make them default.

## 13.2. How to Enter Special Characters

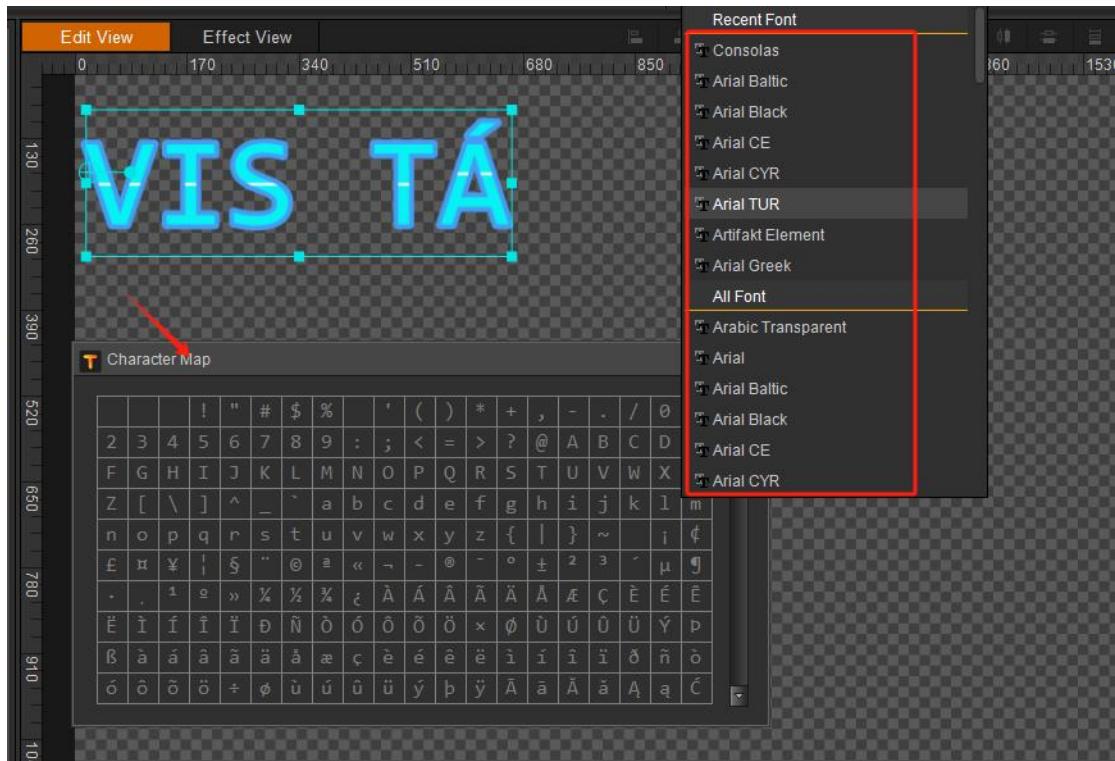

You can enter special characters for text object, curve object and morph object.

### To enter special characters:

- After creating a text object, right click in text and choose "Character Map" from the context menu or press Alt+T.

- Each font type has the corresponding characters in Character Map window. Select a font then click the desired character in the Character Map window.

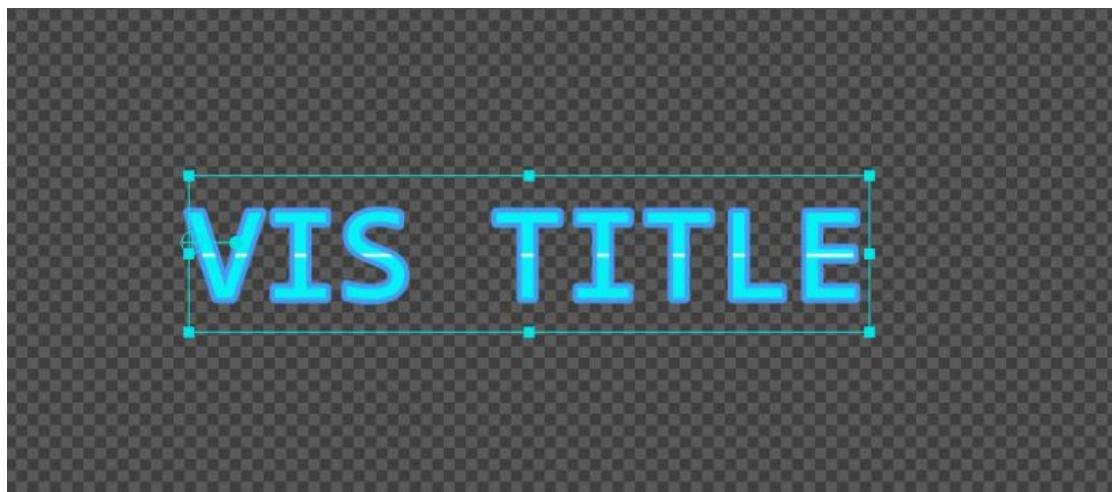

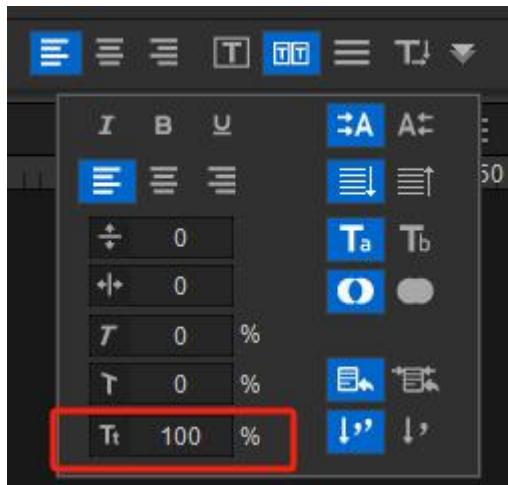

### 13.3. How to Convert Character Case

You can convert lower case to upper case by using the Small Caps.

1. Click to select text.

2. Click the "Hide/Show Font AdvProps" button in tool bar then set Small Caps value as 100.

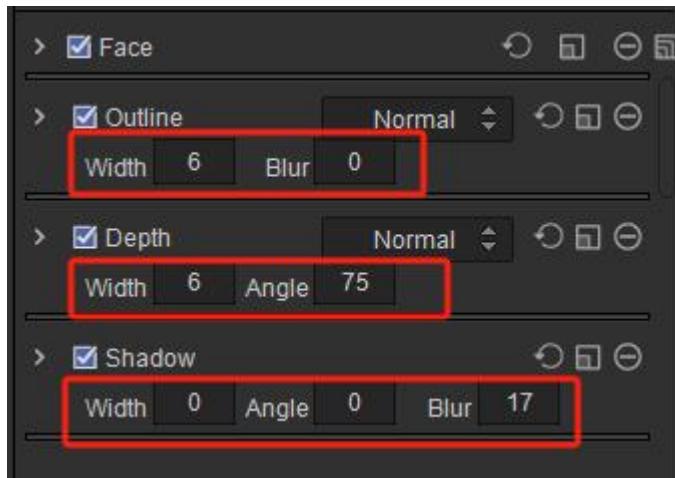

### 13.4. How to Scale Shader Style Parameter

By using the Scale ShaderStyle Parameter, you can scale all shader parameters of Face, Outline, Shadow, etc simultaneously.

1. Click the selected object including face, outline and so on.

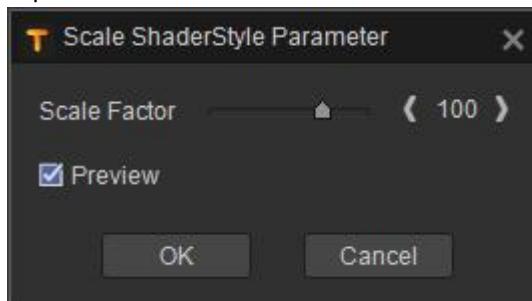

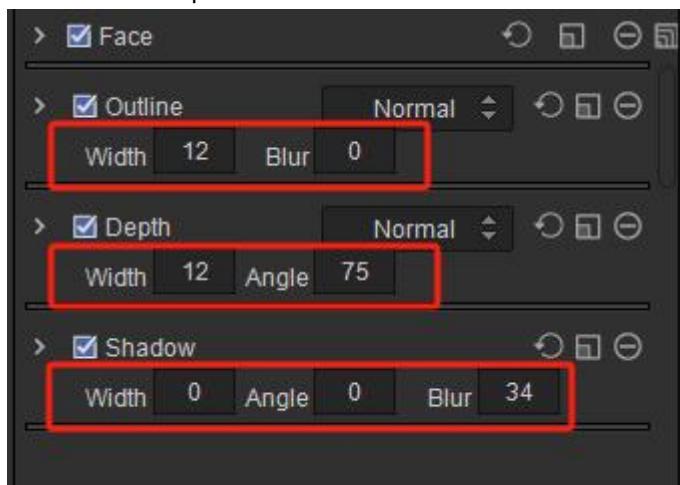

2. Right click the object then select "Scale ShaderStyle Parameter" from the context menu.

Set Scale Factor parameter in the Scale ShaderStyle Parameter window. The maximum is 200 and minimum is -200. You must convert the value to percentage, thus the shader parameter value will triple or reduce twice at most.

Set Scale Factor parameter as 100 then click the "OK" button.

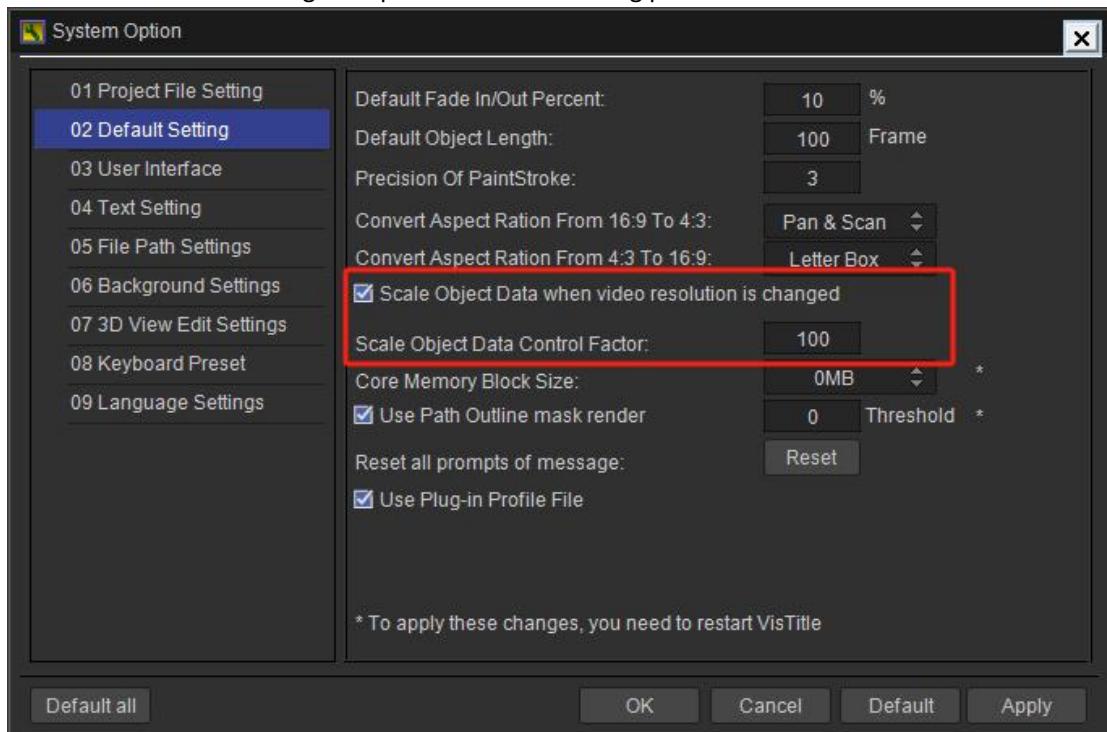

Example:

### 13.5. Scale Object Data When Video Resolution Is Changed

1. Click the “System Option” button in state bar, the System Option window will appear. Then select “Default Setting” to open the Default Setting panel.

2. Check “Scale Object Data when video resolution is changed” and change the Scale Object Data Control Factor parameter value.
3. Click the “Apply” button and then restart VisTitle to apply the change.

### 13.6. How to Hotkey Process Special Language

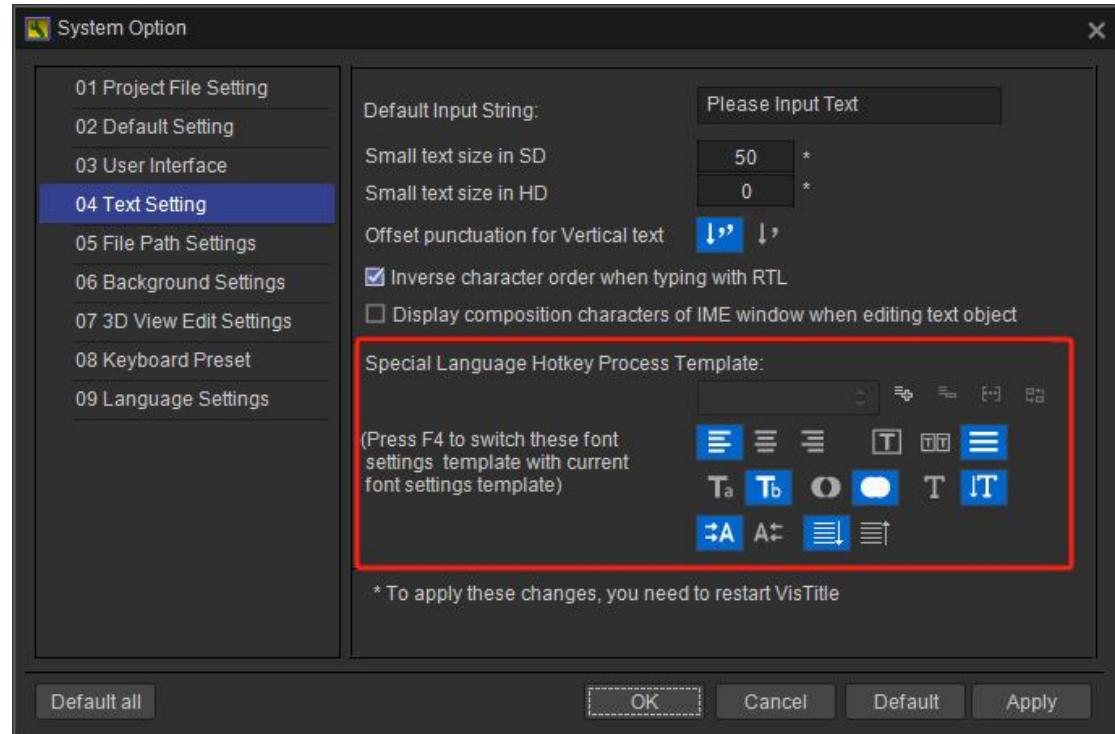

After launching VisTitle, you can press **F4** to switch current font settings with the special language font settings.

To set special language font settings:

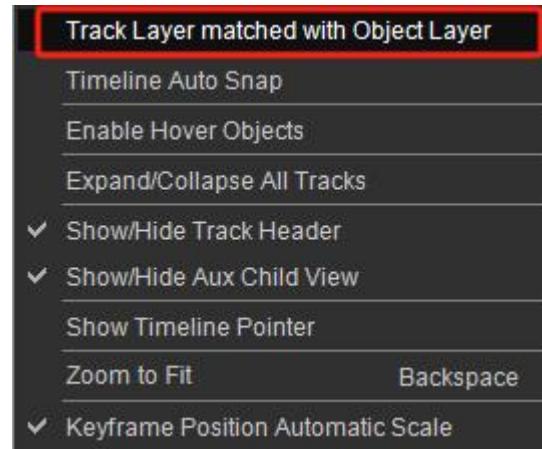

1. Click the “System Option” button in state bar, the System Option window will appear.
2. Then select “Text Setting” to open the Text Setting panel.

3. Select font settings in the panel.

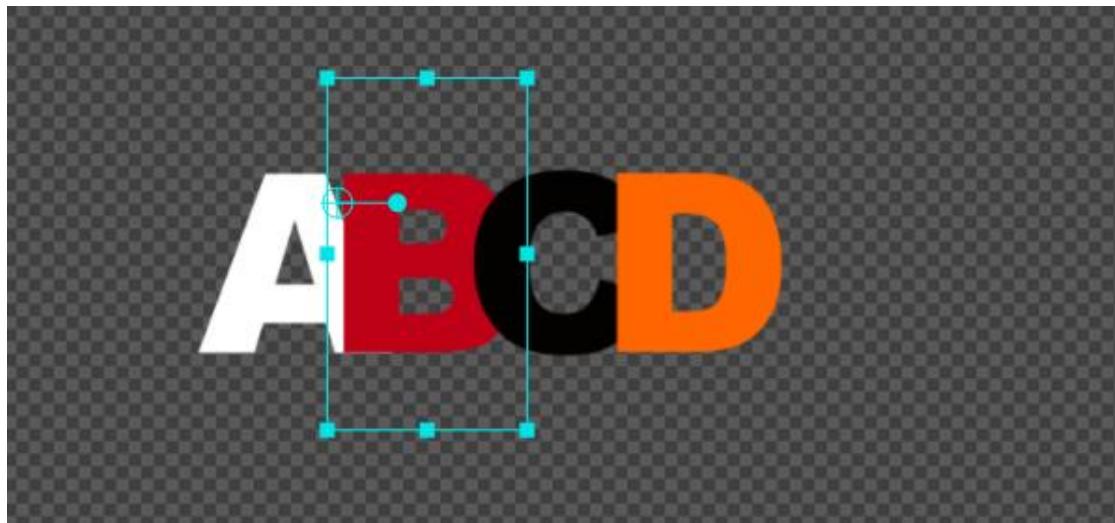

## 13.7. Change Arrangement of Timeline Clips

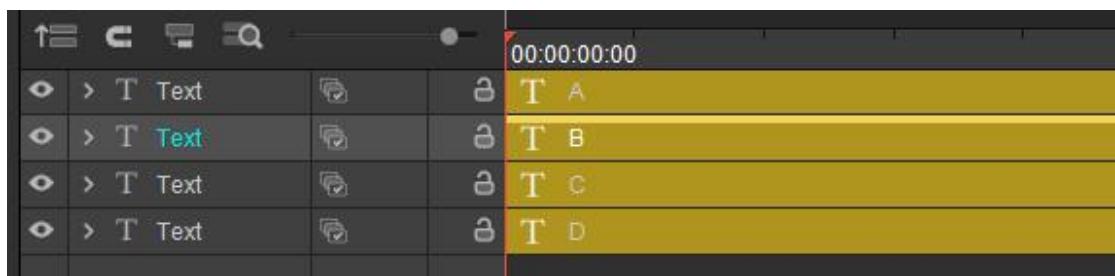

Clip arrangement on timeline is different due to different softwares. For those used to clip arrangement on timeline in After Effects, you can custom clip arrangement on timeline in VisTitle. Right click at the head of all tracks to enable or close “Track Layer Matched with Object Layer” option. The position of objects in editing area won’t change as the option changes.

Objects arrangement and layers are shown as below. Text A, B, C, D correspond to the creating order as A, B, C, D.

The following pictures are with the clip arrangement on timeline off and on. Close “Track Layer Matched with Object Layer” option:

Enable “Track Layer Matched with Object Layer” option, (similar arrangement with After Effects).
